

METRIC • JZ: Indicator Implementation & Supervision

A0 board set • 3 formal core metrics • 10 AI scenario cards • 3 industry tests • 5 profiles • 4 annual programs

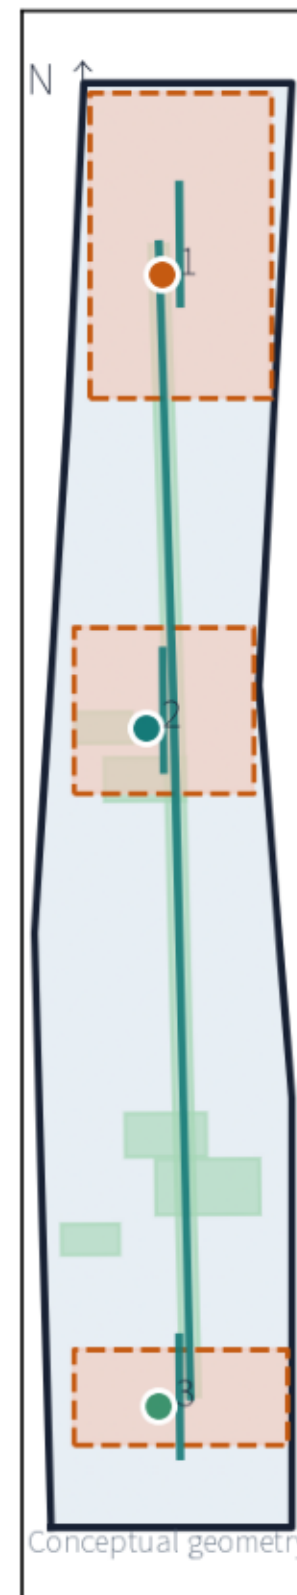

Hub → Post → Pavilion → public disclosure

PROVISIONAL • not official redline • recalculate after official data

Overall design scope: Three nodes + taskbook Three Areas & Two Wings

11.4 km² concept subset • internal taskbook structure is separate from the out-of-belt network

Conceptual geometry • source: package GeoJSON

PROVISIONAL • not official redline • recalculate after official data

Taskbook-listed coordination structure

- Three Areas: Zhongzhiyuan • Beijing AI Origin Community • Dazhongsi Cluster
- Two Wings: Zhongguancun Technology-Service • Xiaoyuehe Scenario-Empowerment
- Text structure only; not statutory planning, redlines or approved controls

Out-of-belt: Five-Region Coordination Network

- Beiwai Community • Future Science City • Huairou Science City
- Economic-Technological Development Area • Jing-Jin-Ji
- Package concept name; relational suggestion only

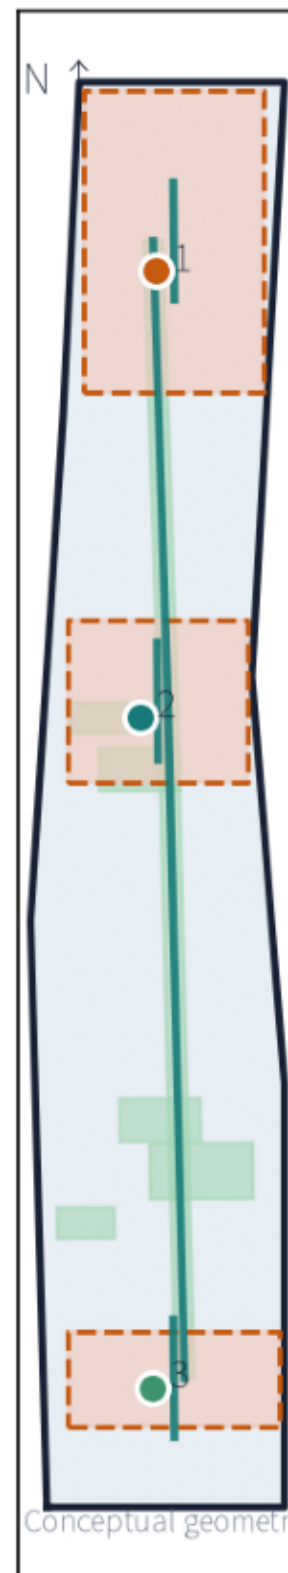

Three nodes / implementation loop

- Indicator Hub → Monitoring Post → Disclosure Pavilion
- Slow-traffic spine and blue-green interface link the nodes

Key Areas: Three Node Briefs

Concept locations tied to geometry/key_areas.geojson • final siting requires official boundary and field review

