

CRAFT-JZ AI MAKER FOUNDRY NETWORK

Three zones, two wings, an AI maker ecosystem, and an open testbed / concept proposal, reference scheme, provisional

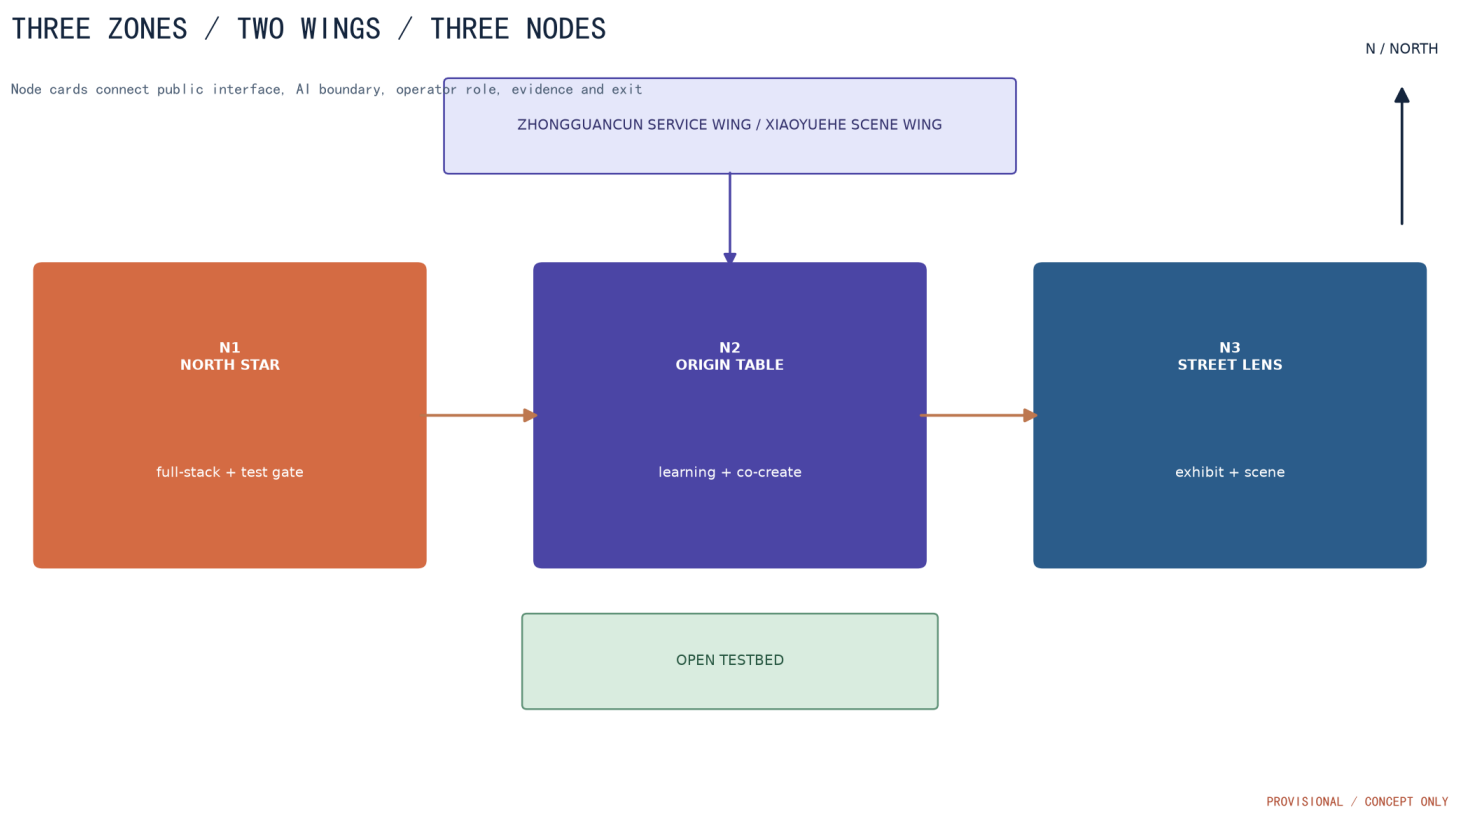

Official boundary, cooperation, approvals, funding, ownership, trademarks, and real-world data are not fabricated; this is not statutory planning, engineering, or an implementation commitment.

