Mobility & Blue-Green Public Space

The Stitching System and the Blue-Green Frame

Two horizontals, one vertical; every stitch unit's two feet must land a function

- Heritage-line spine
- Blue-green space (green_space)
- Public space (public_space)
- Qing River · Xiaoyue River (schematic, unsurveyed)

Review rule: a connection whose two feet cannot each name an allocated function is not counted.

Stitch units are not plotted in this figure -- the two the text calls confirmed (N4.2, N3.6) have no coordinate geometry anywhere in the submission yet; they will be drawn once chainage-to-coordinate data exists, not invented.

The Qing River and Xiaoyue River are shown at schematic, unsurveyed positions.
The boundary is a provisional substitute; official coordinates are unpublished.

Legend

- Heritage-line spine
- Blue-green space (green_space)
- Public space (public_space)
- Qing River · Xiaoyue River (schematic, unsurveyed)

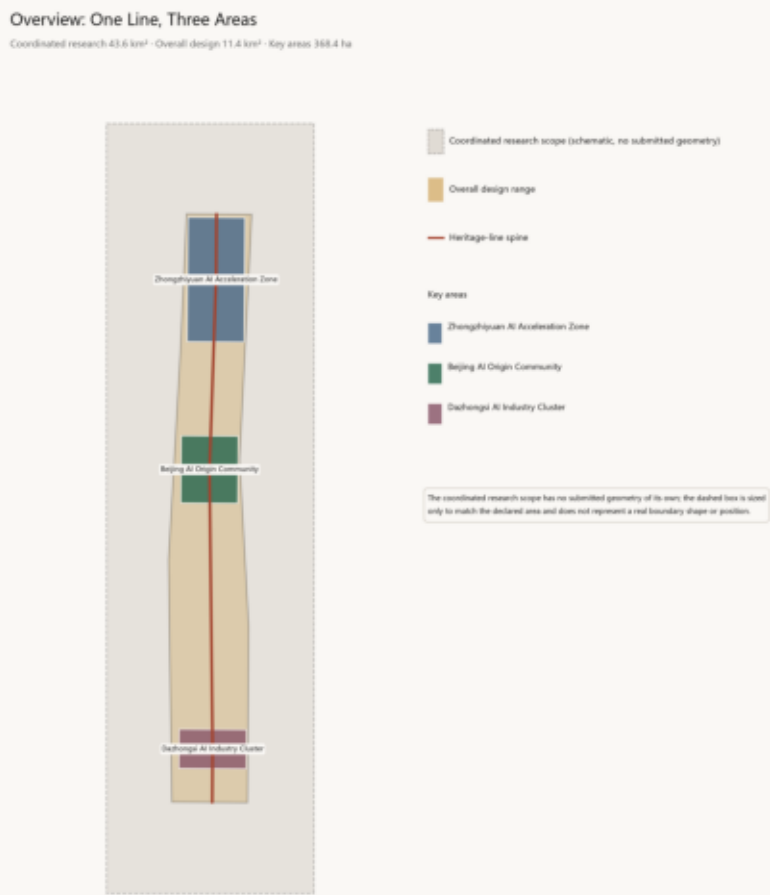

Legend for the hero figure (stitching + blue-green frame); the six supporting figures carry their own legends and captions.

Provisional Boundary Warning

Every geometry on this board is built on the provisional substitute boundary supplied in the site package, not an official redline -- for AI-agent generation, display, and intake self-check only, never an approval basis or precise area basis. Must be recomputed once official coordinates are published (assumptions.json:A-BOUNDARY-001).