PROVISIONAL • not official redline • recalculate after official data

Conceptual geometry • source: package GeoJSON

1 • Indicator Hub

- Caliber master control, deliverable ledger, anonymized aggregation

2 • Monitoring Post

- Implementation status, sample checks, deviation alerts

3 • Disclosure Pavilion

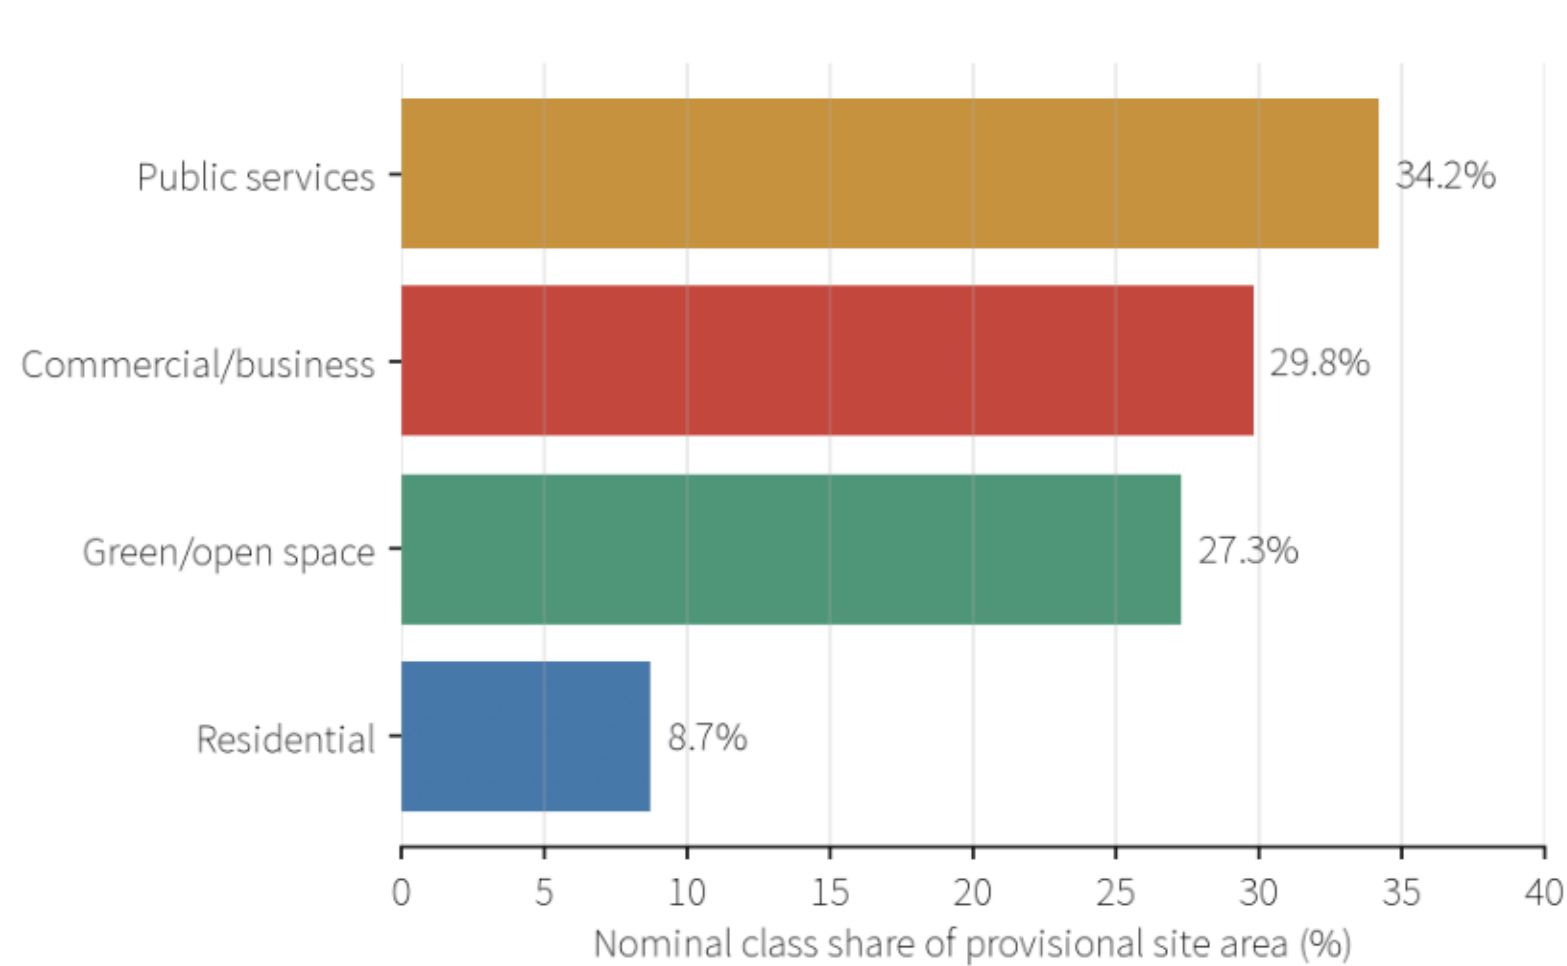

- Bilingual disclosure, public feedback, human review

Links: node briefs → 10 scenario cards → 3 industry tests → phase gates

Concept output • reduced precision in human-readable surfaces • machine values remain in metrics.json

Land-use structure + three-caliber cross-table

Single land-classification denominator; core ratios are narrower geometries and are not interchangeable

Same denominator, different numerators

- Land-class aggregate ~27.3%: 1401 zones incl. hard surfaces
- green_ratio ~11.0%: green-polygon union, overlaps merged
- public_space_ratio ~0.3%: node micro-parcels only

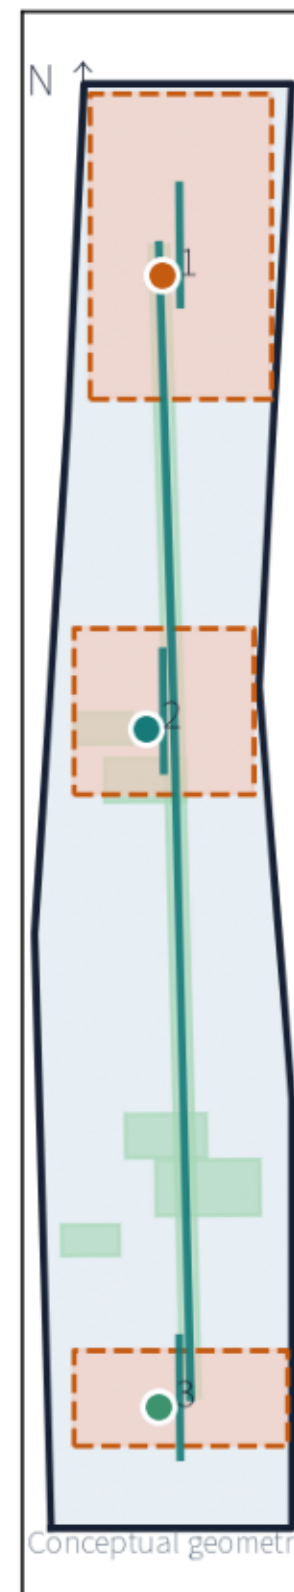

Do not add or substitute

- All three use provisional site_area_sqm denominator
- Official geometry release triggers a full synchronized recalculation

Machine values: metrics.json only • confidence low for geometry-derived ratios

Slow-traffic-first and blue-green interface

A continuous, low-intervention spine links the three nodes; no engineering values are asserted

Conceptual geometry • source: package GeoJSON

PROVISIONAL • not official redline • recalculate after official data

Mobility interface

- Walking/cycling priority • time-shared street states
- Rail-station access reviewed after field survey
- Slow spine connects Hub, Post, Pavilion

Blue-green interface

- Green belt as axis, node parks as pearls
- Reversible, light and transparent components
- Protect heritage views and sightlines

