

Xiaoyue River AI Scenario Wing: AI Roadshow Corridor & Public Experience Trail

■ Three-level scope: coordination study – overall design – key areas (provisional boundary)

■ Spatial structure: one belt, three sections, multiple points; main slow-traffic route ~3 km (concept)

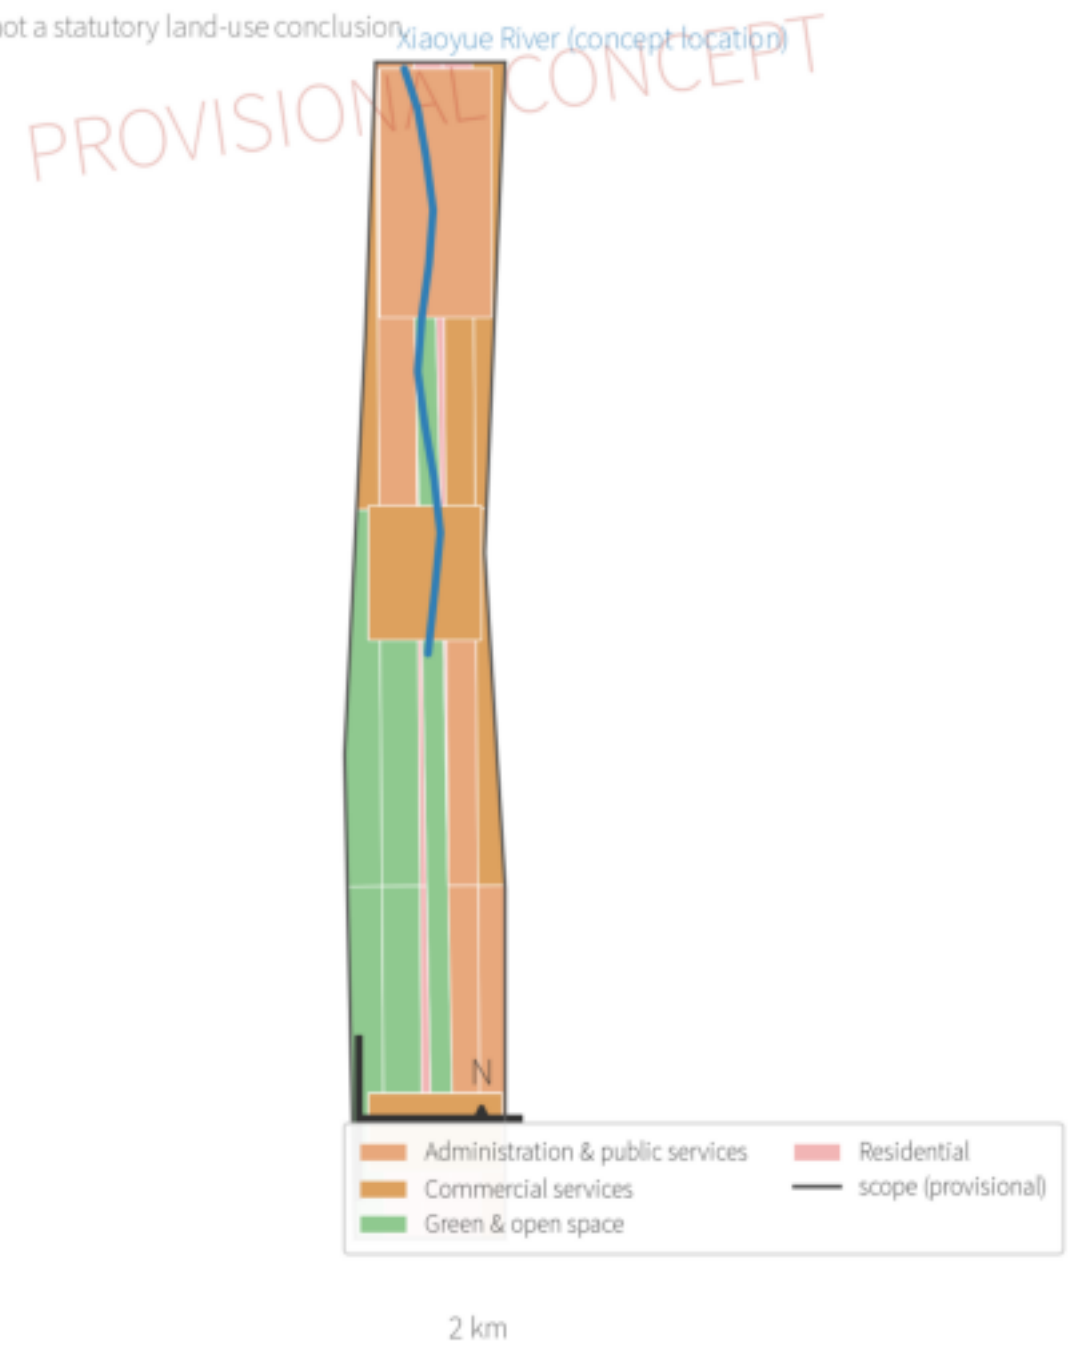

Overall Design Overview: One Belt, Three Segments, Multiple Nodes (provisional)

Station names are real; positions are conceptual; base geometry from package layers.