Theme	Evidence	Boundary
Three positions and five functions	The Centennial Jing-Chang Culture Belt carries history and public narrative; the Urban AI Everyday Experience Belt provides understandable, withdrawable services; the AI-Integrated Innovation Belt provides low-risk open testing. Five functions land in full-stack prototyping, open testing, inclusive co-creation, public exhibition, and annual operations.	concept / provisional / human review
Three zones, two wings, and three nodes	R1 Speed-Making Nexus hosts the full-stack toolchain and maker safety; R2 Origin Workshop hosts youth learning, resident co-creation, and staffed access; R3 Street Lab hosts understandable exhibition and some tests. The Zhongguancun Technology Service Wing and XiaotuoYe Scenario Enablement Wing are interfaces to verify.	concept / provisional / human review
Scenes and test protocols	Twelve 501-512 cards cover booking, tools, courses, mentors, accessibility, history, interpretation, exhibition, merchants, anonymous feedback, the testbed, and volunteers. 101-104 cover benchmarks, data quality, staffed runtime, and reversible making.	concept / provisional / human review
Spatial-AI-operations loop	A space card defines access, an AI card defines minimal services and the human gate, an operations card defines staffing, notice, and appeal, an evidence card records agreements, a forum card reviews, and an exit card pauses the prototype when risk, ownership, funding, or baselines change.	concept / provisional / human review
Phasing and boundaries	P0 near term 1-3 years establishes rules, paper routes, and low-risk prototypes; P1 mid term 3-5 years proposes a limited test after written permission; P2 long term 5-10 years discusses a network only when official data, ownership, approvals, funding, and operating evidence are available. All such facts remain provisional, to verify, or unknown.	concept / provisional / human review