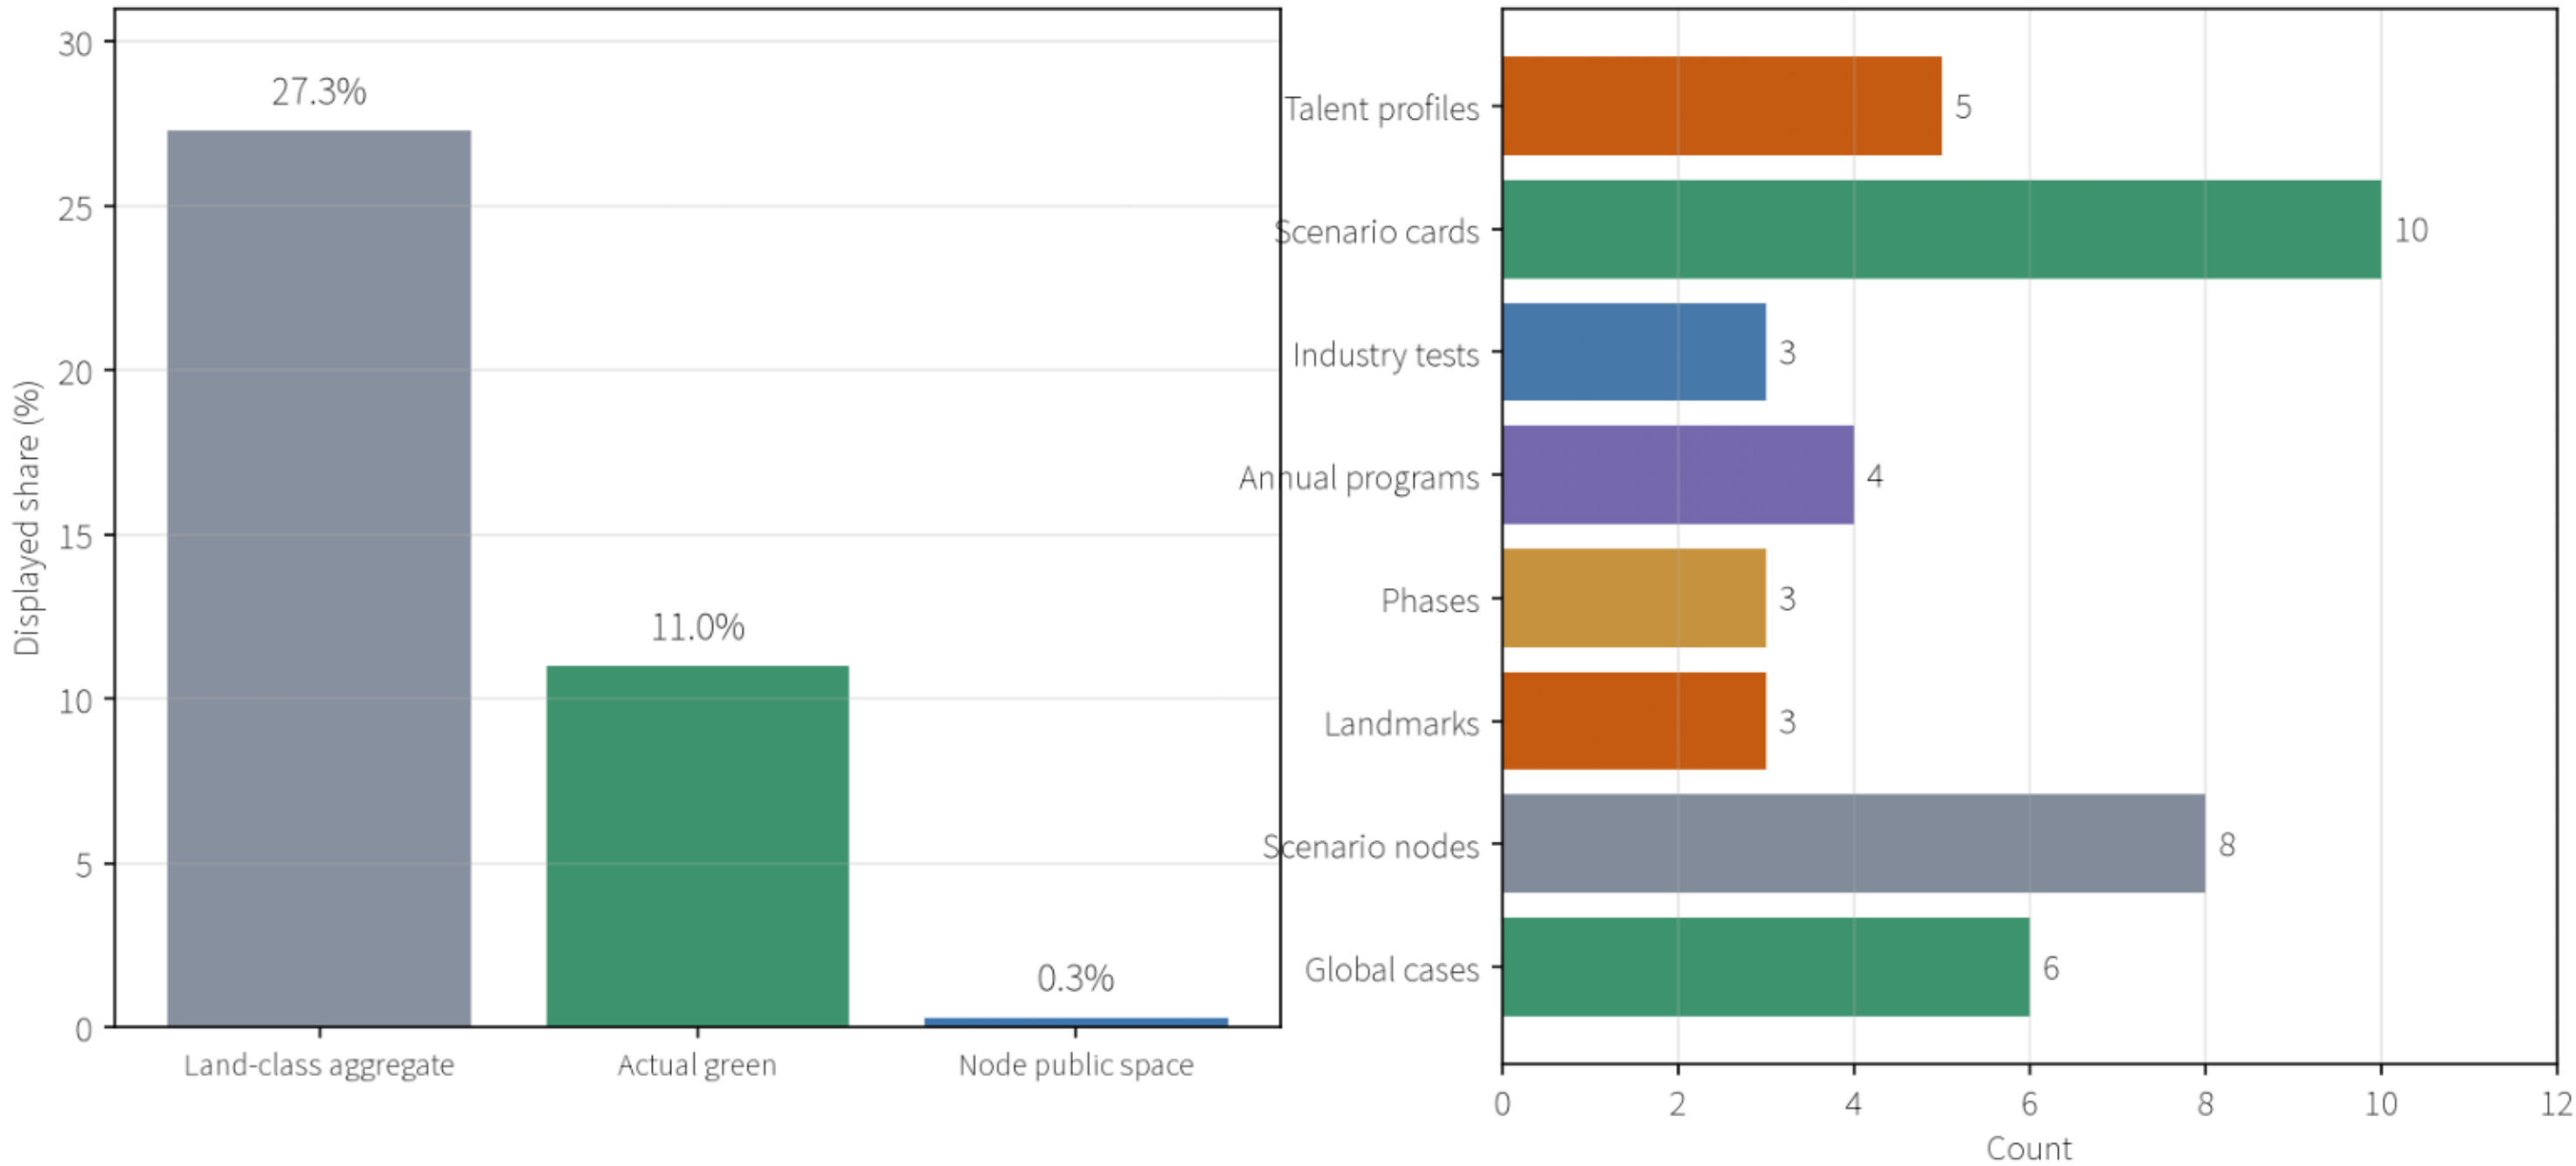

Safety / stop

- Human fallback for guidance and alerts
- Pause, retrieve and recompute if gate fails

