

Soundscape Loop: Jing-Zhang Soundscape Memory & Acoustic Environment Design (Concept)

A3 booklet • concept (provisional)

PROVISIONAL boundary • not an official red line • recompute when official data is published

SND • JZ Soundscape Loop

Jing-Zhang Soundscape Memory & Acoustic Environment Design (Concept)

Primary name: Soundscape Loop (SND • JZ)

Structure: Memory Hall — Quiet Listening Path — Soundscape Theater (One Hall, One Path, One Belt)

Scope (announcement caliber): coordinated $\approx 43.6 \text{ km}^2$ / overall $\approx 11.4 \text{ km}^2$ / key areas $\approx 368.4 \text{ ha}$

Contents: six evidence sheets + core metric notes; all concept suggestions based on provisional boundaries, recomputed after official data release.

Fig.1 Overall design overview: one hall, one path, one belt, three nodes (provisional)

PROVISIONAL boundary • not an official red line • recompute when official data is published

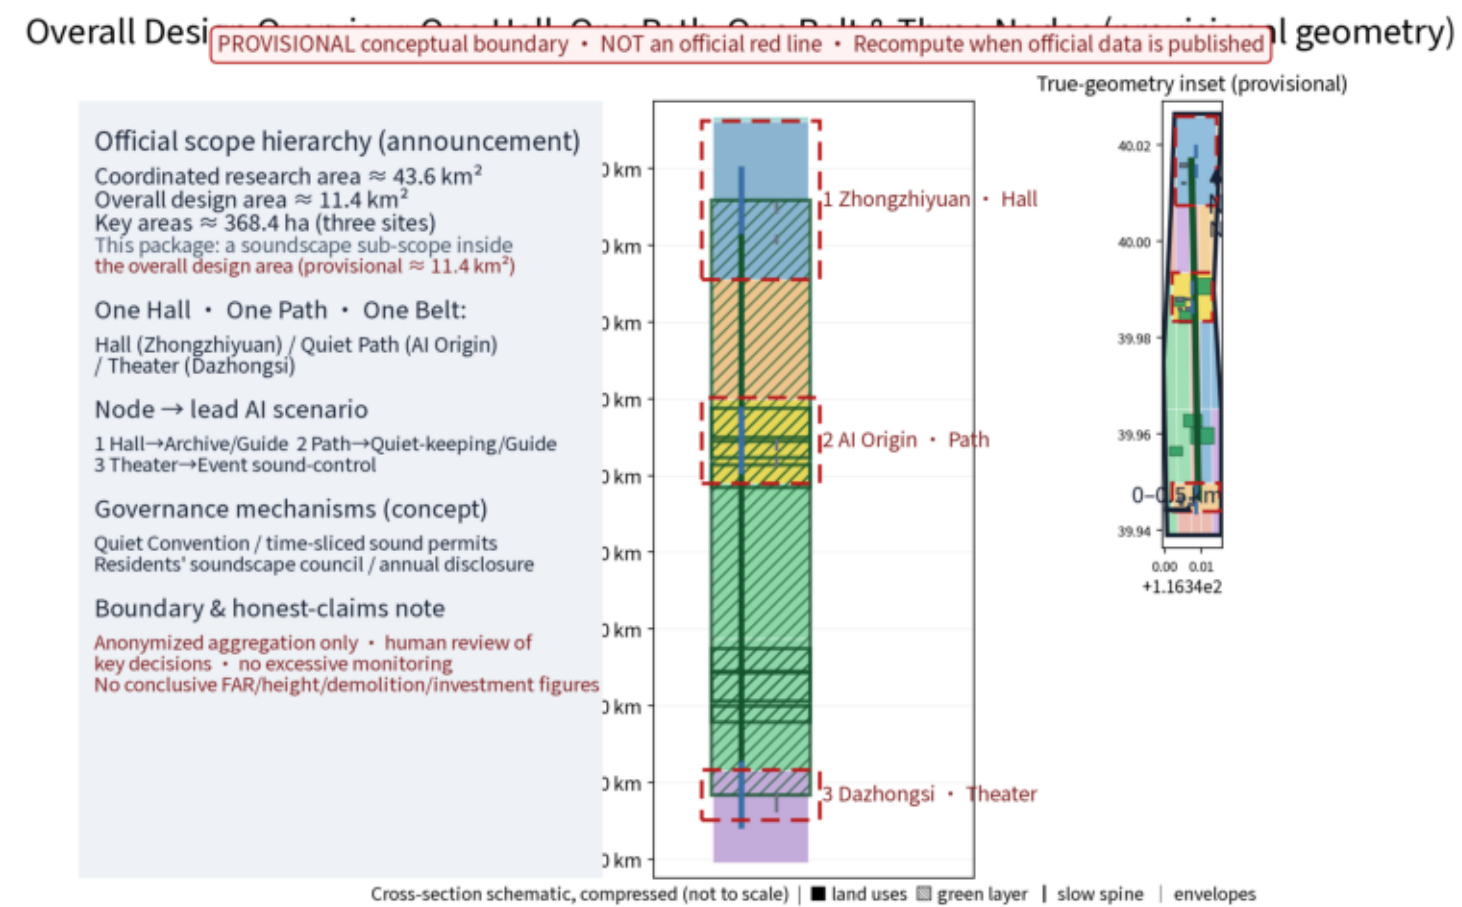

Fig.2 Key areas detail: three node zooms and component layouts (concept)

PROVISIONAL boundary • not an official red line • recompute when official data is published

Key Areas Detail: Three Node Zooms and Component Layouts (provisional concept)