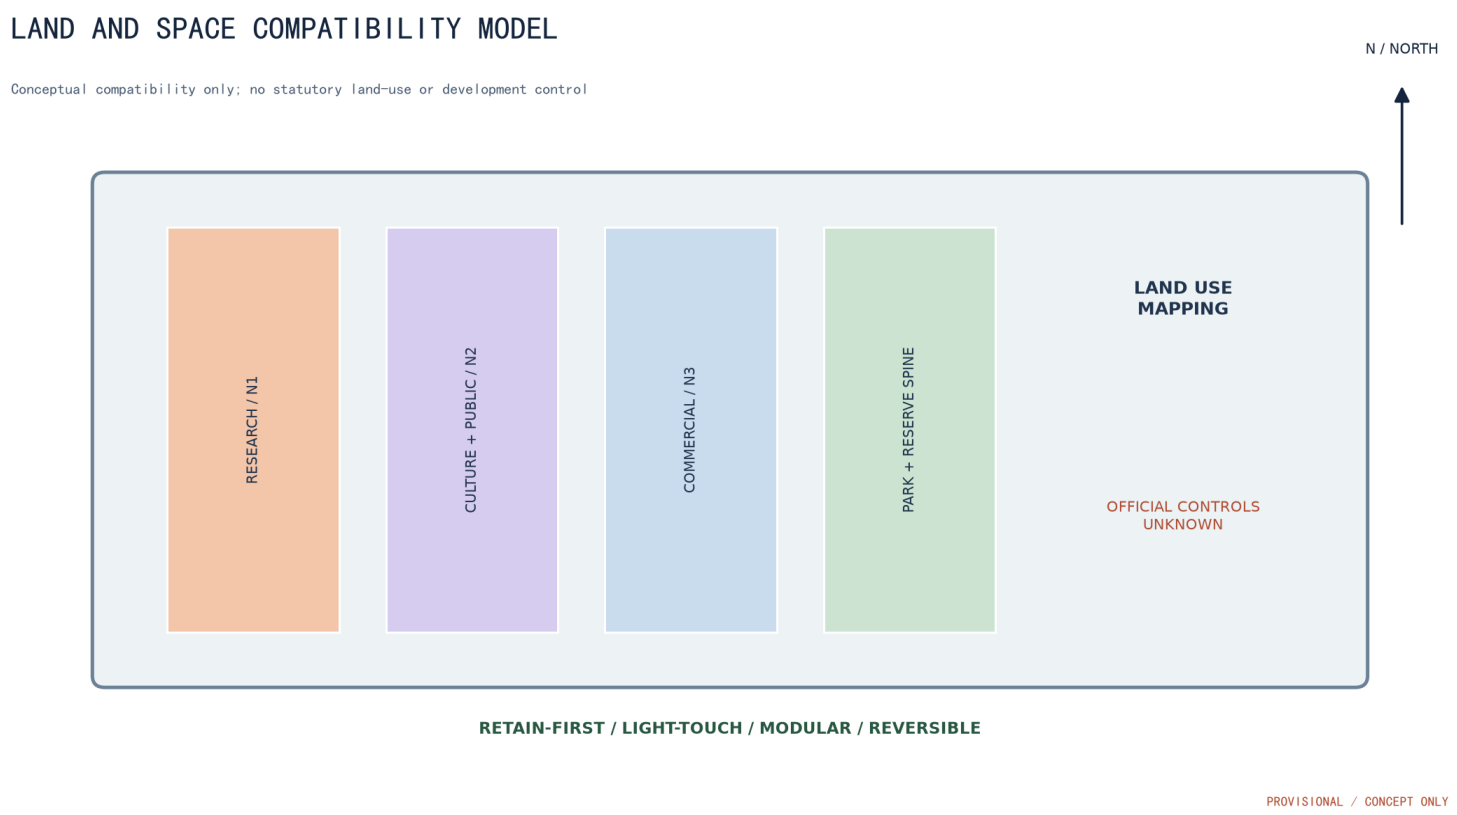

Three positions and five functions

The Gentennial Jing-Zhang Culture Belt carries history and public narrative; the Urban AI Everyday Experience Belt provides understandable, withdrawable services; the AI-Integrated Innovation Belt provides low-risk open testing. Five functions land in full-stack prototyping, open testing, inclusive co-creation, public exhibition, and annual operations.

