

Evidence-led planning: one belt, three cores, two wings

FIG. 01

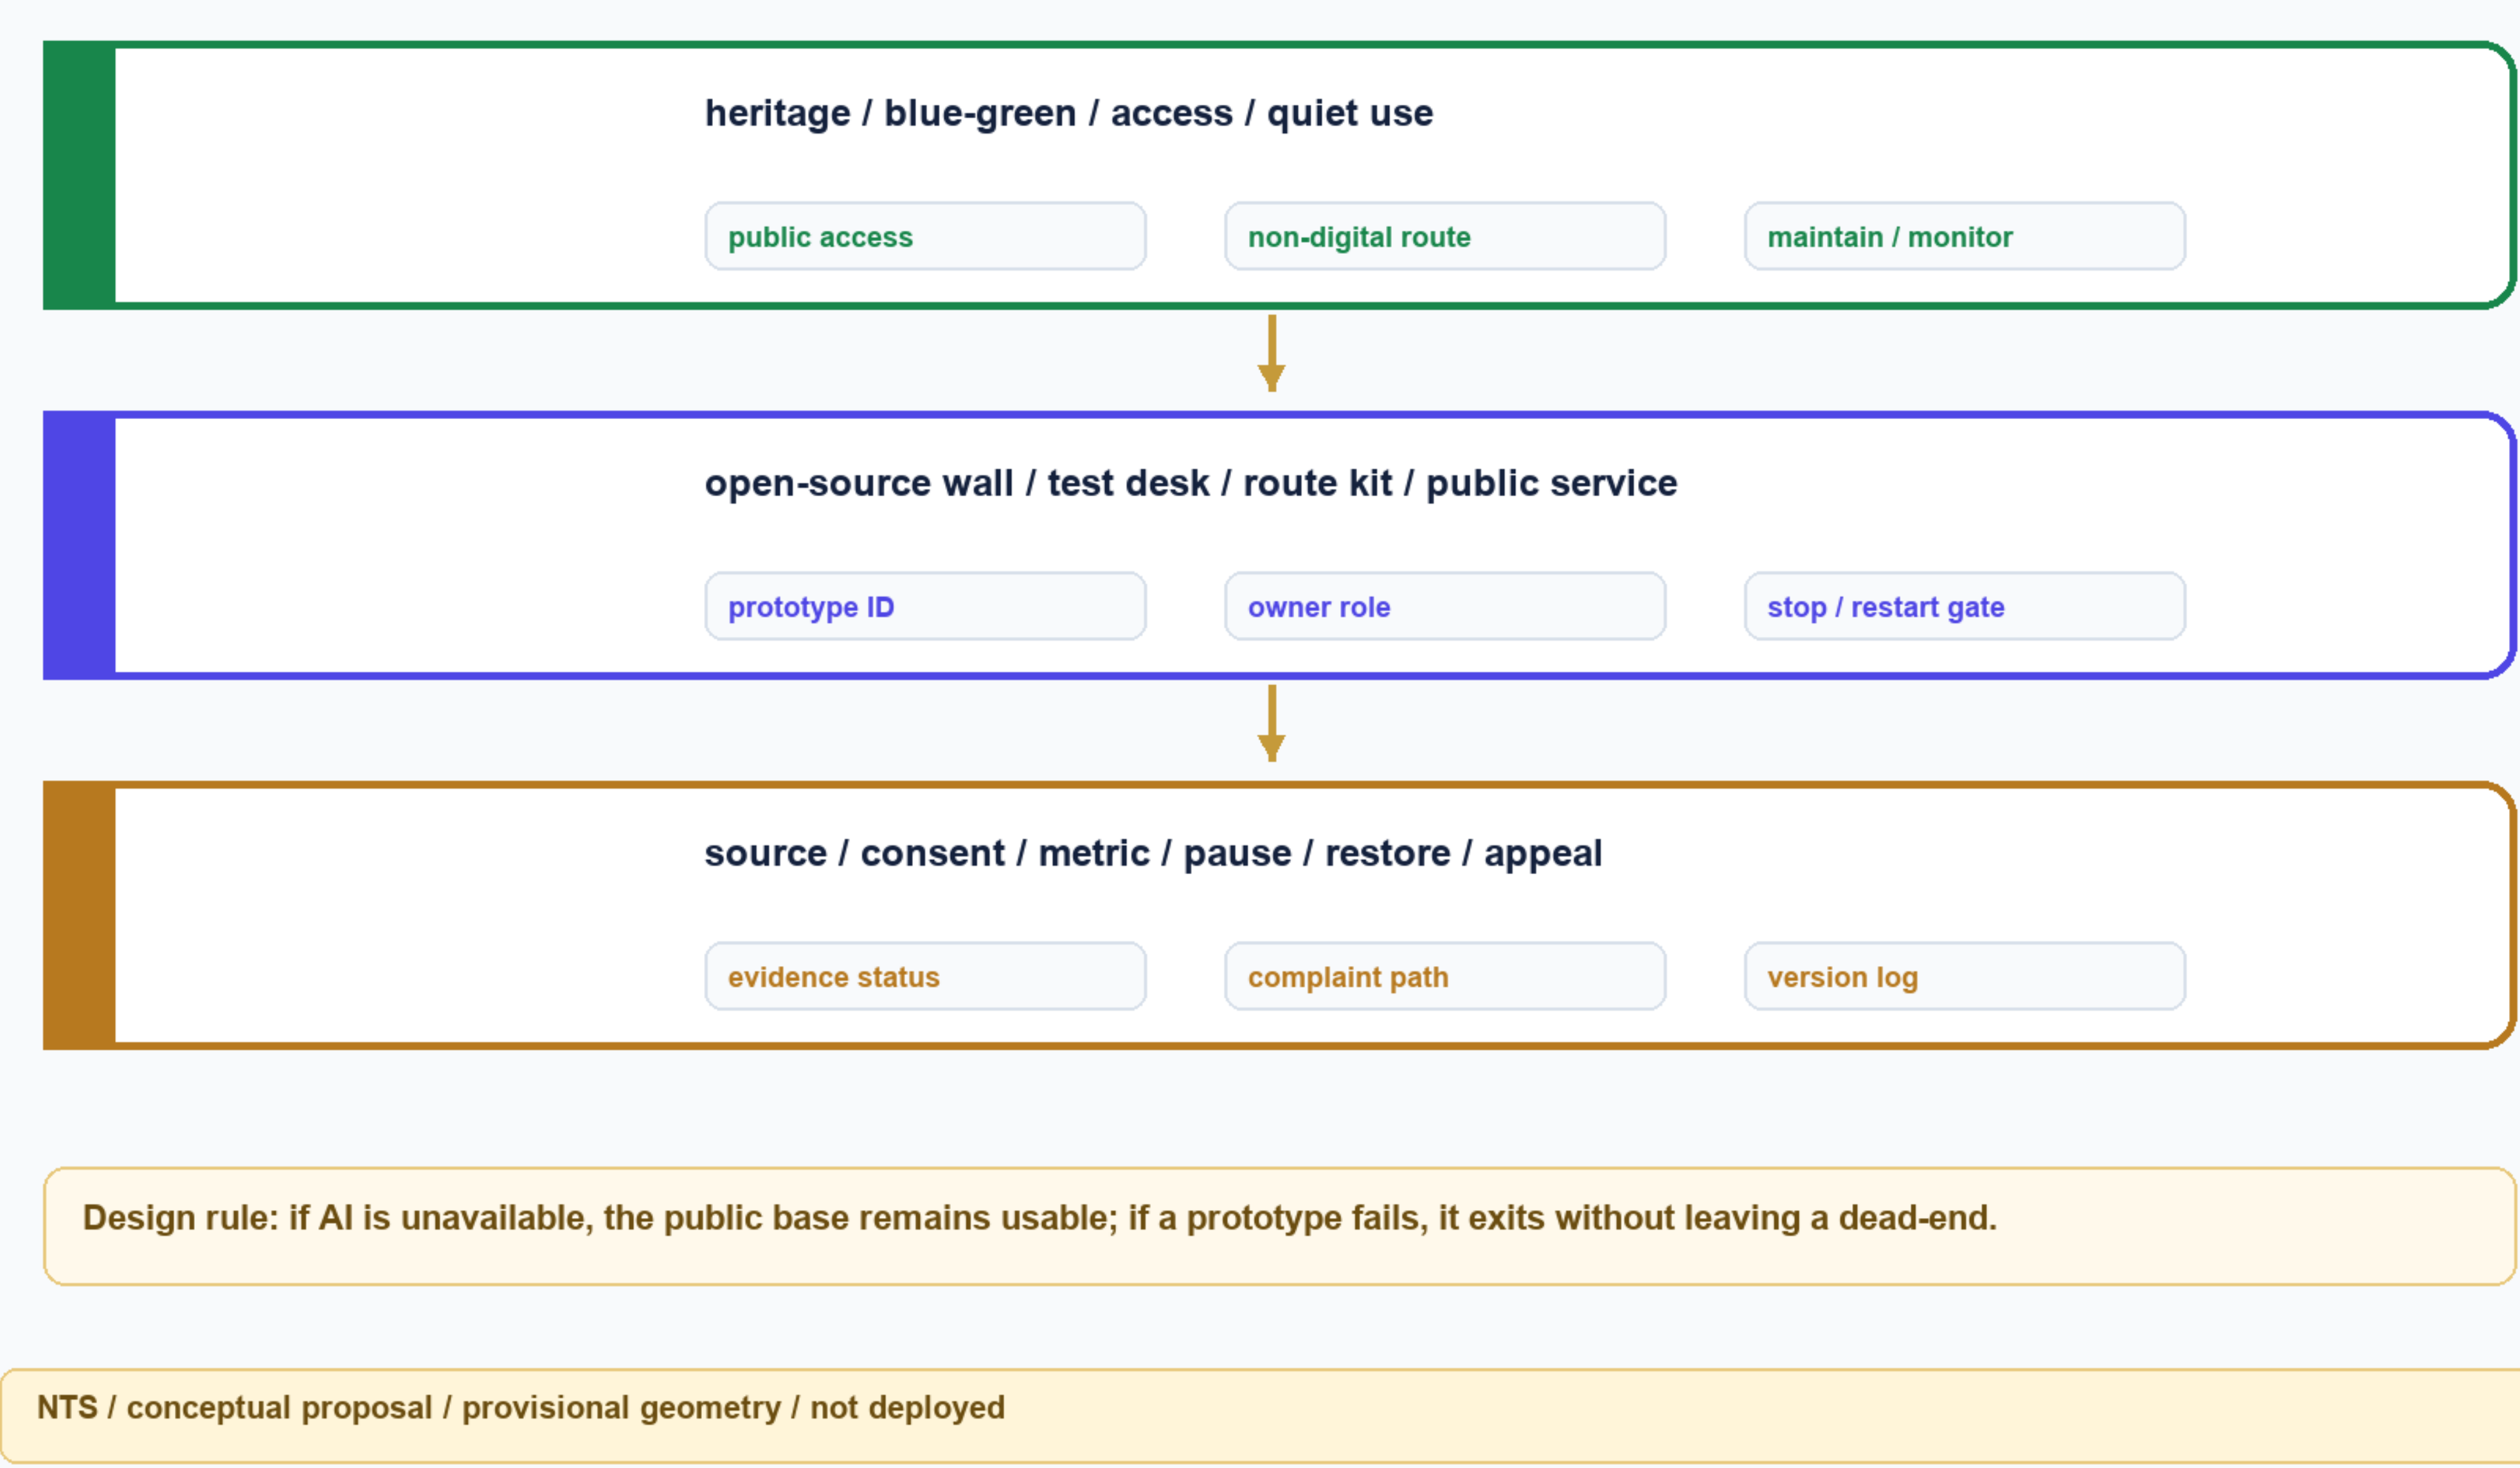

Relationship diagram, not a statutory map. The same IDs feed the report, JSON, HTML and review gates.