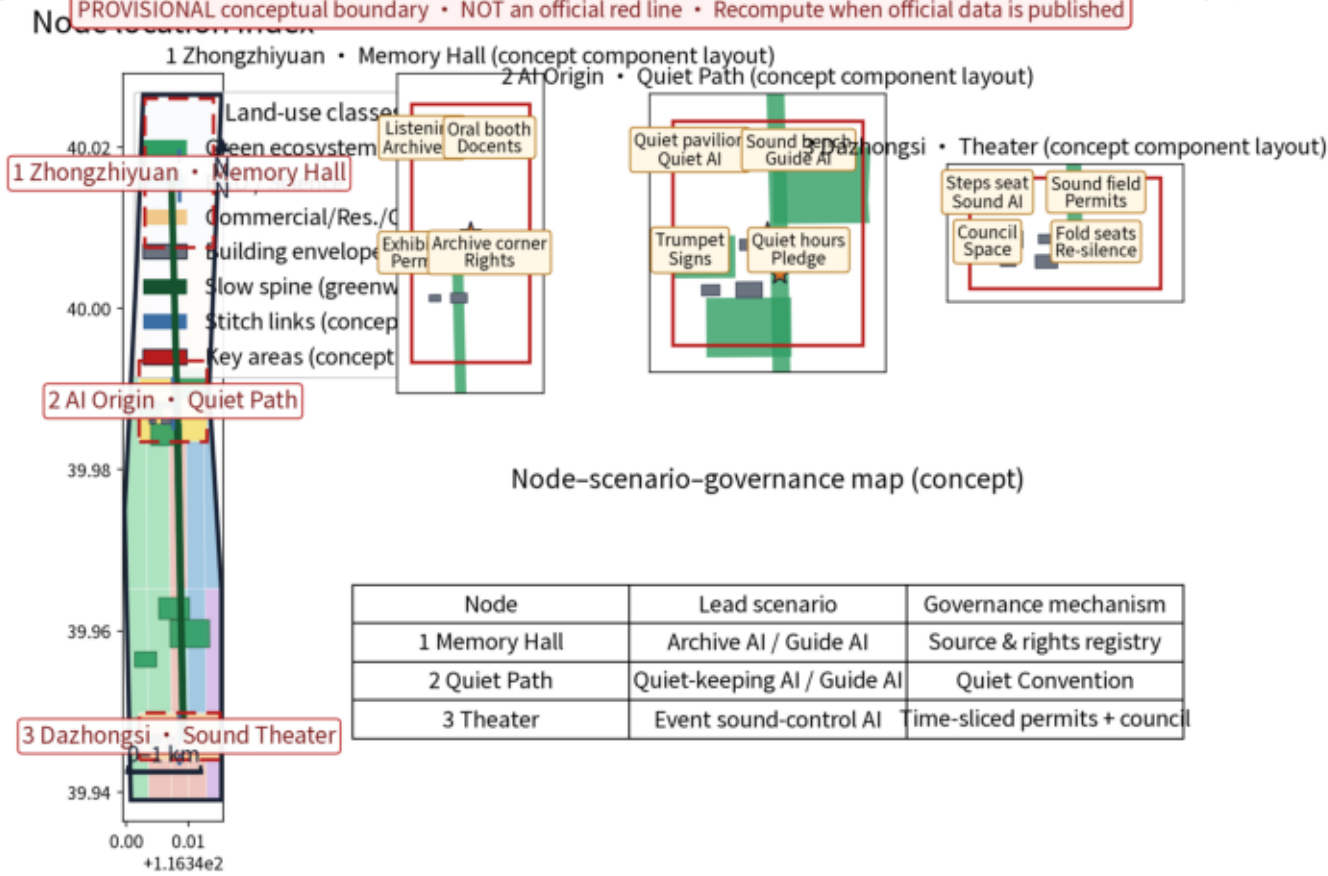

Fig.3 Conceptual land structure: single land-use caliber (% of provisional total area)

PROVISIONAL boundary • not an official red line • recompute when official data is published