Core metrics and delivery counts

Human-readable labels use reduced precision; full values remain in metrics.json

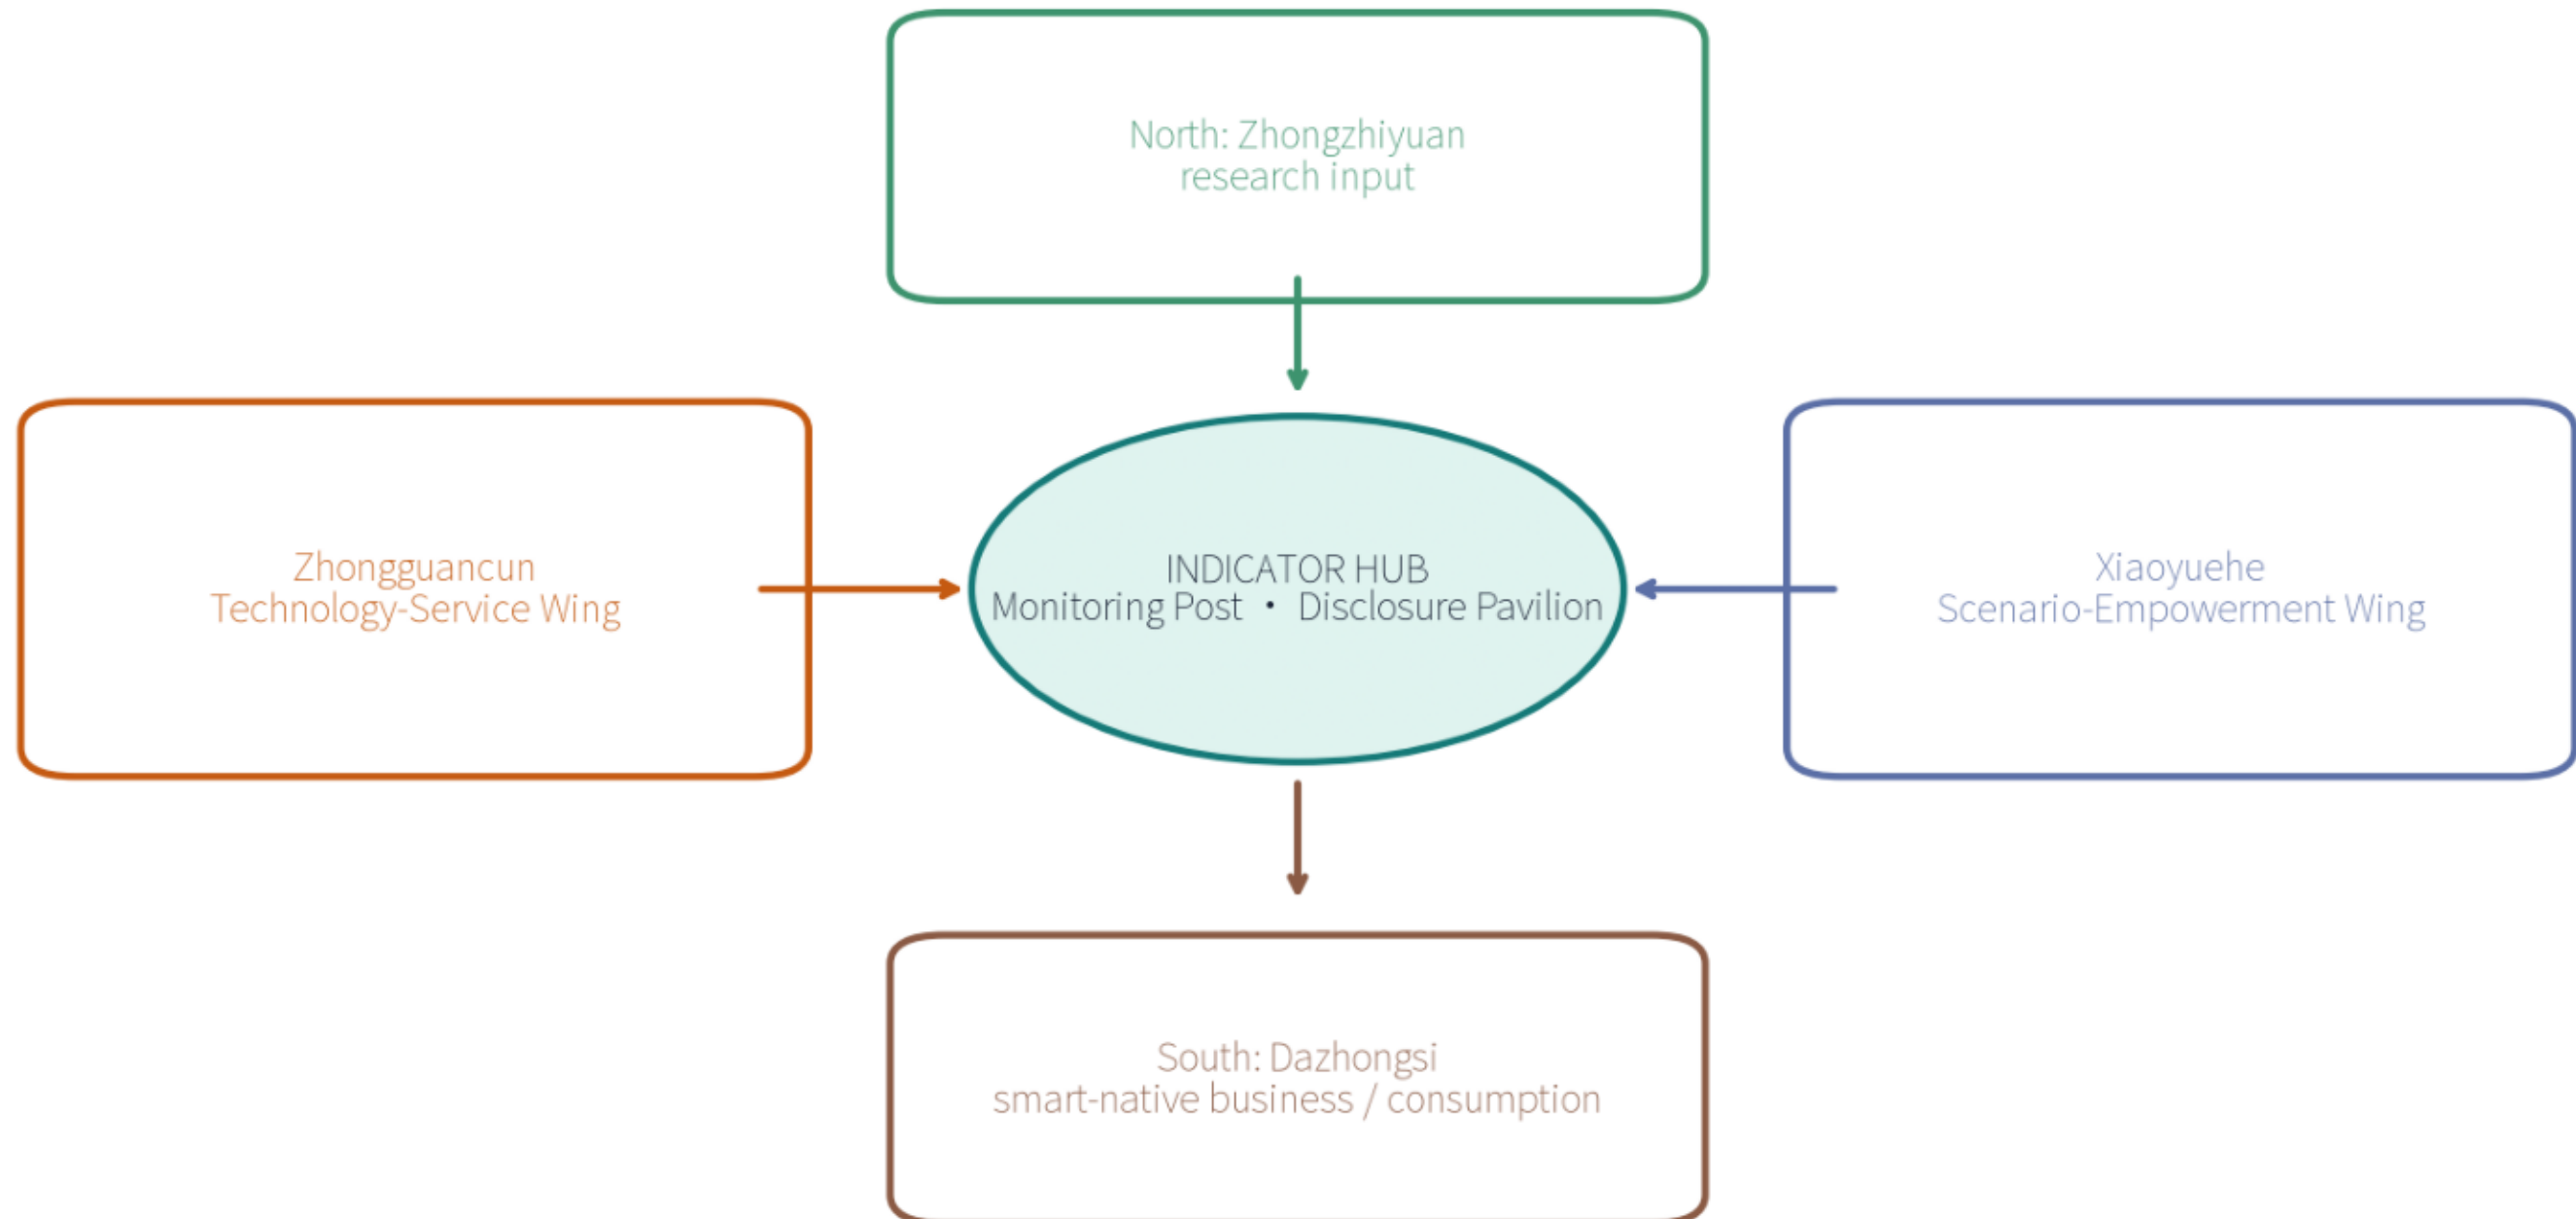

PROVISIONAL • not official redline • recalculate after official data

East-West Stitching — North-South Continuity

Concept relation map; suggested flows are not official axes, redlines or approved controls