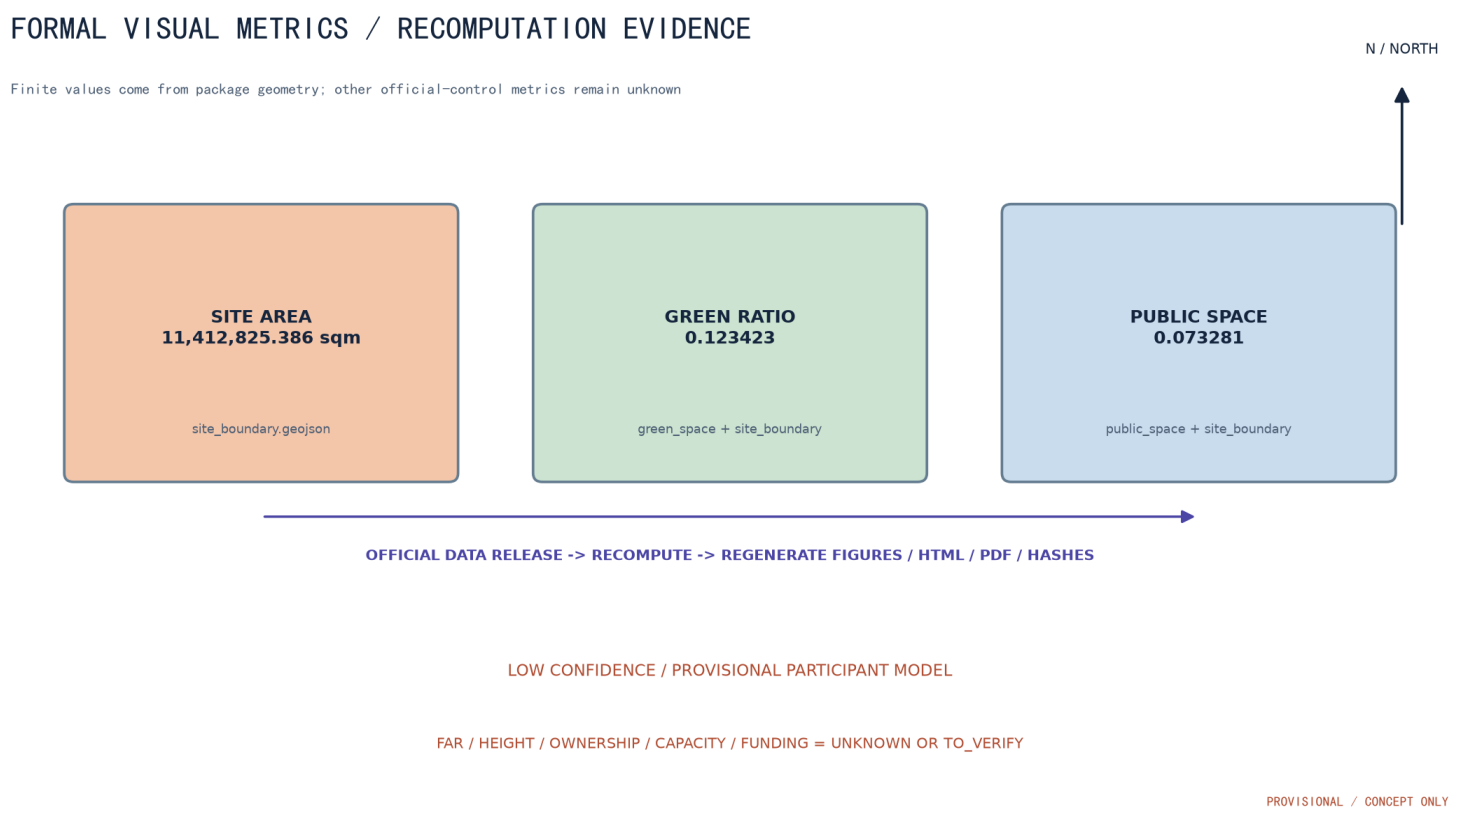

Three zones, two wings, and three nodes

N1 Speed-Making Nexus hosts the full-stack toolchain and maker safety; N2 Origin Workshop hosts youth learning, resident co-creation, and staffed access; N3 Street Lab hosts understandable exhibition and scene tests. The Zhongguancun Technology Service Wing and Xiaoyuehe Scenario Enablement Wing are interfaces to verify.