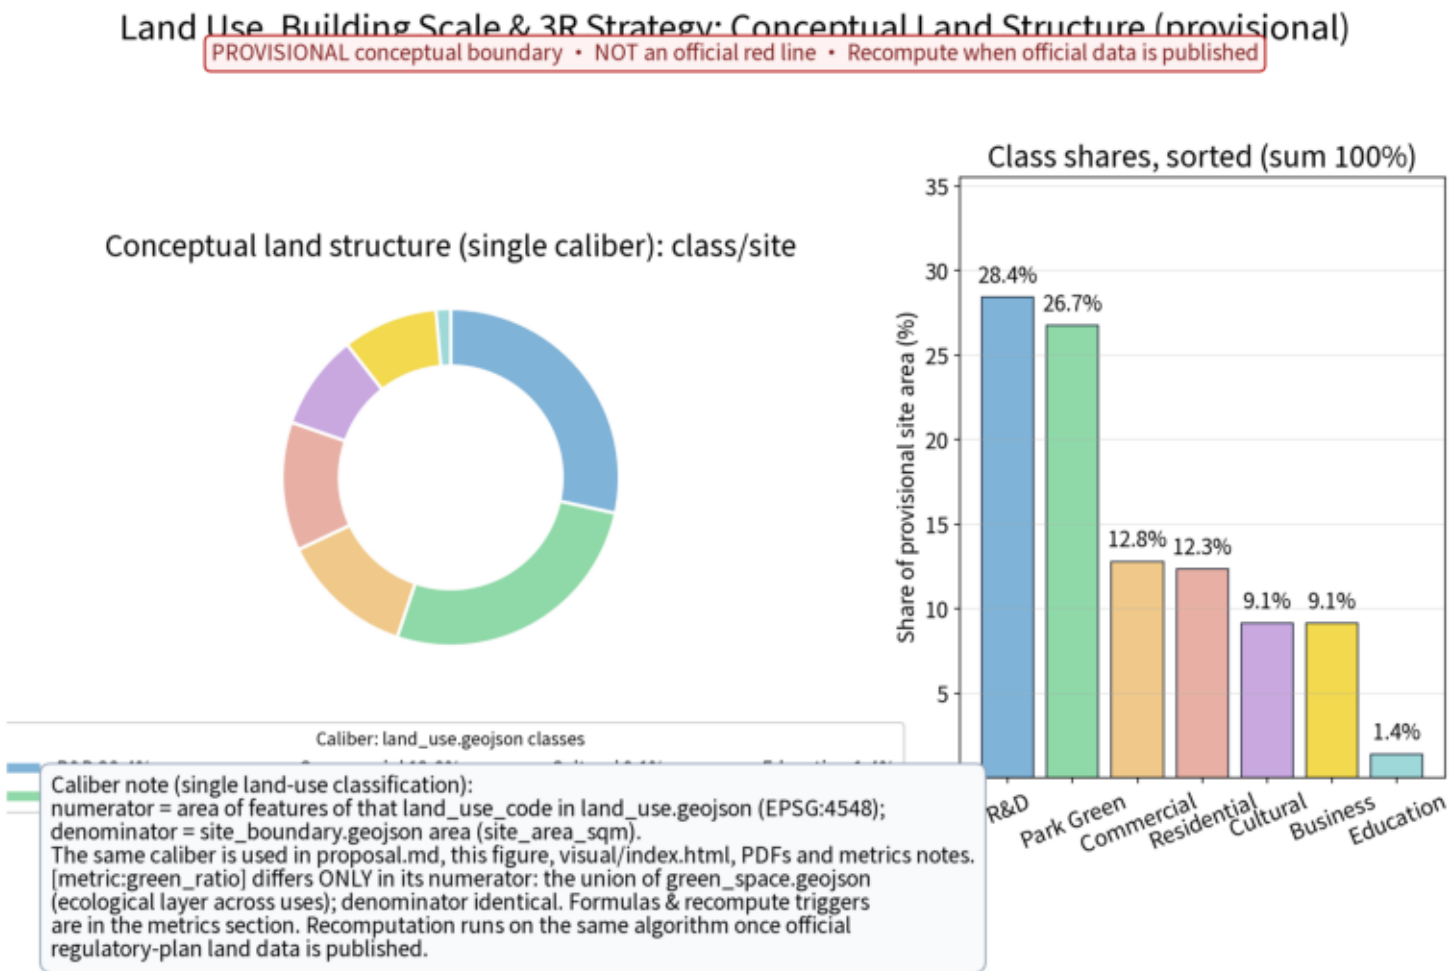

Fig.4 Slow-mobility & blue-green continuity: quiet spine, quiet zones, component library (concept)

PROVISIONAL boundary • not an official red line • recompute when official data is published

Blue-Green Belt's Core & Cluster's Slow-Mobility Continuity Evidence (provisional)
PROVISIONAL conceptual boundary • NOT an official red line • Recompute when official data is published