PROVISIONAL • not official redline • recalculate after official data

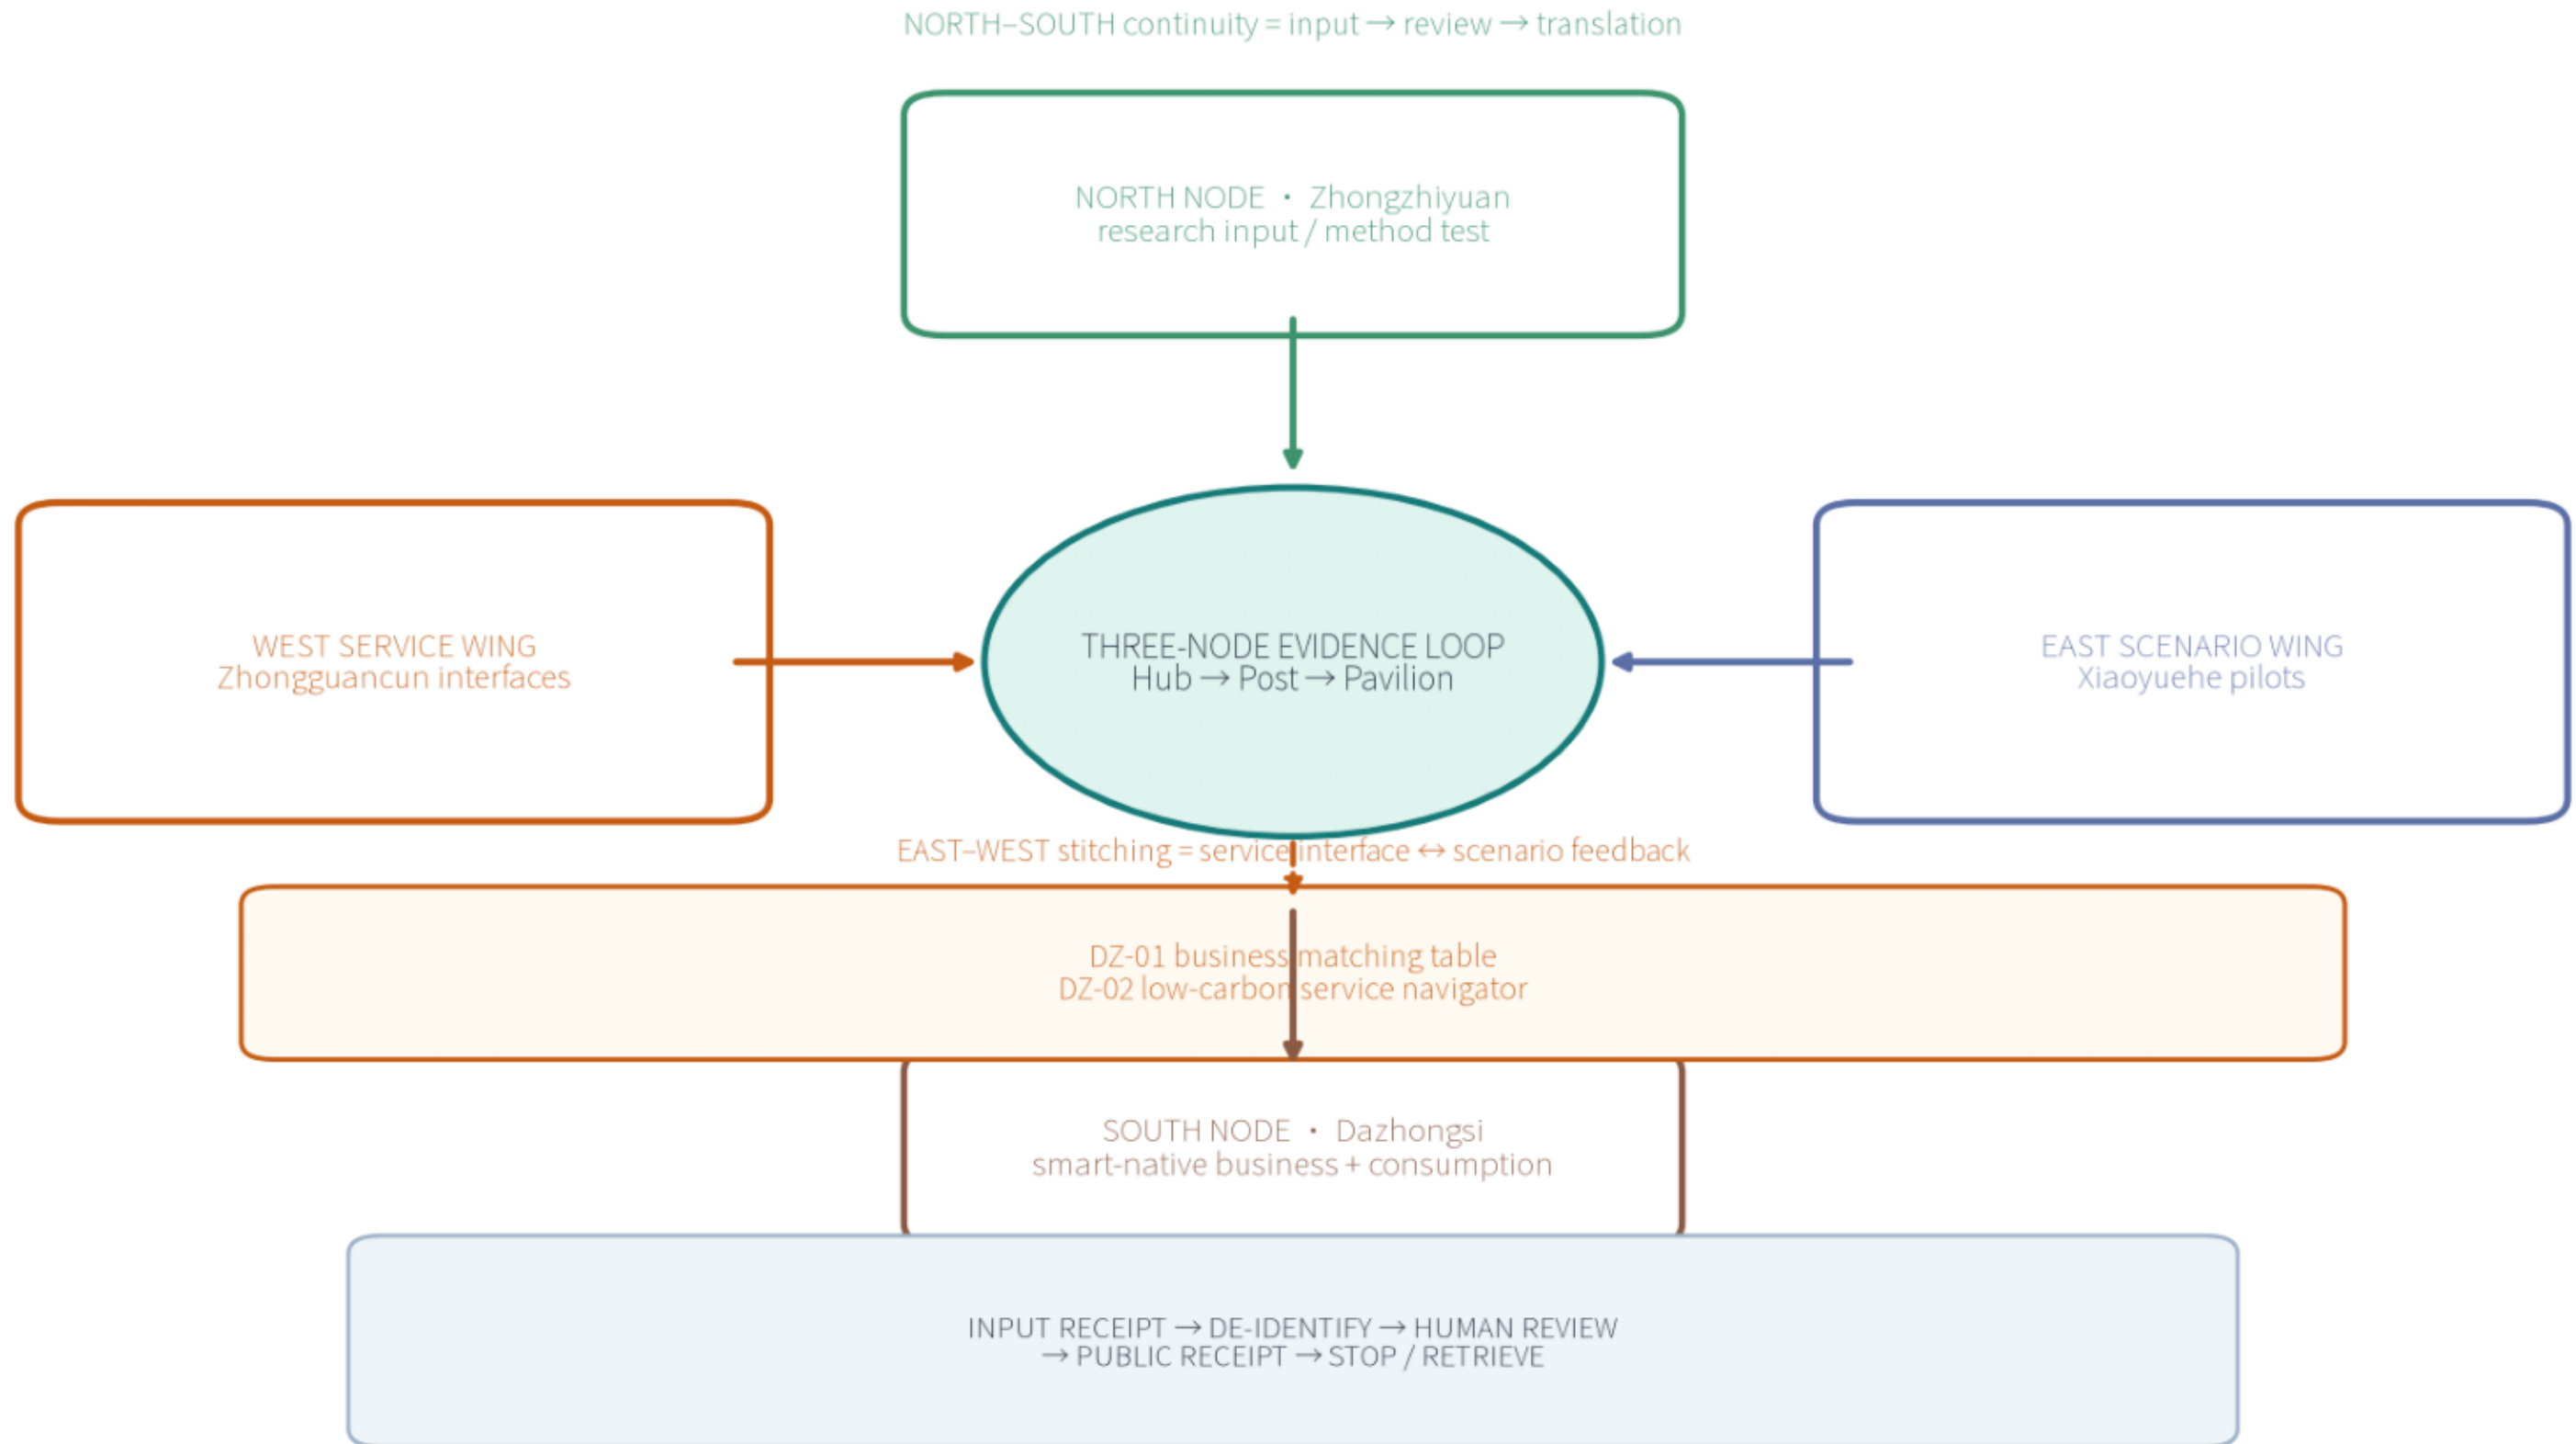

Concept spatial relation only • no official axis/redline • DZ-01/DZ-02 are concept cards

East-West Stitching / North-South Continuity: evidence relation map

Concept flow and evidence gates; no official axis, redline, site boundary or approved operation