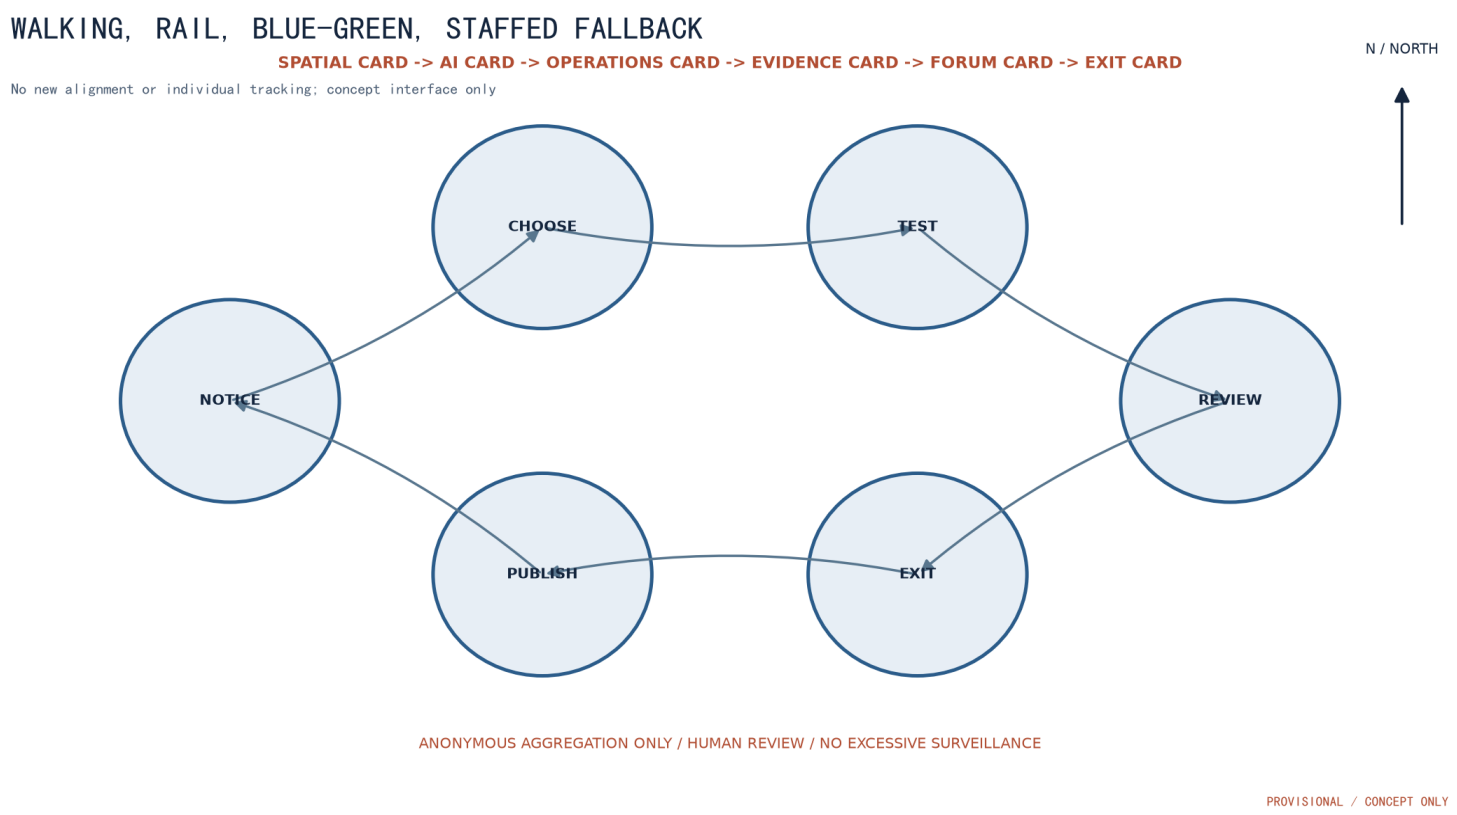

Scenes and test protocols

Twelve 501-512 cards cover booking, tools, courses, mentors, accessibility, history interpretation, exhibition, merchants, anonymous feedback, the testbed, and volunteers. T01-T04 cover benchmarks, data quality, staffed runtime, and reversible making.

Spatial-AI-operations loop

A space card defines access, an AI card defines minimal service and the human gate, an operations card defines staffing, notice, and appeal, an evidence card records aggregates, a forum card reviews, and an exit card pauses the prototype when risk, ownership, funding, or base lines change.

Phasing and boundaries

P0 near term 1-3 years establishes rules, paper routes, and low-risk prototypes; P1 mid term 3-5 years proposes a limited test after written permission; P2 long term 5-10 years discusses a network only when official data, ownership, approvals, funding, and operating evidence are available. All such facts remain provisional, to verify, or unknown.