Stable public base + reversible scenarios + human takeover

FIG. 02

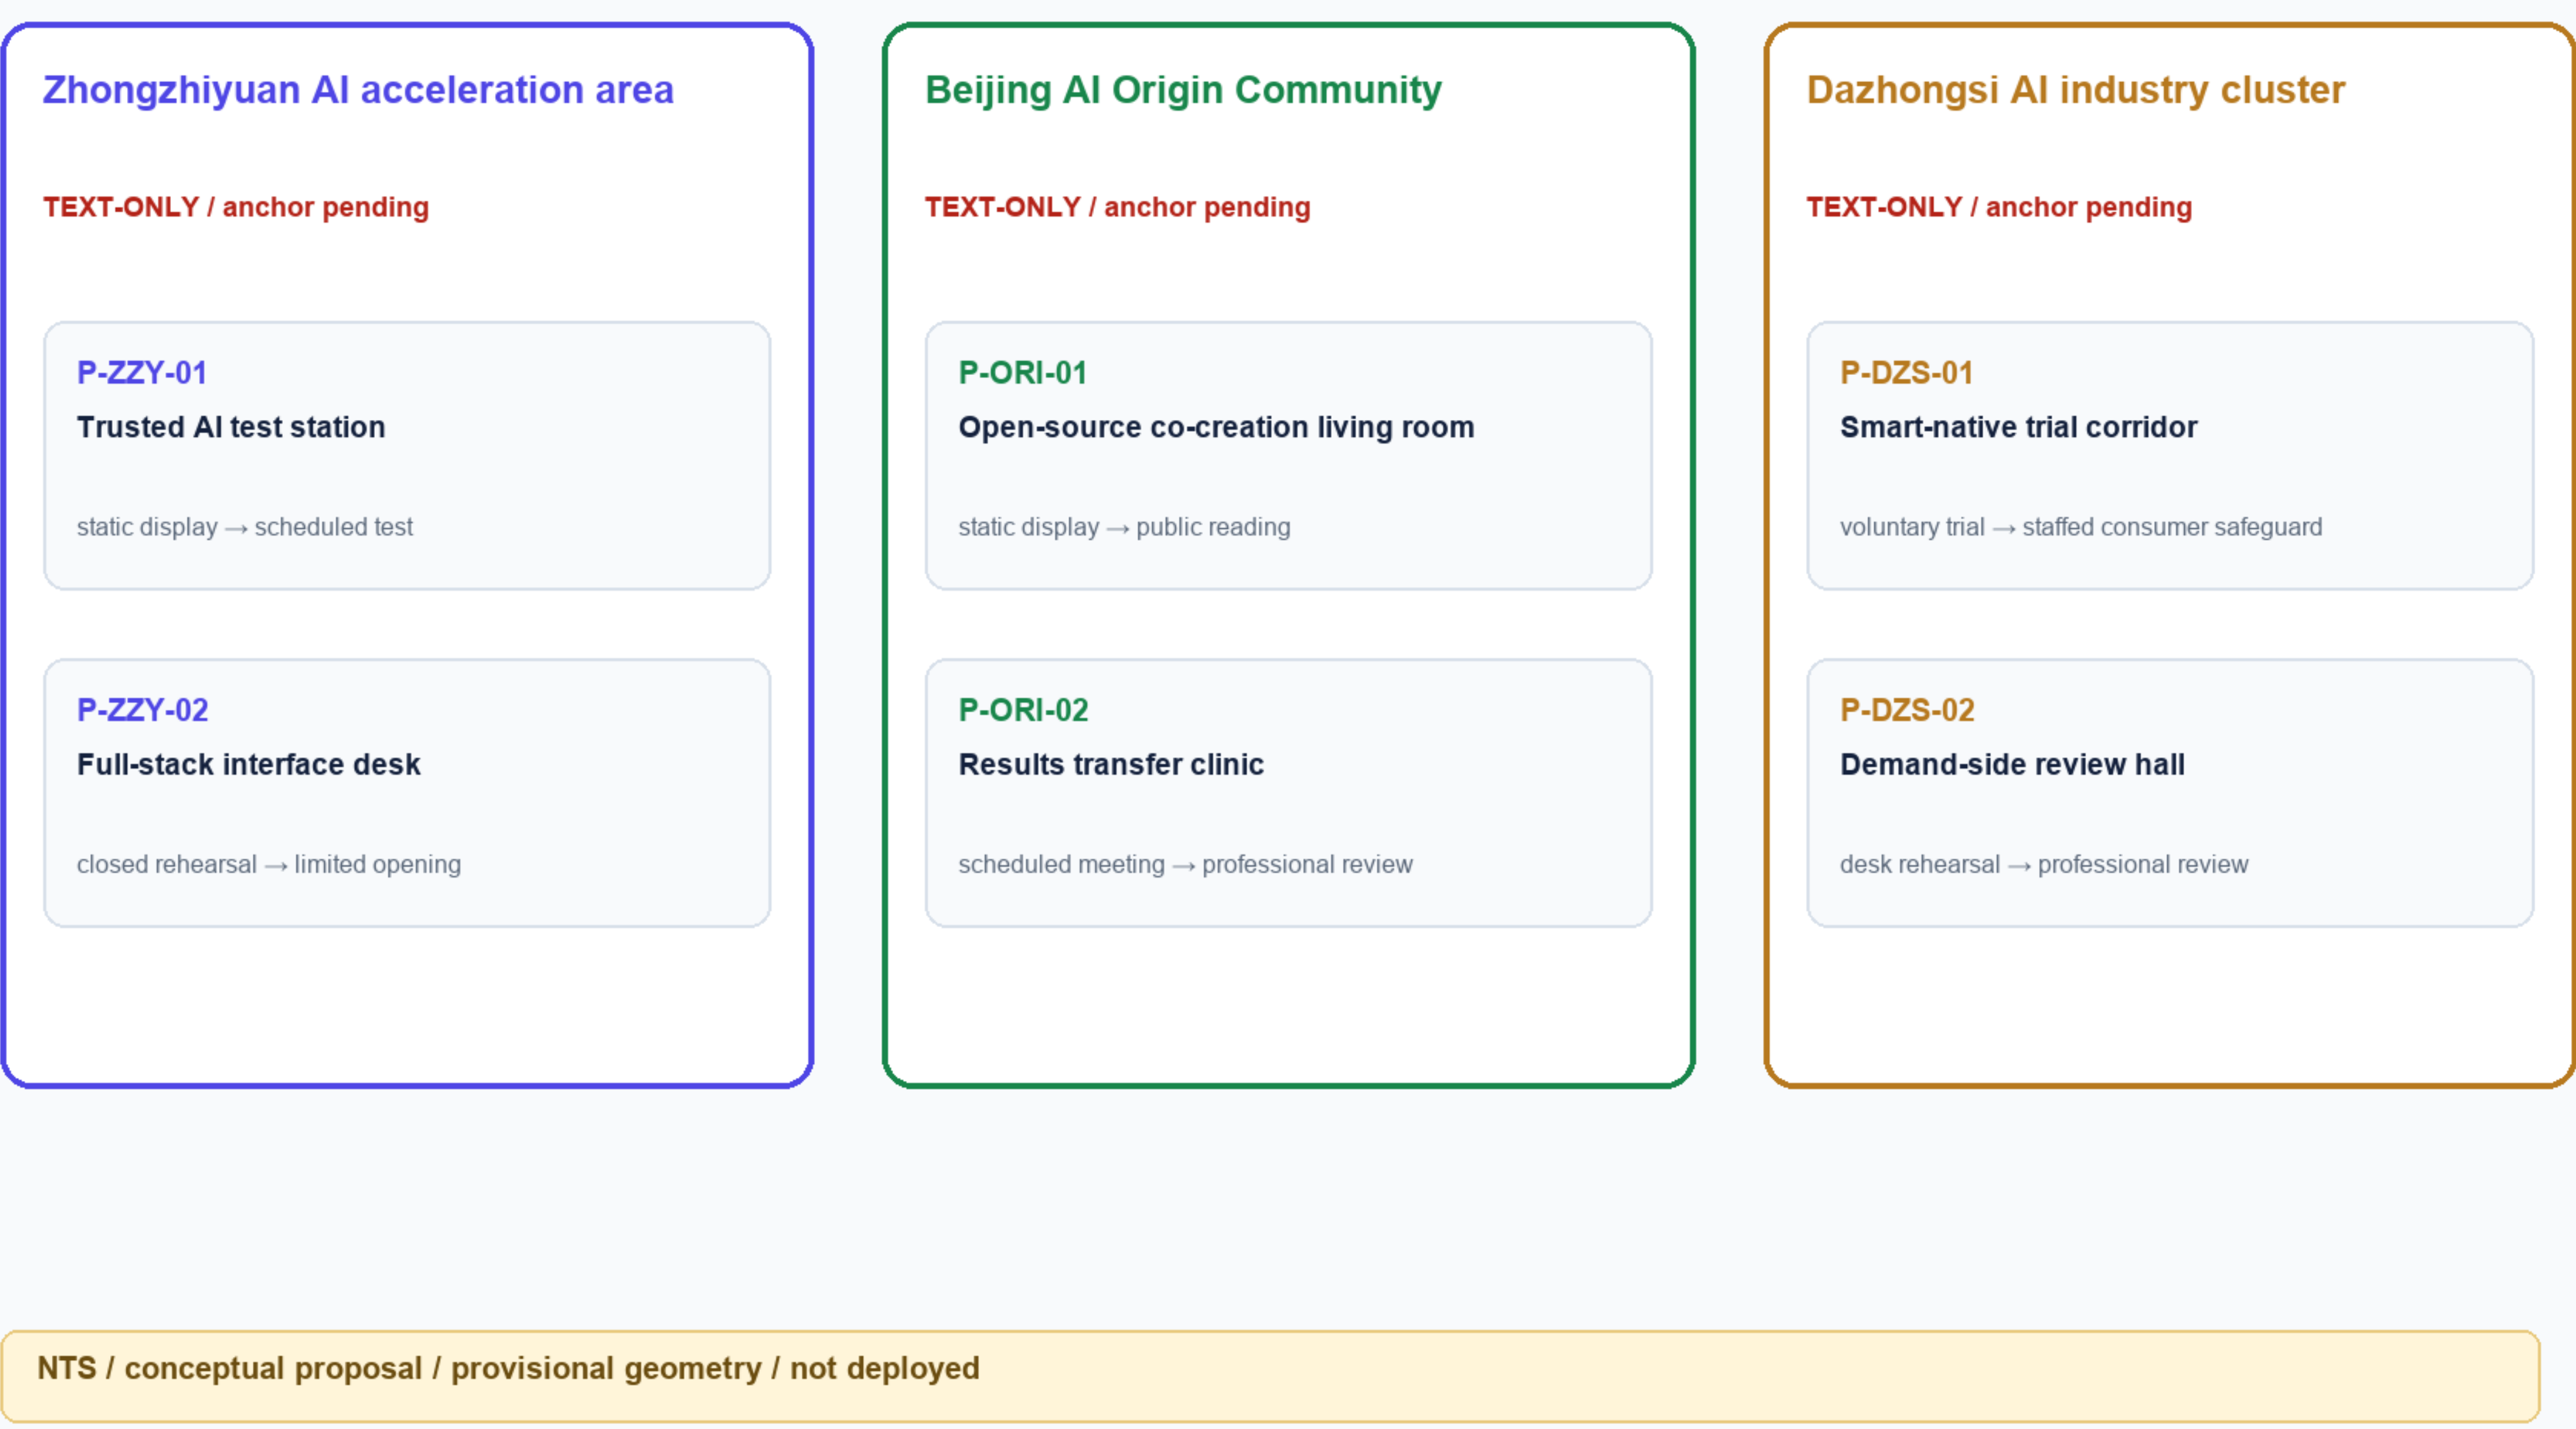

AI-native planning changes the unit of design from a fixed facility to a versioned, stoppable service bundle.

Three focus areas × six first moves

FIG. 03

Each point is a service/spatial prototype with a clear status, not an unverified site placement.

SIX TASKS / 六类任务

- Concept
- Ecosystem
- Scenarios
- Landmarks
- Culture
- Operations

Mobility, blue-green and public-service continuity

FIG. 04

A service blueprint avoids drawing a road alignment before official transport and park data are supplied.