PROVISIONAL • not official redline • recalculate after official data

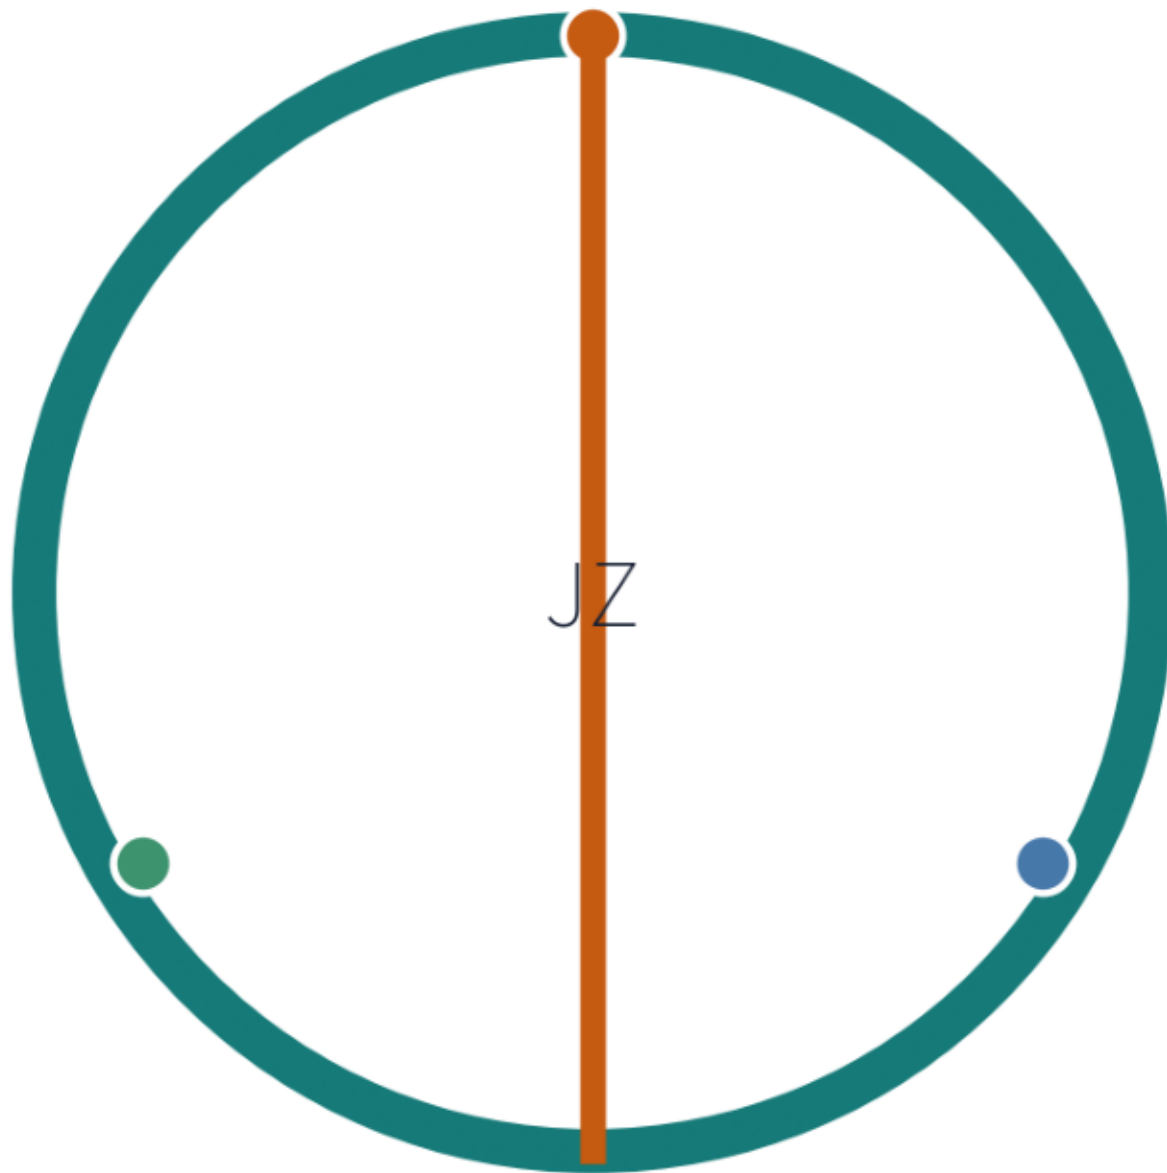

Concept output • reduced precision in human-readable surfaces • machine values remain in metrics.json

METRIC • JZ visual concept

Internal working codename; prior-rights search and legibility review remain to_verify

PROVISIONAL • not official redline • recalculate after official data

Usage boundary

- Dot + folded line + open frame are concept directions
- 24 px grid • 2 px base stroke • rounded terminals
- Apply only after rights, accessibility and contrast tests
- Repository/PR display only; no external reuse cleared