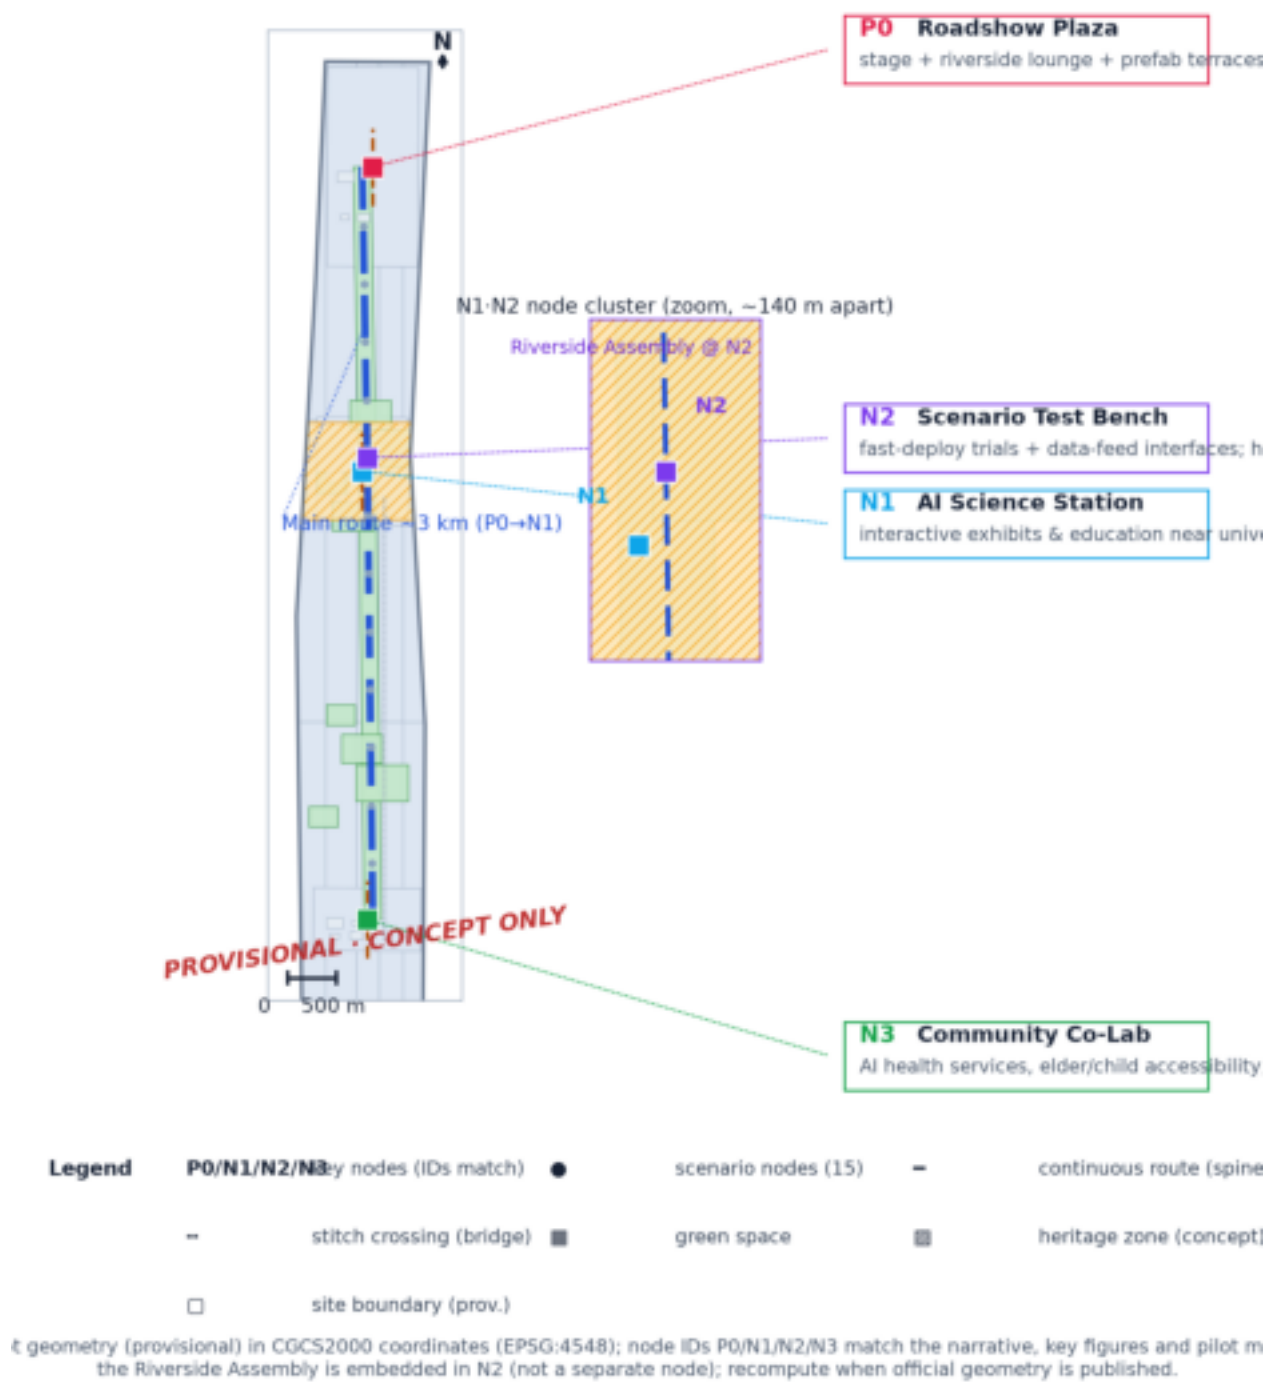

Land-use structure (concept): 23 zones (land_use.geojson)

Codes follow the national land-use classification guide; not a statutory land-use conclusion.

Areas Index: Plaza P0 + Nodes N1/N2/N3 (continuous experience route)

Land Use Structure & Renewal (concept)

Retain-first, renovate-first, demolish-last; land-use codes follow the national classification; not statutory land-use conclusions

■ Zones: 23 concept zones in land_use.geojson (land_use_zone_count=23)

