

## Overview: One Line, Three Areas

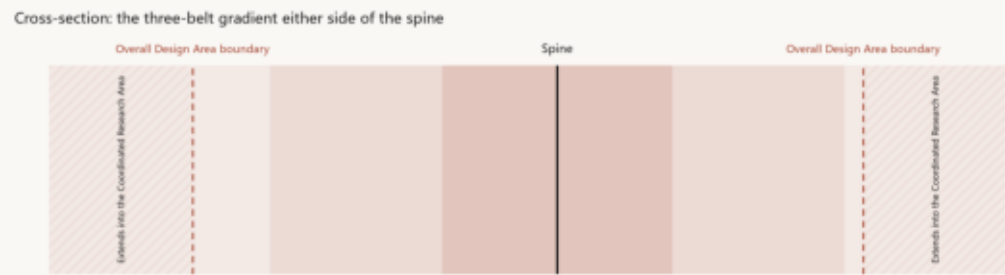

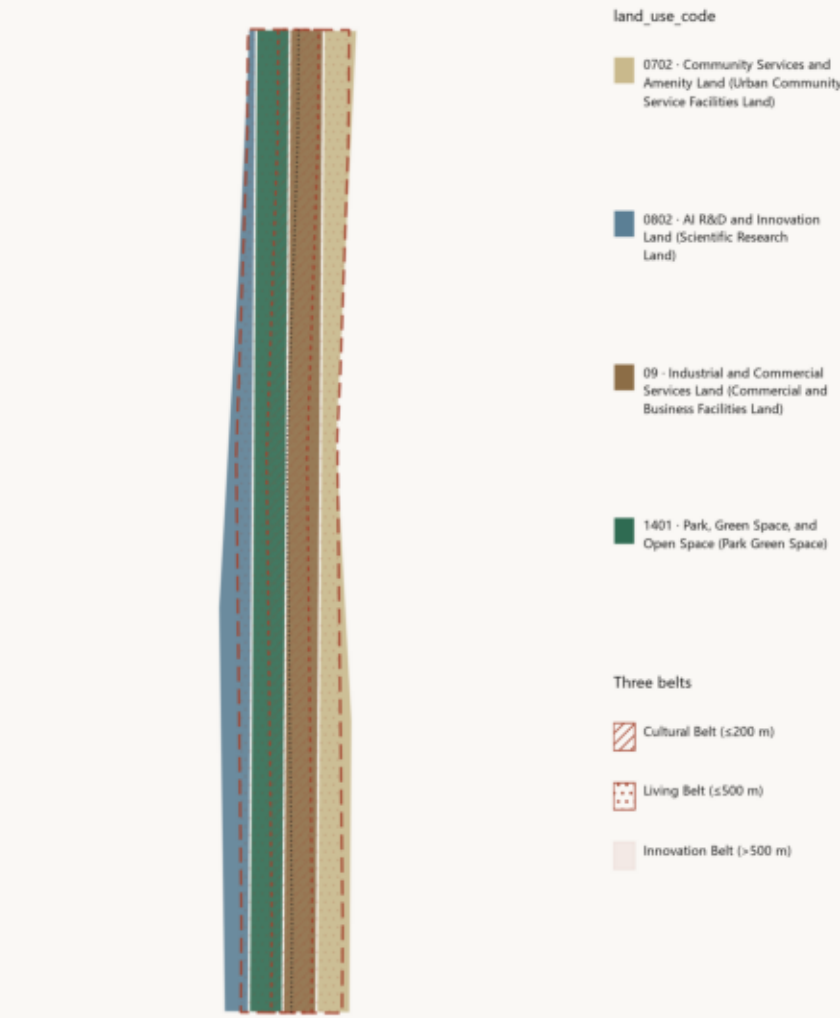

Overview: One Line, Three Areas  
Coordinated research 43.6 km<sup>2</sup> · Overall design 11.4 km<sup>2</sup> · Key areas 368.4 ha

The boundary is a provisional substitute; official coordinates are unpublished. Areas are recomputed from submitted geometry, except the coordinated research scope (see above).