USER JOURNEY

Mobility layer

walking / bicycle / transit / accessible path
known / unknown / next evidence

Blue-green layer

rail heritage / stream / shade / rest
known / unknown / next evidence

Public-service layer

paper route / staffed desk / quiet fallback
known / unknown / next evidence

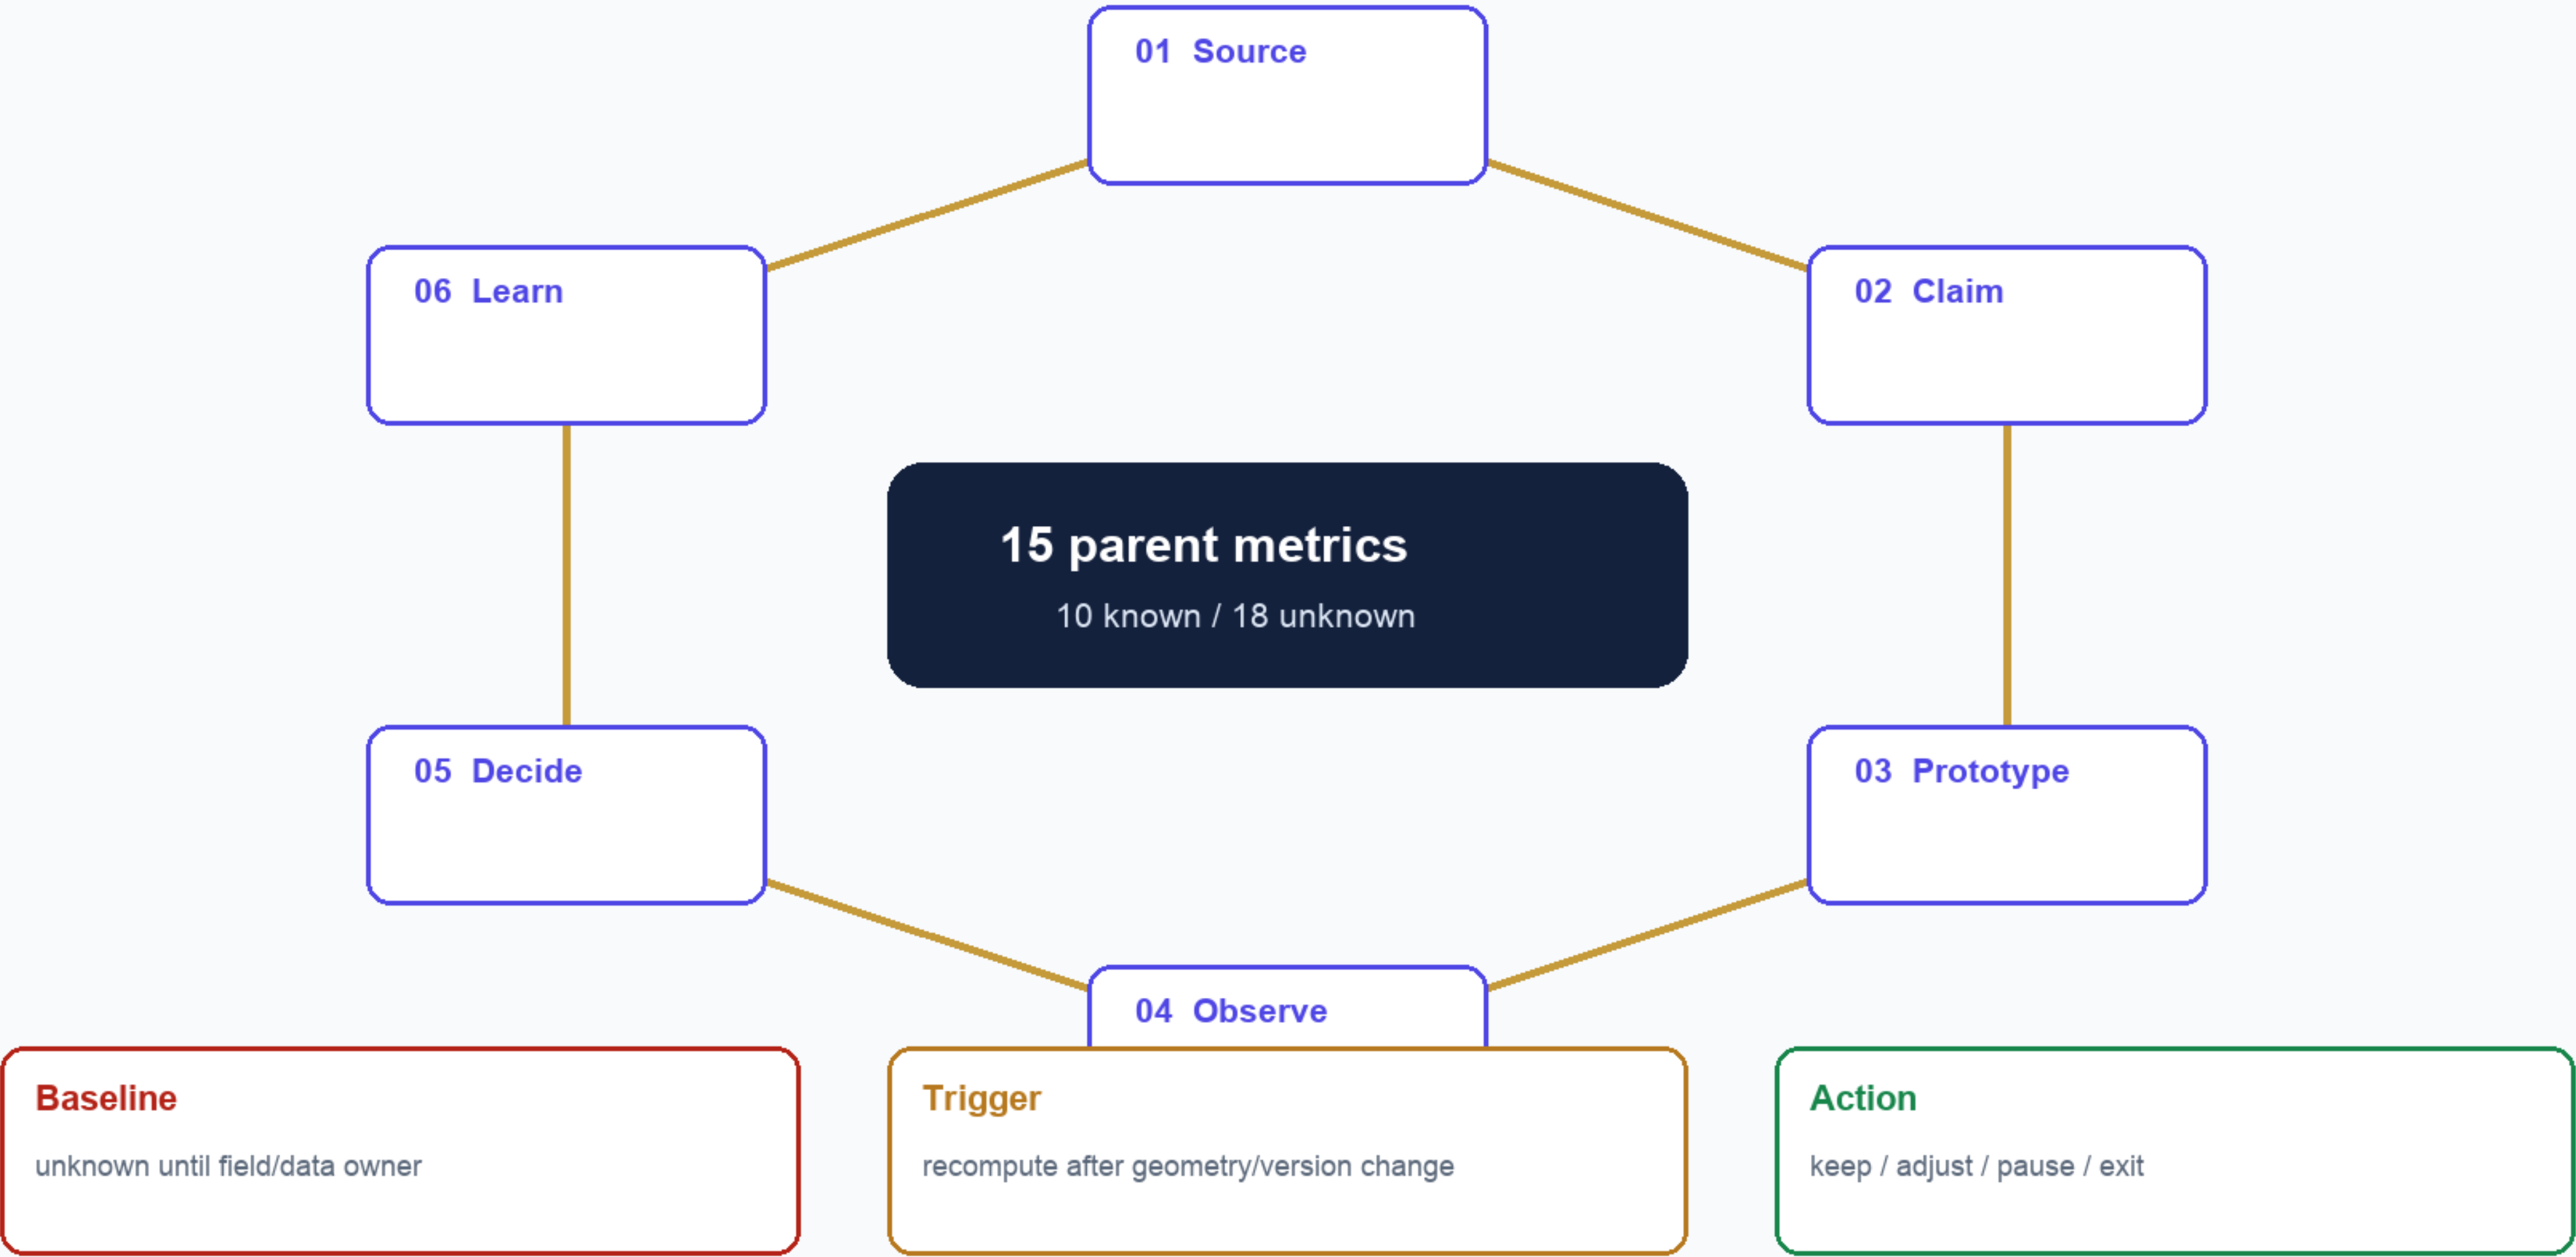

No station, road, park or heritage boundary is inferred from this diagram.

