Slow mobility and blue-green analysis (~3 km spine, provisional)

PROVISIONAL boundary, not an official redline, recalculate after official data

Slow mobility

~3 km continuous walk and cycle trail
(concept main path)
Gaps removed; under-bridge spaces become passages and stops
5-10 min feeder links to rail stations
(concept)
Shared bikes and remote parking at corridor ends

Blue-green and ecology

Classified bank naturalisation
(ecological/living/roadshow segments)
Wetland purification, sponge stormwater, separated sewers
Native trees retained, shade trees added
Flood/water-level/blue-line checks are pre-review items, no conclusion prejudged

Per-metric calibre, source, formula, confidence, trigger
Calibre (consistent with metrics.json; shown rounded):
Green ratio = concept green area / site area (EPSG:4548) c.18.2%; public-space ratio c.0.8%
Counts: landmarks 3 / scenario nodes 15 / key areas 3 / phases 3 / personas 5 / cases 7 / events 5 / tests 3 / zones 23
Confidence: ratios low (concept geometry); counts high (layers and text counts)
Recalculation trigger: after official boundary, land-use, public-space and rail data release
Use limit: concept display and review; not a budget or engineering-feasibility basis

All metrics are concept-scale and shown rounded; ratio and count panels are separated; full recalculation after official data release.