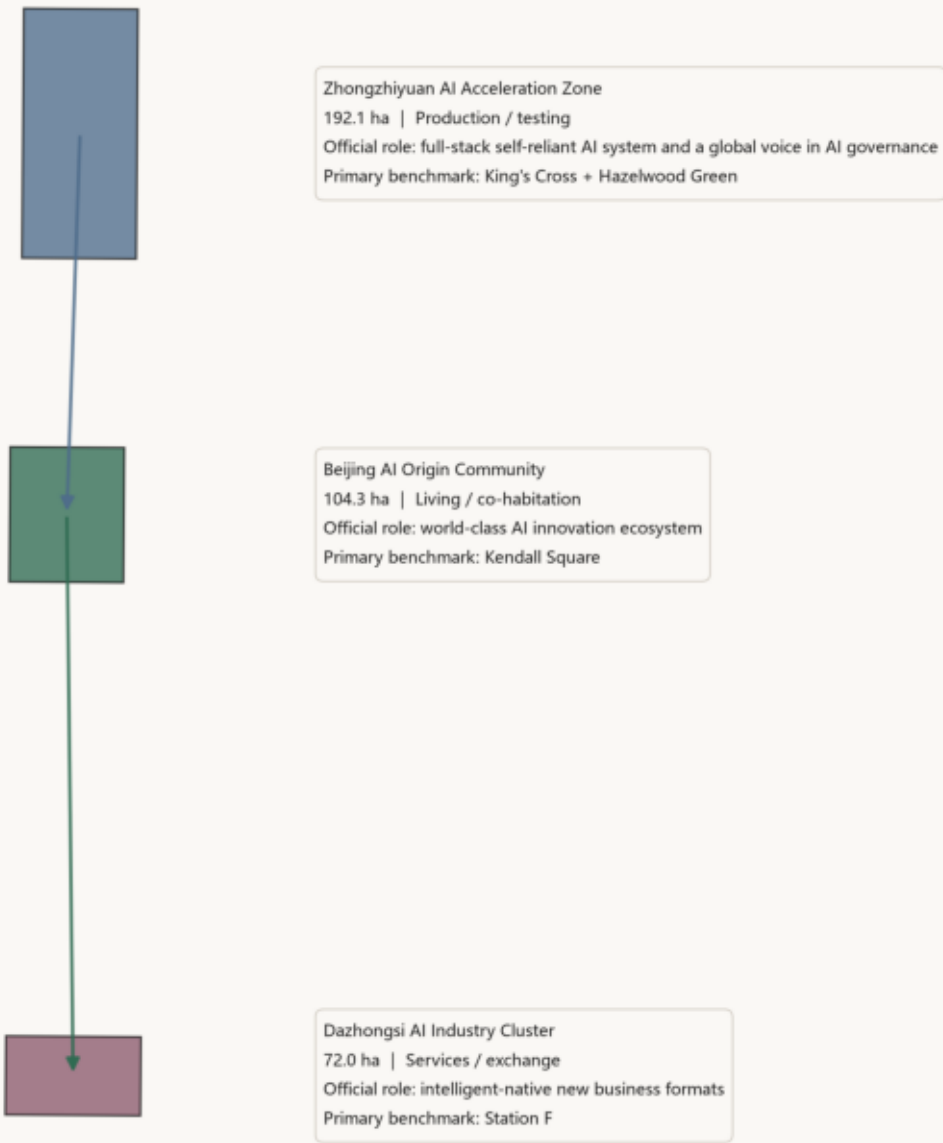

## Land Use Structure and the Three Gradients

Land Use Structure and the Three Gradients  
The three belts radiate outward from the heritage line; they are not parallel