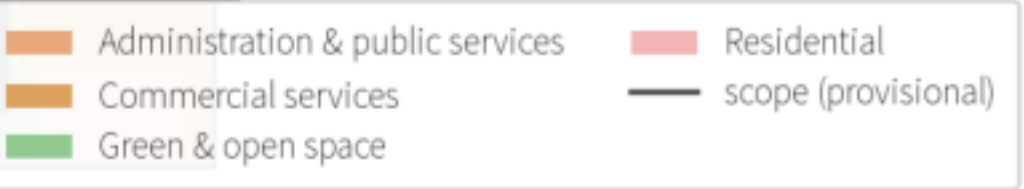

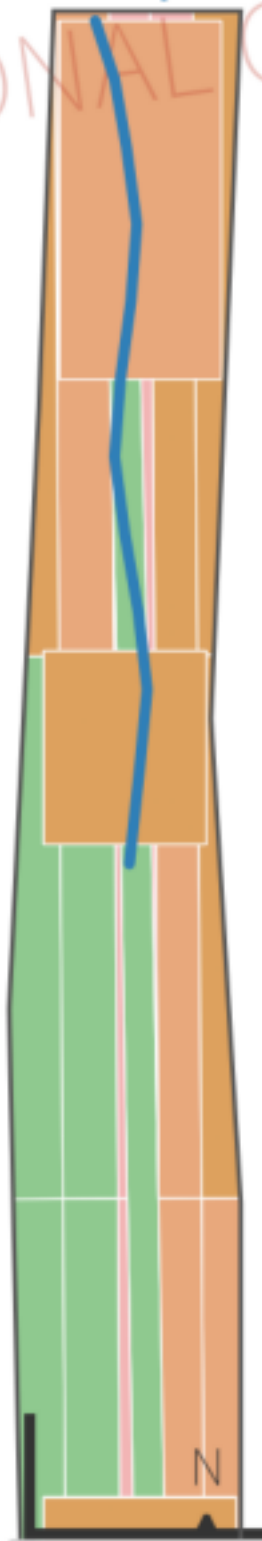

■ Buildings: 12 concept reuse-first envelopes

Land-use structure (concept): 23 zones (land_use.geojson)

Codes follow the national land-use classification guide; not a statutory land-use conclusion

Xiaoyue River (concept location)

PROVISIONAL CONCEPT

2 km

Key Areas Detail: one plaza + three nodes (P0/N1/N2/N3)

Node IDs unified in narrative, figures and matrices;
Riverside Assembly embedded in N2

P0 Roadshow Plaza: stage + riverside lounge + prefab terraces + waterfront rest (~1.0–1.5 ha)