NTS / conceptual proposal / provisional geometry / not deployed

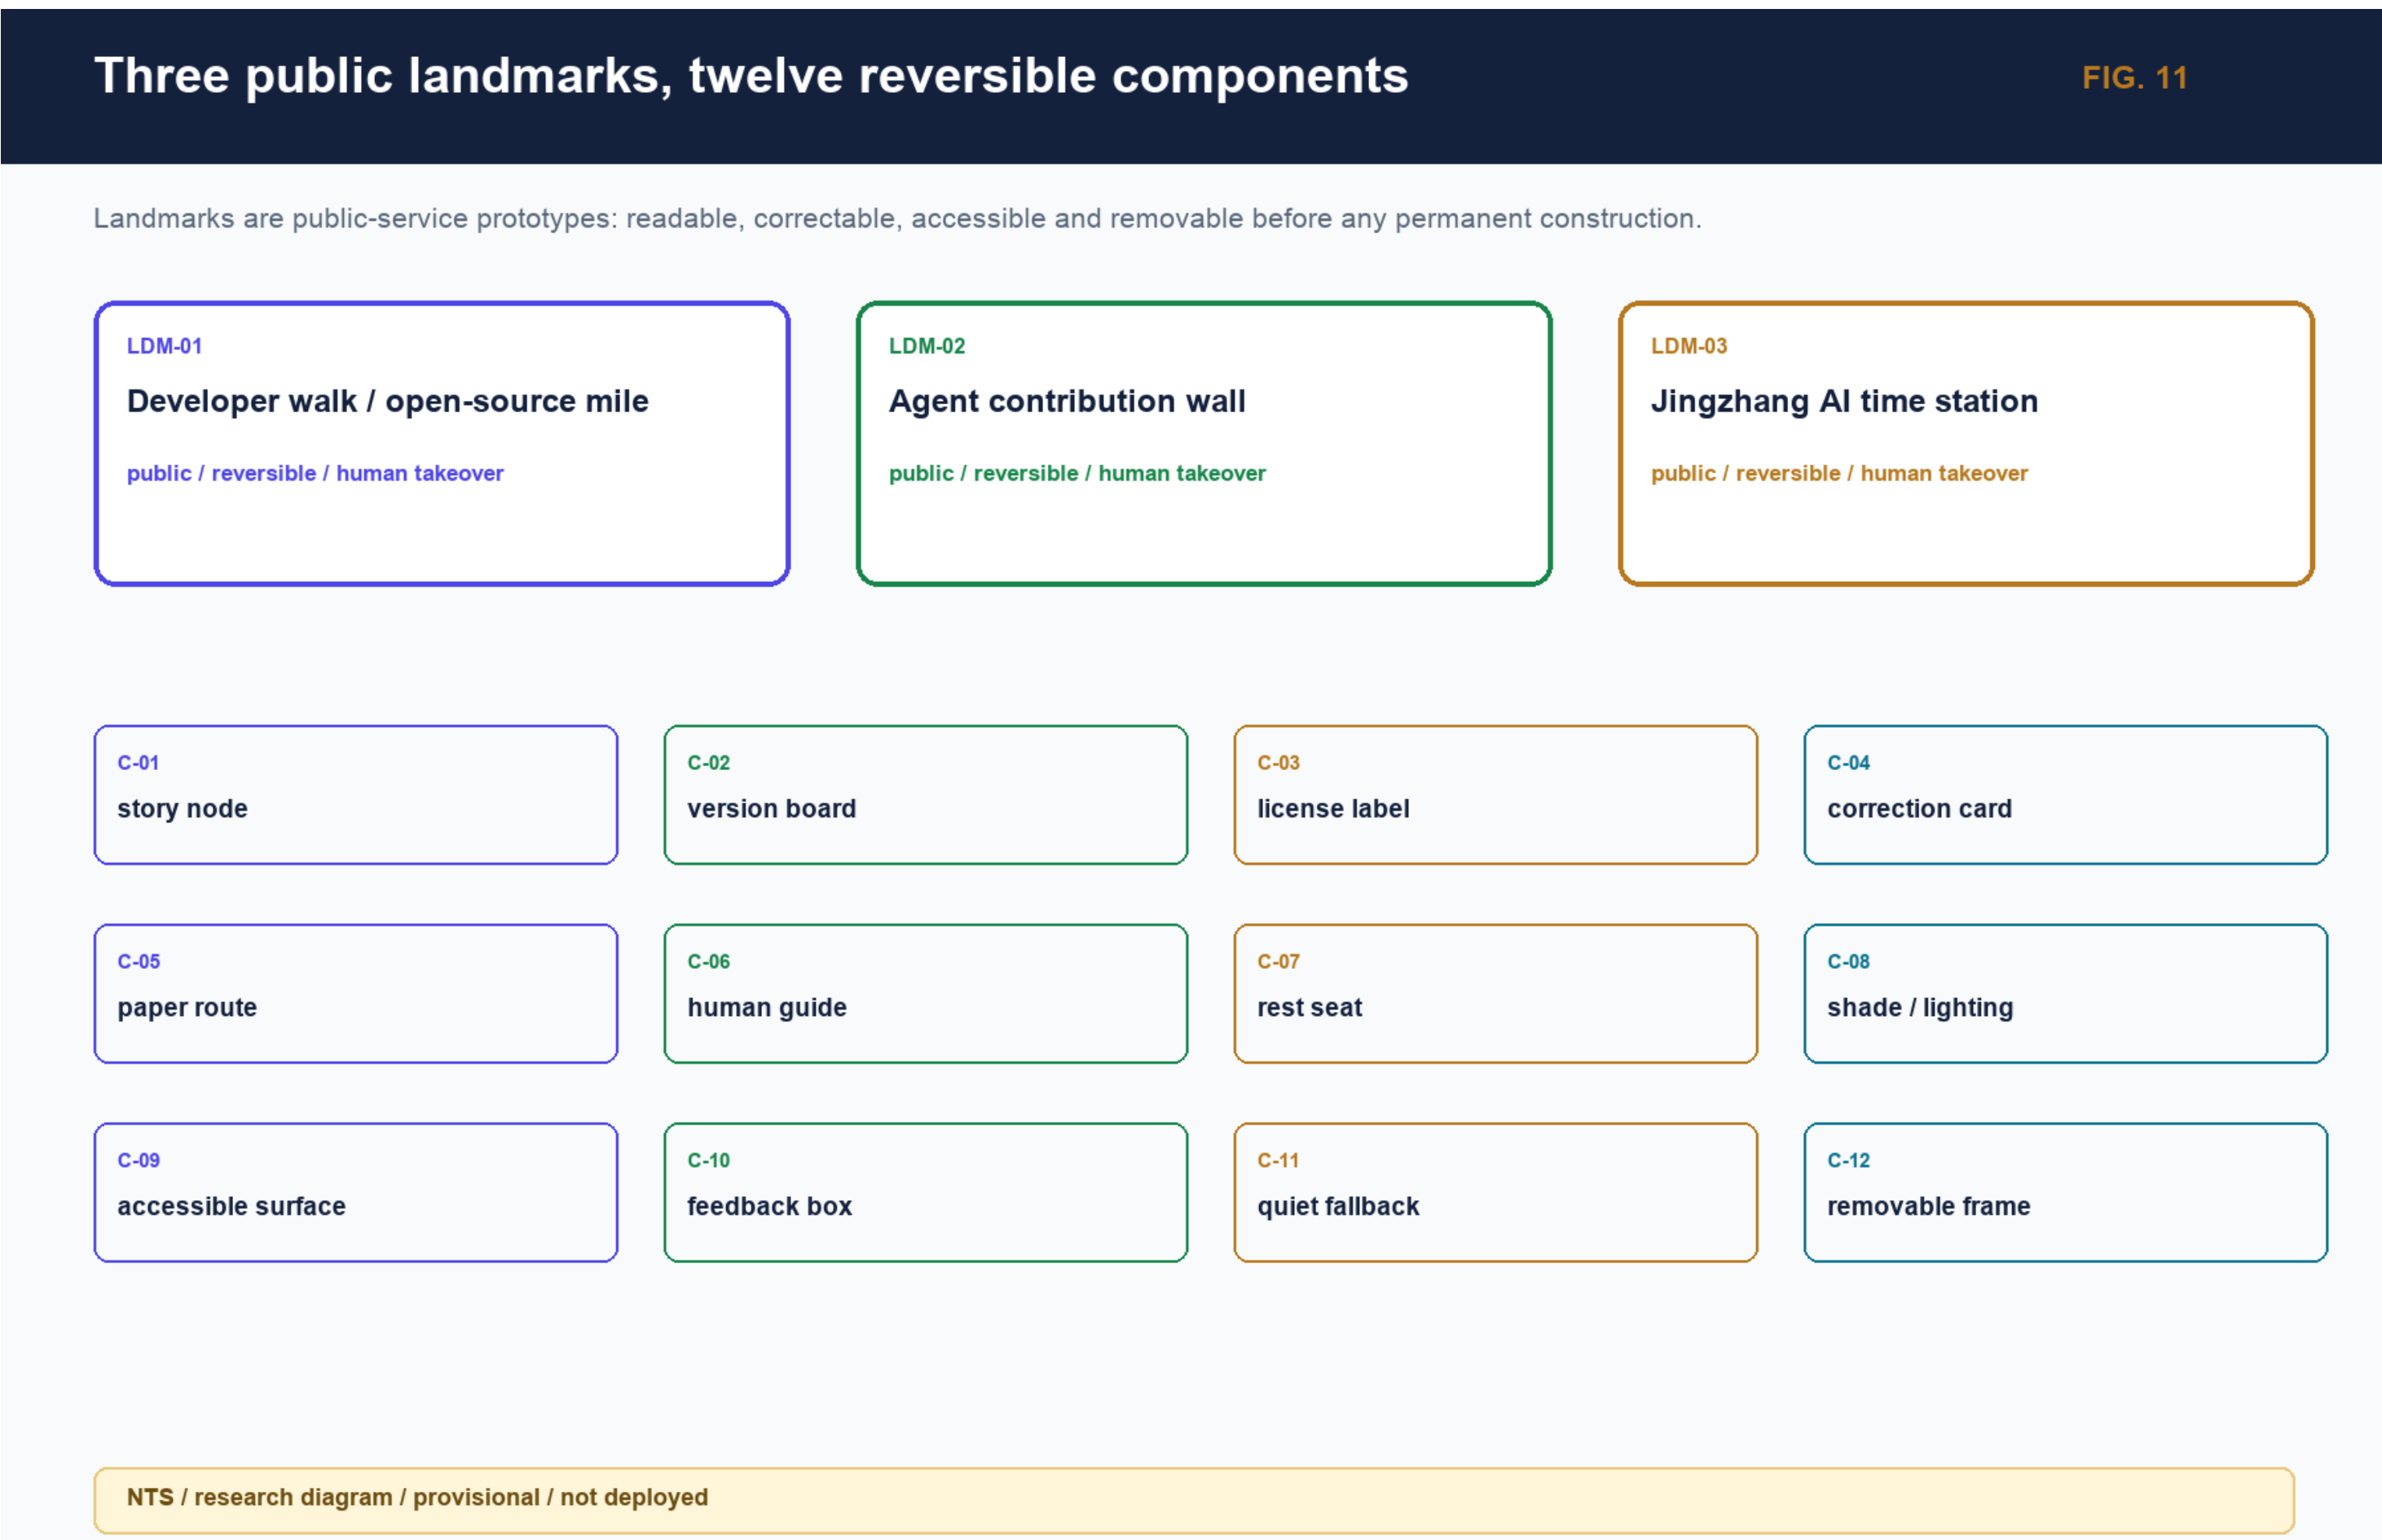

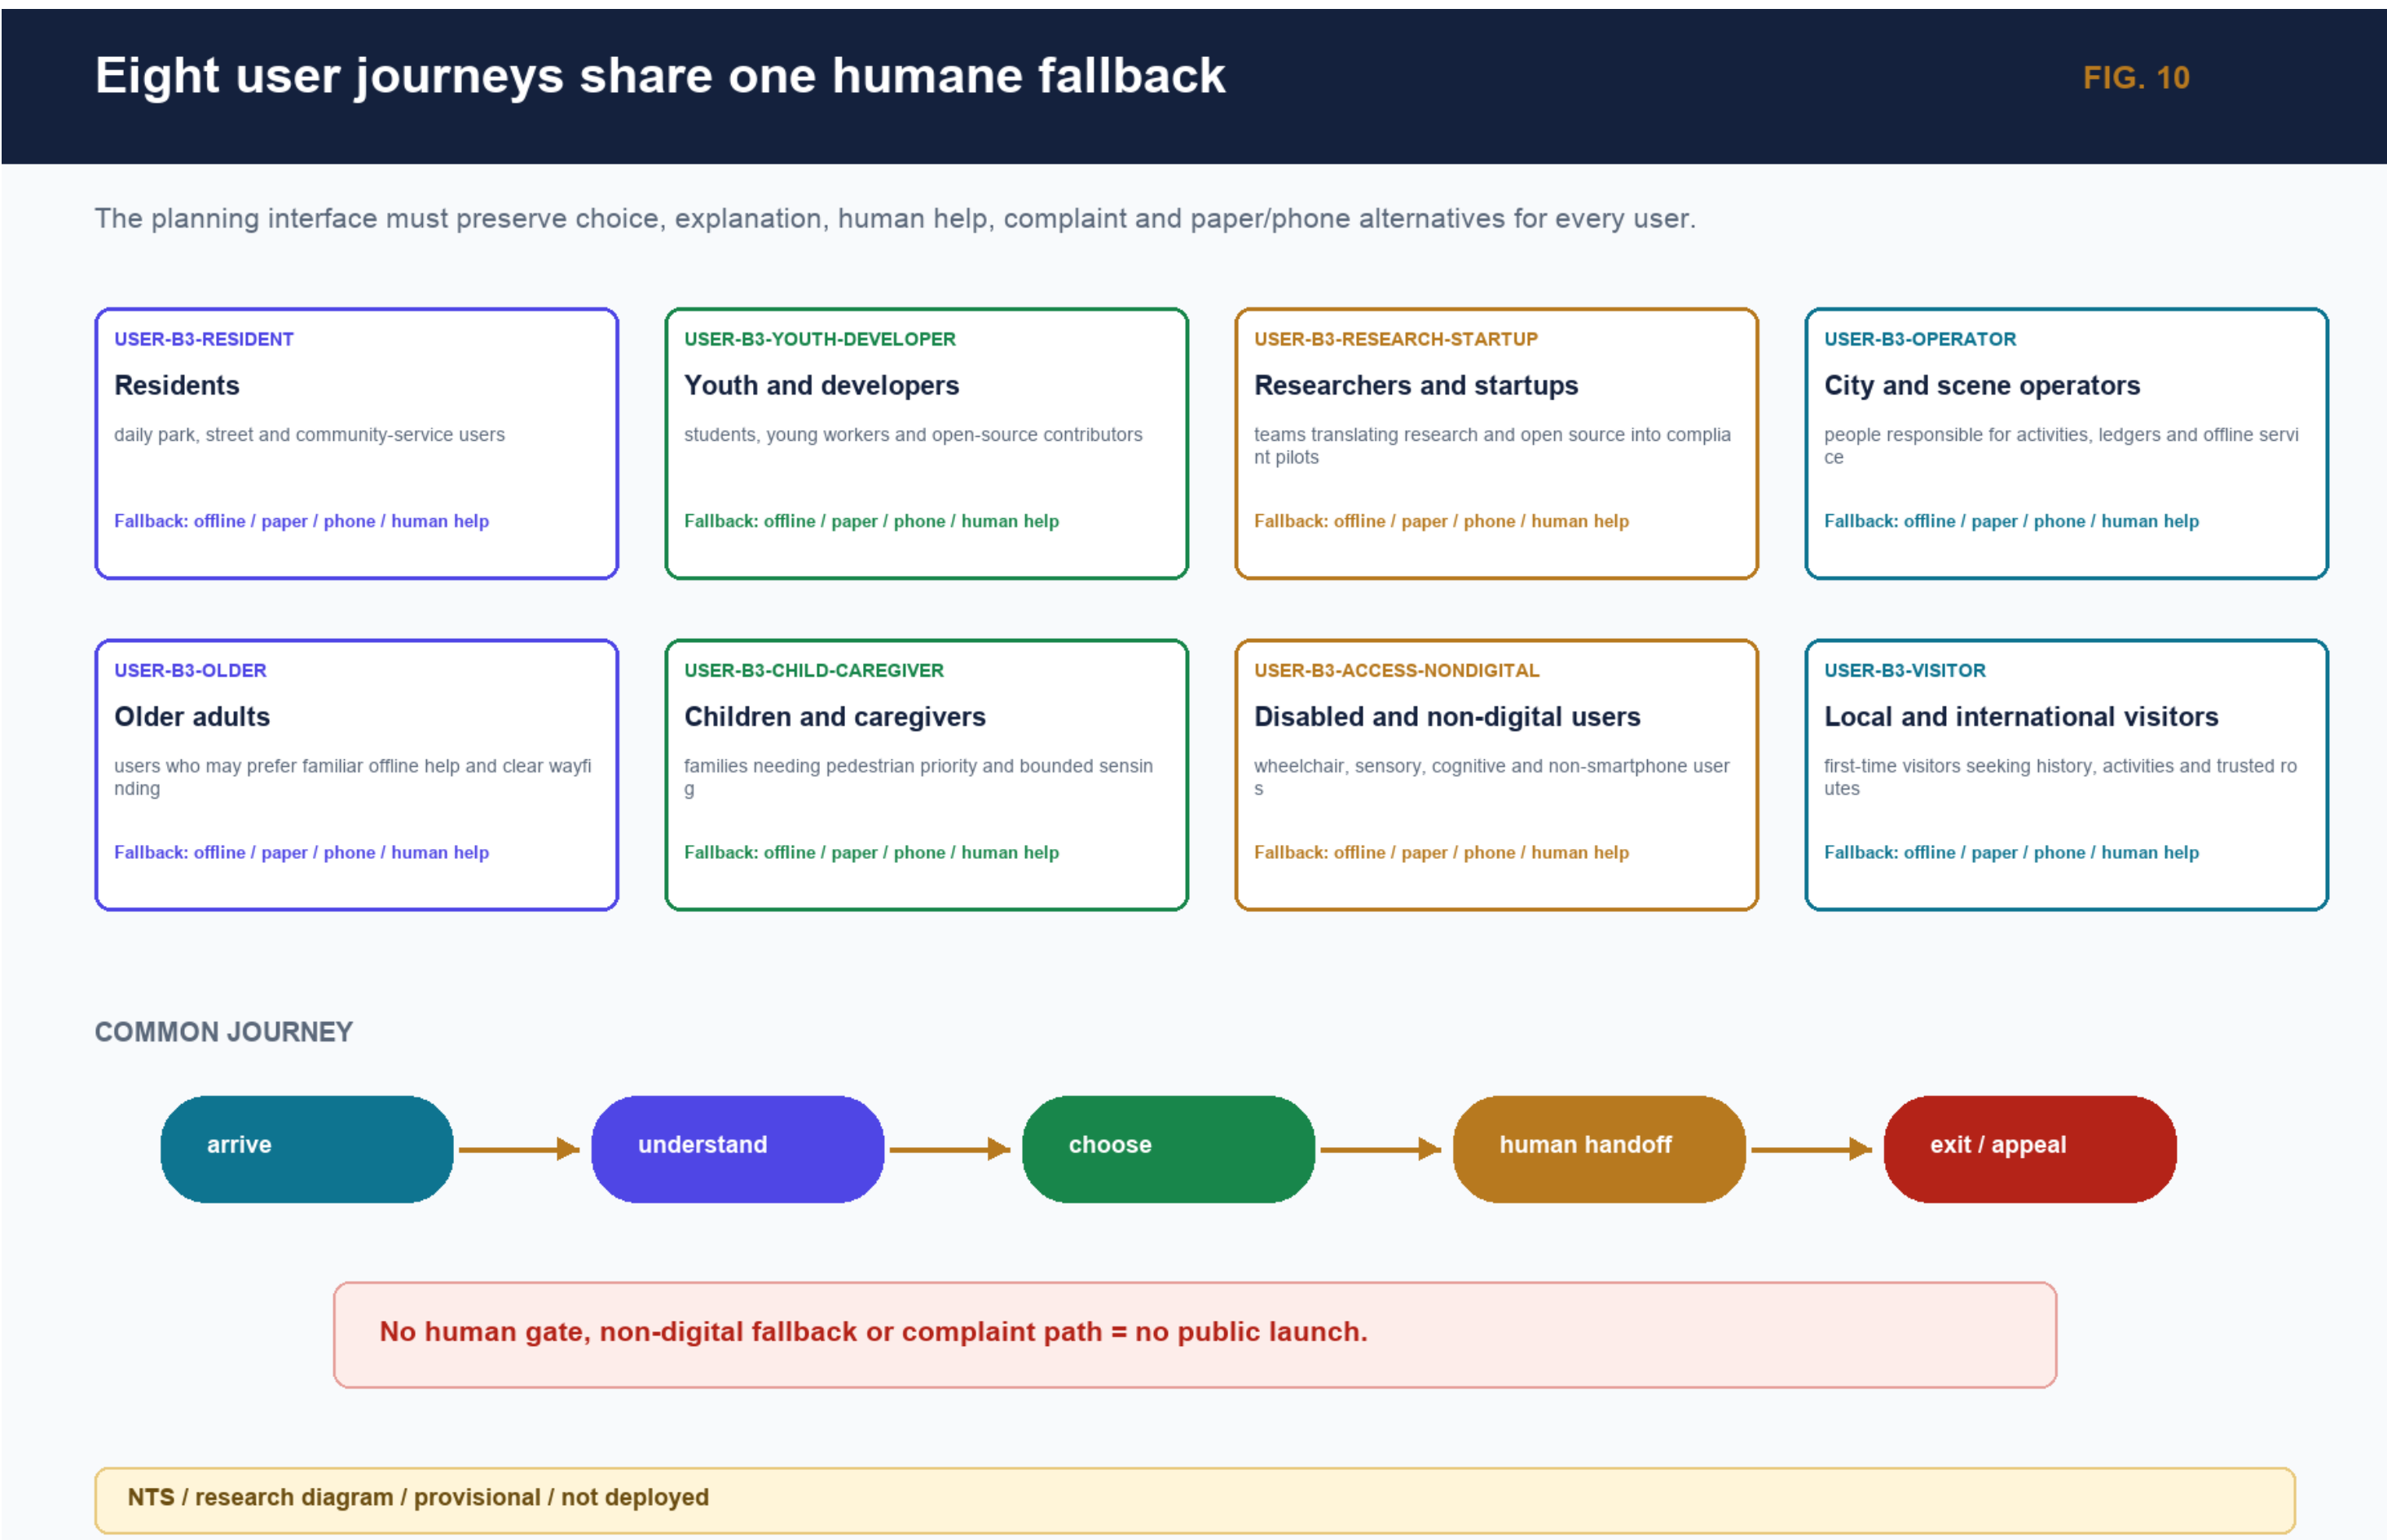