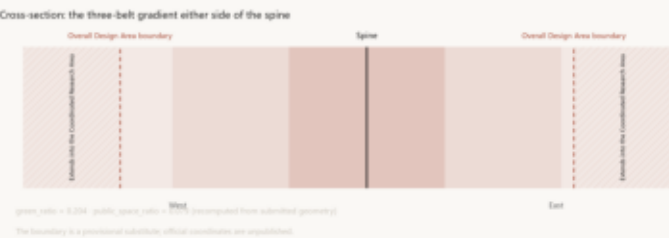

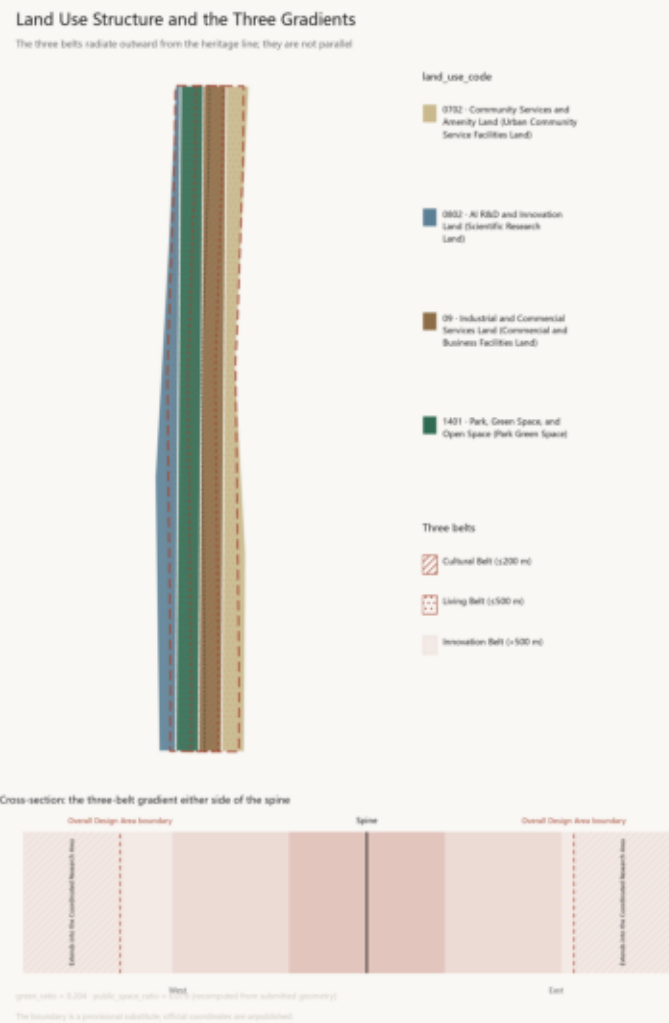

Zigzag stitch units' chainage numbering and functional binding are settled, but precise coordinates await chainage-to-coordinate reference data (assumptions.json:A-CHAINAGE-001; see "Zigzag Stitch Unit Typology").

Overview: One Line, Three Areas

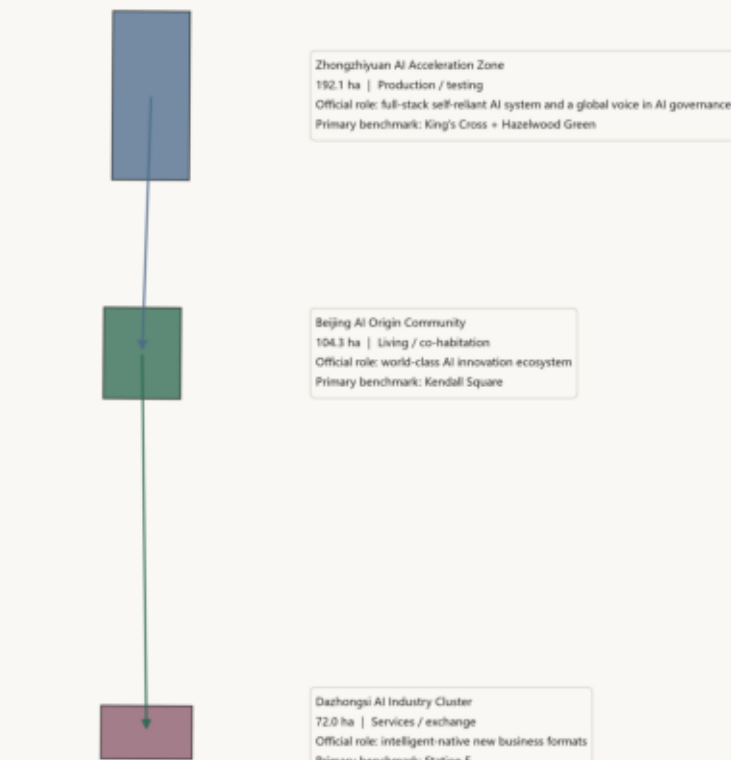

The coordinate research scope has no substituted geometry of its own; the redline has no real role to fulfil the historical area and does not represent a real boundary design or practice.

Land Use Structure and the Three Gradients

Three Key Areas: Three Modes of Contact Between AI and the City

Three key areas: three modes of contact between AI and the city

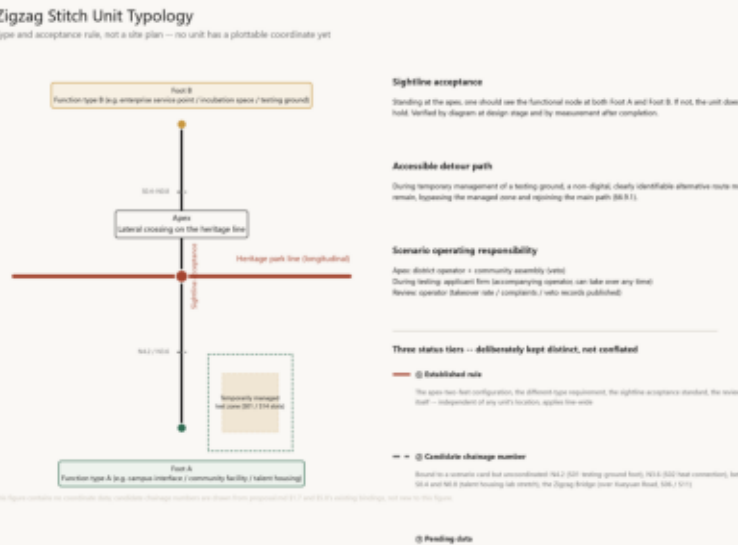

From bottom to official published figures: The regional boundary is a provisional substitute; no official data from the published figures.

Core Metric Recalculation & Evidence Chain

Metrics Evidence: What Is Computed and What Is Honestly Unknown				
ID	Source	Method	Current value	
site_area_sqm	assumptions.json:site_area_sqm	assumptions.json:site_area_sqm	11,412,825 m²	Site is a coordinated research scope (schematic, not substituted geometry)
building_footprint_area_sqm	assumptions.json:building_footprint_area_sqm	assumptions.json:building_footprint_area_sqm	310,807 m²	7-year observation of building footprint information
green_ratio	assumptions.json:green_ratio	assumptions.json:green_ratio	0.204	> 70%
public_space_ratio	assumptions.json:public_space_ratio	assumptions.json:public_space_ratio	0.079	Black and green ratio
floor_area_ratio	assumptions.json:floor_area_ratio	assumptions.json:floor_area_ratio	0.079	100%
key_area_count	assumptions.json:key_area_count	assumptions.json:key_area_count	3	Public (green space) contribution (public space) ratio

Site is a coordinated research scope (schematic, not substituted geometry)