## Three Key Areas: Three Modes of Contact Between AI and the City

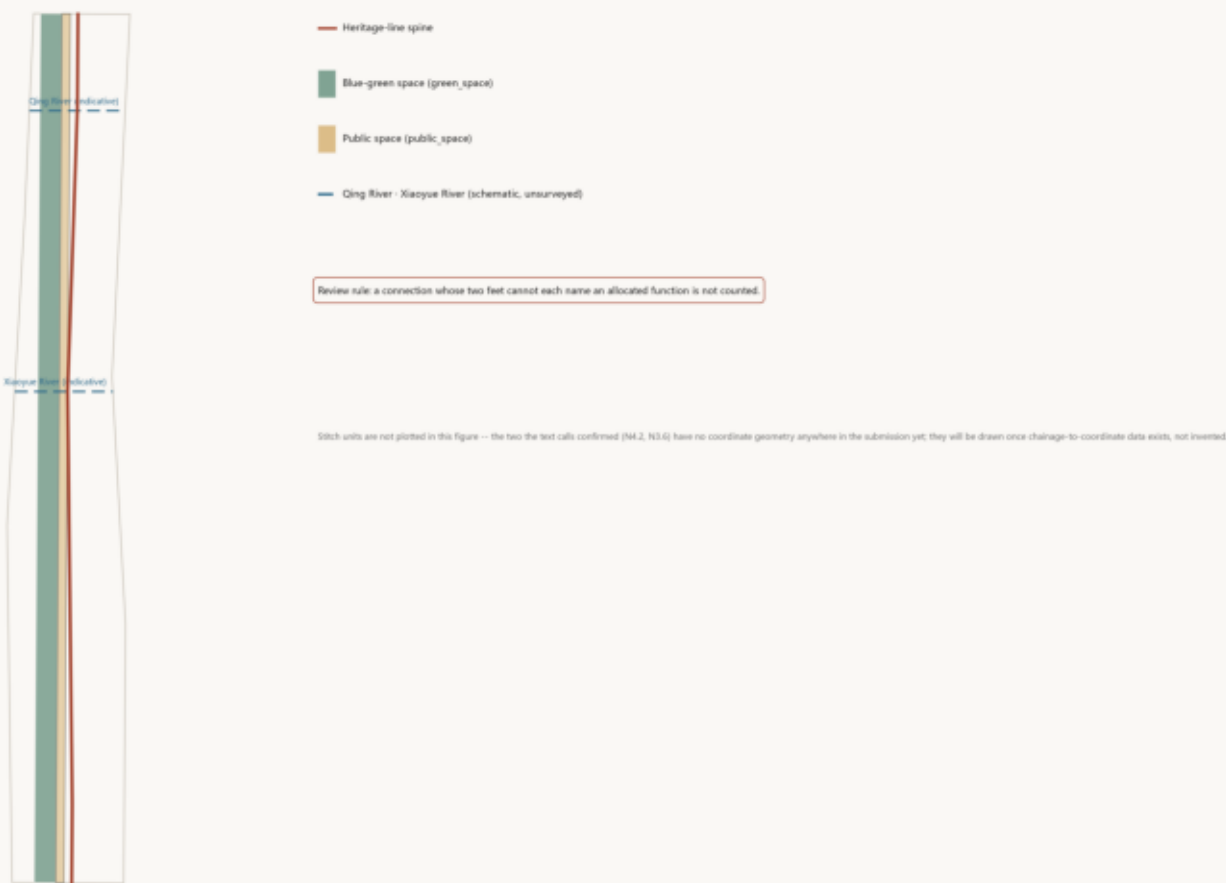

Three Key Areas: Three Modes of Contact Between AI and the City

Areas shown are official published figures. The mapped boundary is a provisional substitute; recomputed areas differ from the published values.

## Mobility & Blue-Green Public Space

The Stitching System and the Blue-Green Frame  
Two horizontal, one vertical, every stitch with two feet must send a function

The Qing River and Xiangpu River are shown at schematic, unsurveyed positions.  
The boundary is a provisional substitute; official coordinates are unpublished.

## Core Metric Recalculation & Evidence Chain

Metrics Evidence: What Is Computed and What Is Honestly Unknown

Class A is recomputed from geometry; Class B is a proposal commitment

| Field                       | Source                                                    | Method                                        | Current value             |
|-----------------------------|-----------------------------------------------------------|-----------------------------------------------|---------------------------|
| site_area_sqm               | geometry/site_boundary.gpkg                               | polygons_area(identified_site_boundary)       | 11,412,825 m <sup>2</sup> |
| building_footprint_area_sqm | geometry/buildings.gpkg                                   | sum(polygons_area(building_footprints))       | 310,807 m <sup>2</sup>    |
| green_ratio                 | geometry/green_space.gpkg<br>geometry/site_boundary.gpkg  | green_space_area_sqm / site_area_sqm          | 0.204                     |
| public_space_ratio          | geometry/public_space.gpkg<br>geometry/site_boundary.gpkg | public_space_area_sqm / site_area_sqm         | 0.079                     |
| floor_area_ratio            | building_packages/changes/<br>planning_building.gpkg      | total_floor_area_sqm / official_site_area_sqm | unknown                   |
| key_area_count              | geometry/key_areas.gpkg                                   | count(key_detailed_design_areas)              | 3                         |

Review: Official floor area ratio, height limit, and building density controls are not published for this site. Relying on a number would be fabrication. See assumptions/purpose/CONTROLS-001.

Every Class A value is computed once by the geometry generation script and written to both metrics.gpkg and VisualIndex.html's data value; none is hand-typed.