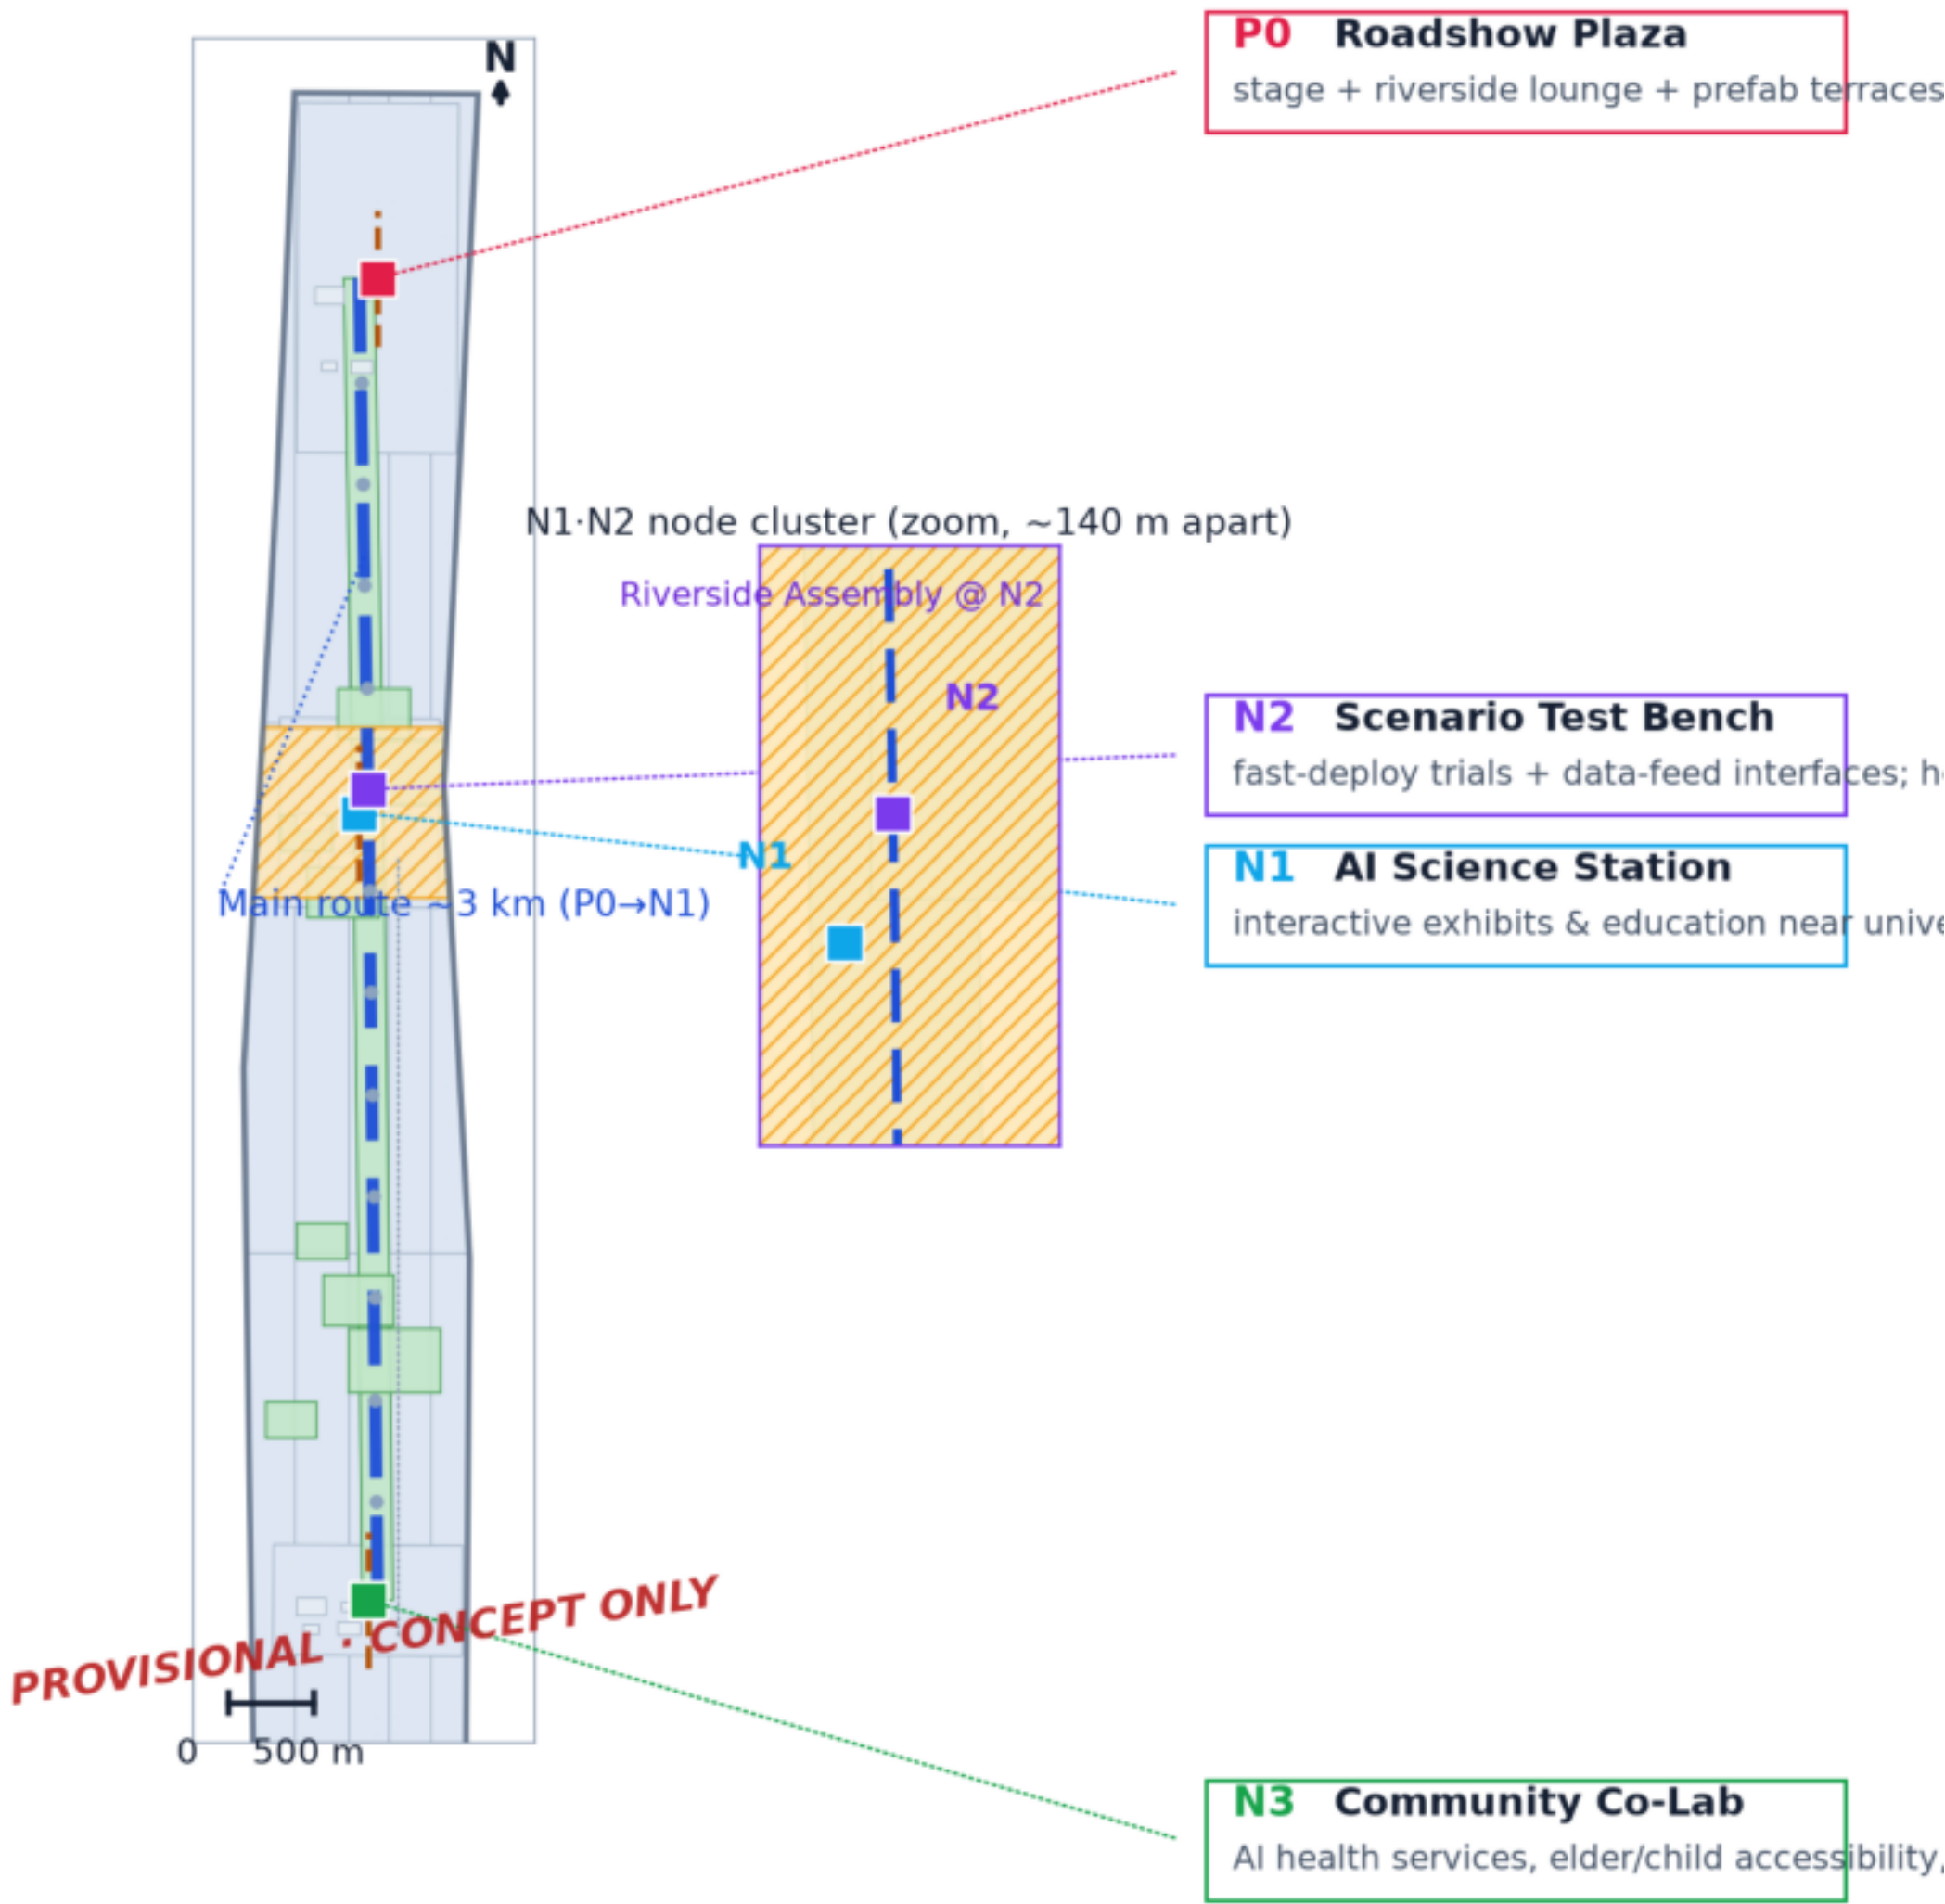

N1 AI Science Station: interactive exhibits + education (near university/school routes)

N2 Scenario Test Bench: fast-deploy trials + data-feed interfaces (under-bridge/backland voids)

N3 Community Co-Lab: AI health services + elder/child accessibility + offline human-fallback posts

N1/N2/N3 combined ~0.8–1.2 ha; each node 600–1200 m² floor area, lightweight steel, dismountable

/ Areas Index: Plaza P0 + Nodes N1/N2/N3 (continuous experience rou

Legend	P0/N1/N2/N3	Key nodes (IDs match)	●	scenario nodes (15)	—	continuous route (spine)

□	site boundary (prov.)					