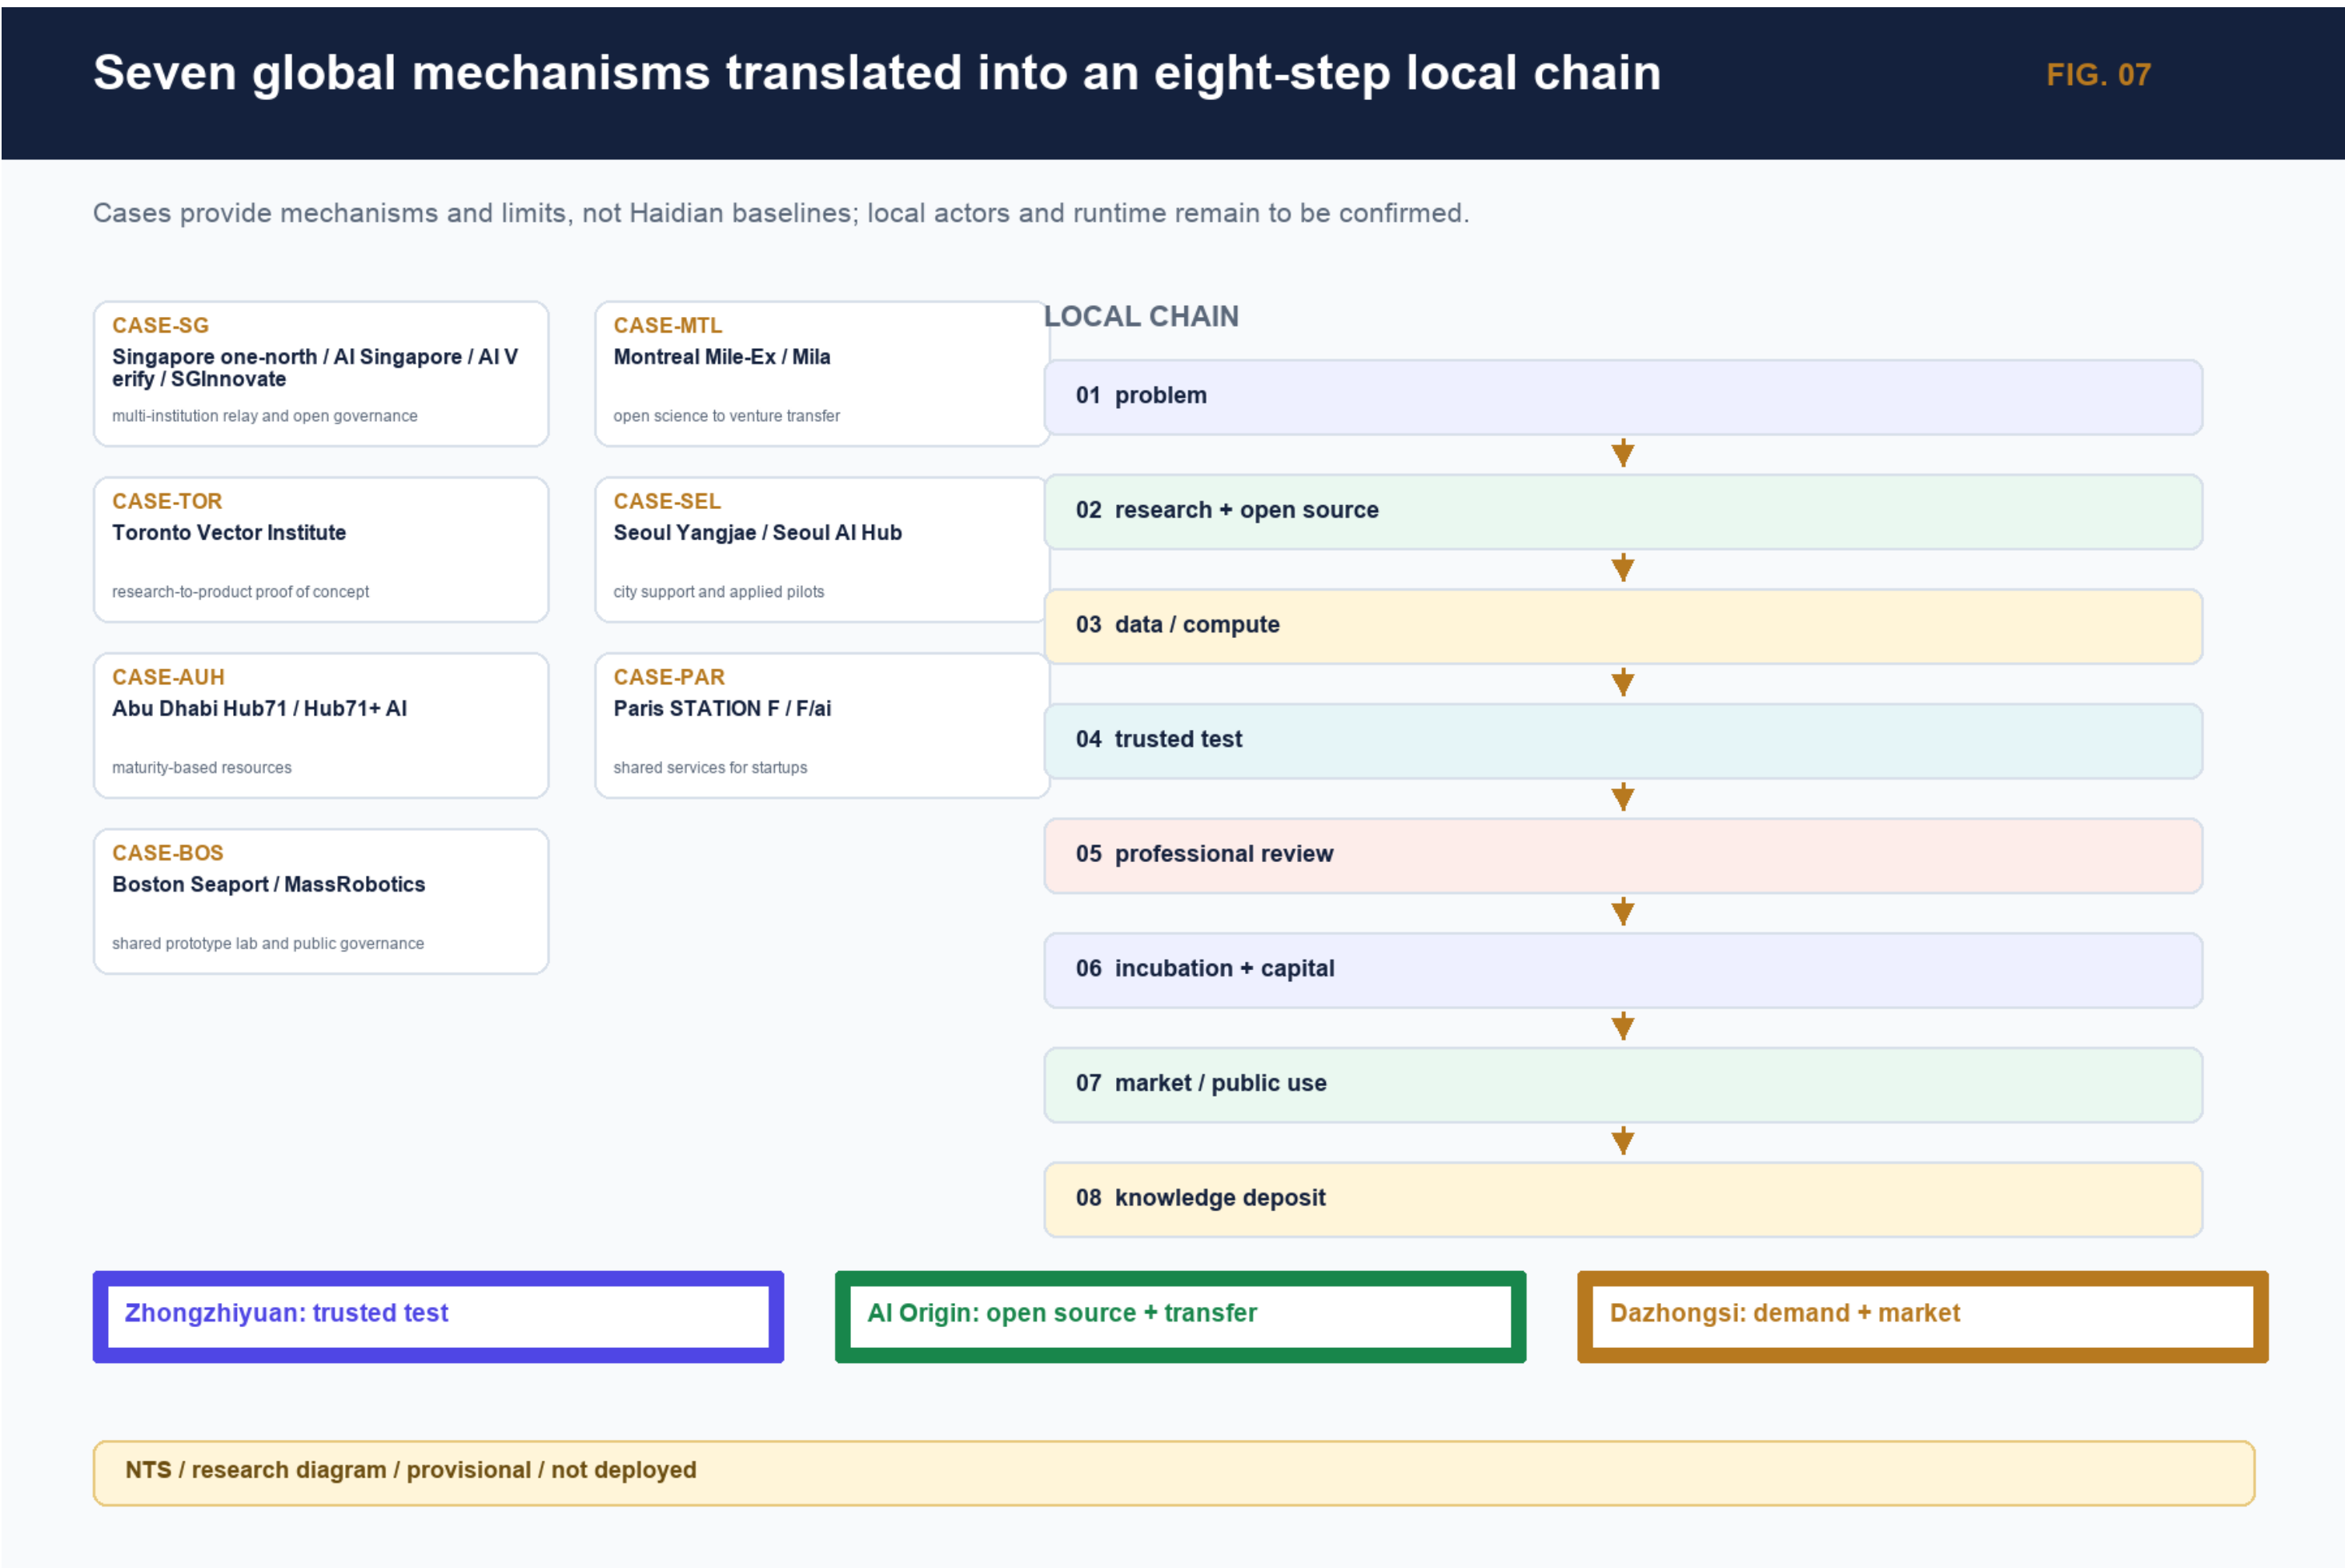

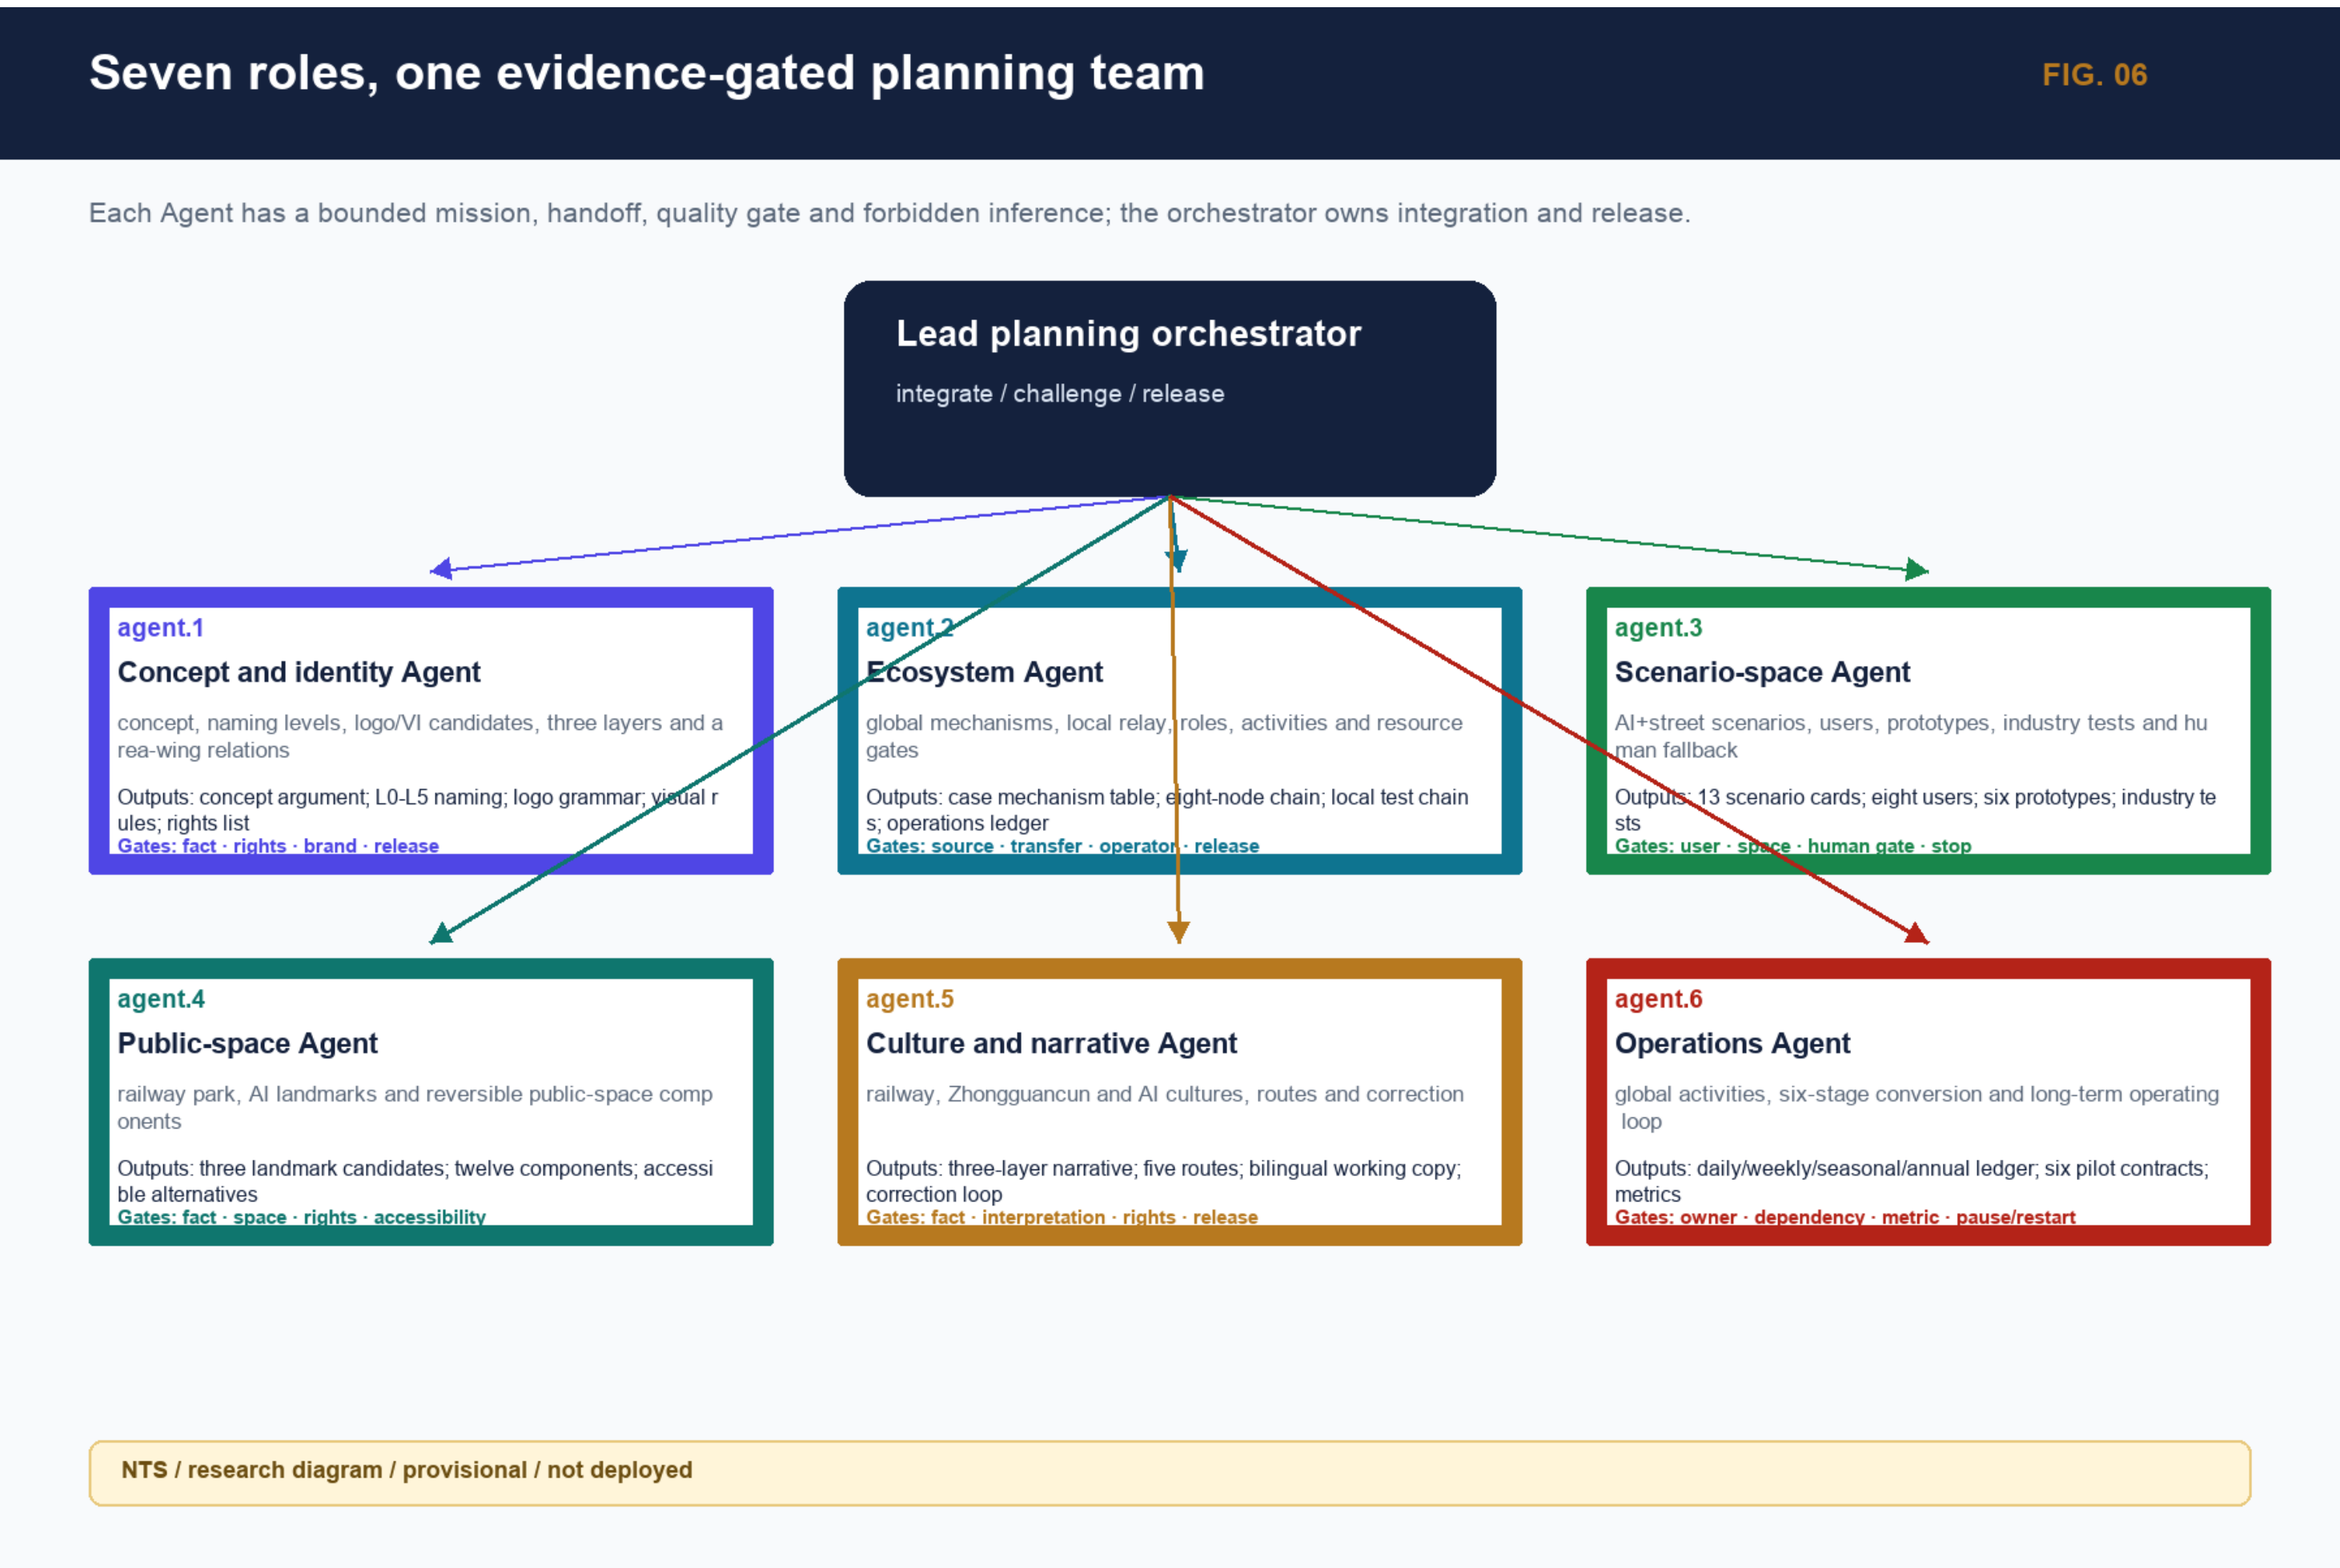

Metrics are a feedback loop, not a dashboard ornament

FIG. 05

Unknown baselines stay unknown; every candidate metric has an owner, trigger and stop/restart action.

NTS / conceptual proposal / provisional geometry / not deployed

One identity, six levels, three reversible logo directions

FIG. 12

Naming separates project title, spatial strategy, public narrative, areas, scenes and points; all identity directions remain candidates pending rights review.
