

# A City with Doors

One household: 15:30 handoff. 21:40 outage. A way home remains.

15:30

school—crossing—community

21:40

return-home chain

PHASE 1

P04 · P05 · P06 · P10

THREE EVIDENCE ROLES

Official material confirms an approved street-level plan for nine districts and approximately 16.7 km<sup>2</sup>; this project does not derive competition boundaries or parcel controls from it.

The government reprint supports directional Dazhongsi and public-service context, but not project sites, operators, budgets or service readiness.

Official records evidence the Phase II approval, tender procedure and reported progress of the described supporting works; they do not prove completion of all works or this competition proposal.

Evidence entry: three statutory roles / 28 measurement protocols / P01-P10 responsibility-trigger matrix / 12 scenes v0.2

Site Overview | Three-Level Scope and Five Urban Networks

Concept proposal / provisional geometry / not for navigation or construction

Dazhongsi

THREE SCALES

43.6 km<sup>2</sup> strategy → 11.4 km<sup>2</sup> system translation → 368.4 ha local proofs

FIVE URBAN NETWORKS

movement · blue-green/public realm · staffed service · maintenance/logistics · energy/offline recovery

THREE KEY AREAS

testing/repair · everyday continuity · public translation

ONE GOVERNANCE CONTRACT

permission resets by place/task; responsibility transfers after named human acceptance

11.4 km<sup>2</sup> is the sole metric denominator.

Replace official polygons, then recompute the full bundle.

PRIMARY / site-overview.en.png

Three Key Areas: Spatial Nodes and Continuous Human Paths

Concept nodes | no coordinate/private export | agent stop, no-AI path and named human receipt stay visible

SCN-ZZY-01 Machine-Weather Admission and Safe Return

Named-human admission

Bounded test ring

Ordinary public movement / observation edge

Independent hard stop and isolation

Safe harbour / mechanical tow

AGENT ACTION / STOP

One admission binds one actor; device/version, envelope and time window: weather, surface or control abnormality stops the run.

NO-AI / HUMAN PATH

The public need not yield and is not a test sensor; no powered return follows a hard stop.

IMPLEMENTATION + EVIDENCE

Implementation: Enter a bounded test only when a named human, ordinary public movement, independent hard stop, maintenance and physical recovery are all available; stop if any gate fails.

Evidence: field\_survey\_required — field survey required

SCN-AIO-03 Pre-authorization, Human Takeover and Closure in Older-Adult Care

Nonspatial household privacy gate

Community human help / takeover

Minimum task-information handoff

Qualified medical / care receiver

Completion receipt and permission closure

AGENT ACTION / STOP

Individual authorization comes first; household, older adult or private agent is not an always-on sensor: Open, online or business hours do not equal professional receipt.

NO-AI / HUMAN PATH

No-AI path: phone, voluntary neighbour, community and emergency human chain; no real-hospital claim.

IMPLEMENTATION + EVIDENCE

Implementation: Pre-authorization covers minimum task data only; a community human takes over first; transfer occurs only after an eligible medical or care receiver explicitly accepts, and the permission then closes.

Evidence: field\_survey\_required — field survey required

SCN-DZS-01 Multilingual Urban Foyer for Arriving Visitors

Arrival entrance / human overview

Ordinary credential-free route

Optional, revocable digital help

Staffed / quiet route

Help and complete exit

Explicitly accepting receiving institution

AGENT ACTION / STOP

Public access, wayfinding, accessibility and exit are not conditioned on Visitor Pass; translation confidence creates no identity, authority or responsibility.

NO-AI / HUMAN PATH

Station, road, property, staffed desk and receiver hold segmented duties; digital refusal or failure preserves the ordinary line.

IMPLEMENTATION + EVIDENCE

Implementation: An ordinary credential free route always stands; digital help is optional and revocable, with staffed, quiet and help exits retained; institutional responsibility begins only after explicit acceptance.

Evidence: field\_survey\_required — field survey required

SCN-AIO-01 / 15:30 Human Handoff through Slow Gates

Named school-side human

Three slow gates confirmed by segment

Ordinary visible crossing

Explicit community-side human acceptance

No tracking / stop if responsibility is not accepted

SCN-AIO-02 / Closable Homebound Chain after a 21:40 Outage

21:40 power loss

Nonessential screens withdraw

Physical signs / lighting / fixed help

Park—property—community segmented human relay

Household and visitor privacy stop line

P1 / SOURCE CONTRACT

The 15:30/21:40 probes follow one household: named school staff hold responsibility until physical handoff; the non-AI baseline keeps the outage route open. The named kindergarten's timetable, staggered release, extended care, pickup duties and real gates remain unverified. Phase 1 only builds evidence; the wider system follows after closure.

PHASE 1 / CLOSE EVIDENCE FIRST

P04 · P05 · P06 · P10 | named humans · mechanical bypass · recovery · exit