it geometry (provisional) in CGCS2000 coordinates (EPSG:4548); node IDs P0/N1/N2/N3 match the narrative, key figures and pilot m the Riverside Assembly is embedded in N2 (not a separate node); recompute when official geometry is published.

Concept proposal · Center of Jiaxing Zhang AI Innovation Belt (Huzhou) · scenario wing of the one-belt three wings structure

Pilot Implementation & Data Governance Matrix (concept)

Pre-review checks (flood control / hydrology / blue line / regulatory plan) must be completed by professional designs on official data

Pilot	Current baseline	Pre-review checks	Suggested lead	Stage exit threshold
P0 Roadshow Plaza	open hinterland, good water access	flood/hydrology/blue line/fire	govt coordination + operator	review after 2-year trial
N1 Science Station	near university & school routes	land use/accessibility/fire	university alliance + operator	rotate after annual review
N2 Test Bench	under-bridge & backland voids	structural/municipal access	platform company + enterprises	project-based exit
N3 Co-Lab	old-community gateway	accessibility/noise/fire	community + operator	adjust after resident review

Data governance bottom line (A-PRIVACY-001)

■ Anonymised aggregation only: raw individual data never leaves the collection point; no individual-identifying tracking

■ Human review: sensitive conclusions and alerts are published after human approval; appeal, deletion and manual termination available