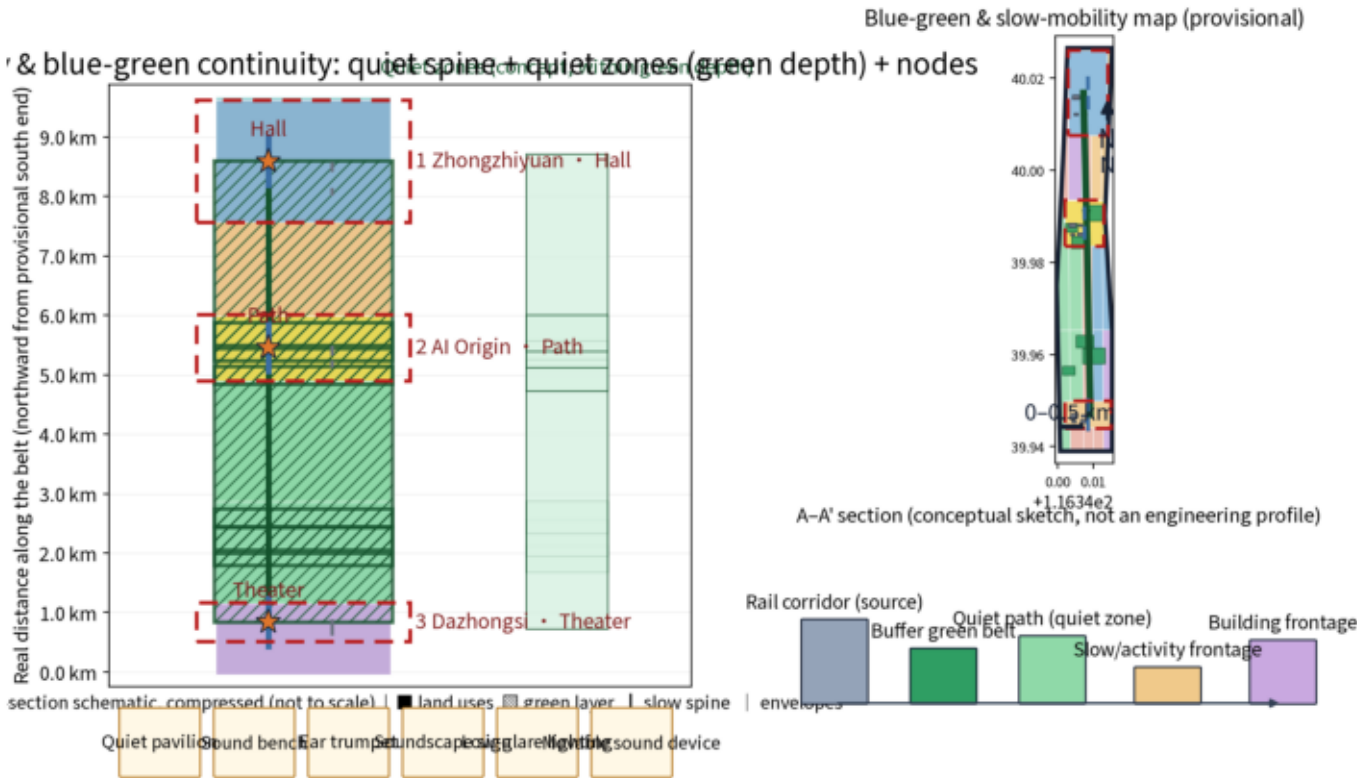

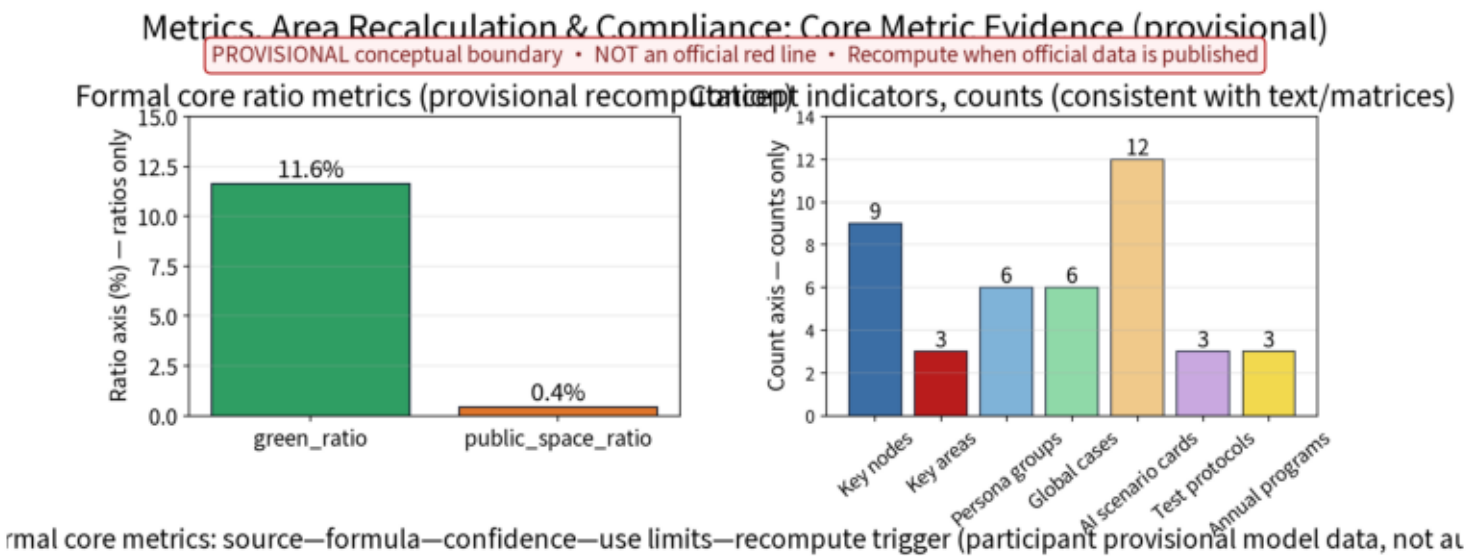

Fig.5 Core metric evidence: ratios and counts on separate axes; formula, confidence, recompute trigger

PROVISIONAL boundary • not an official red line • recompute when official data is published

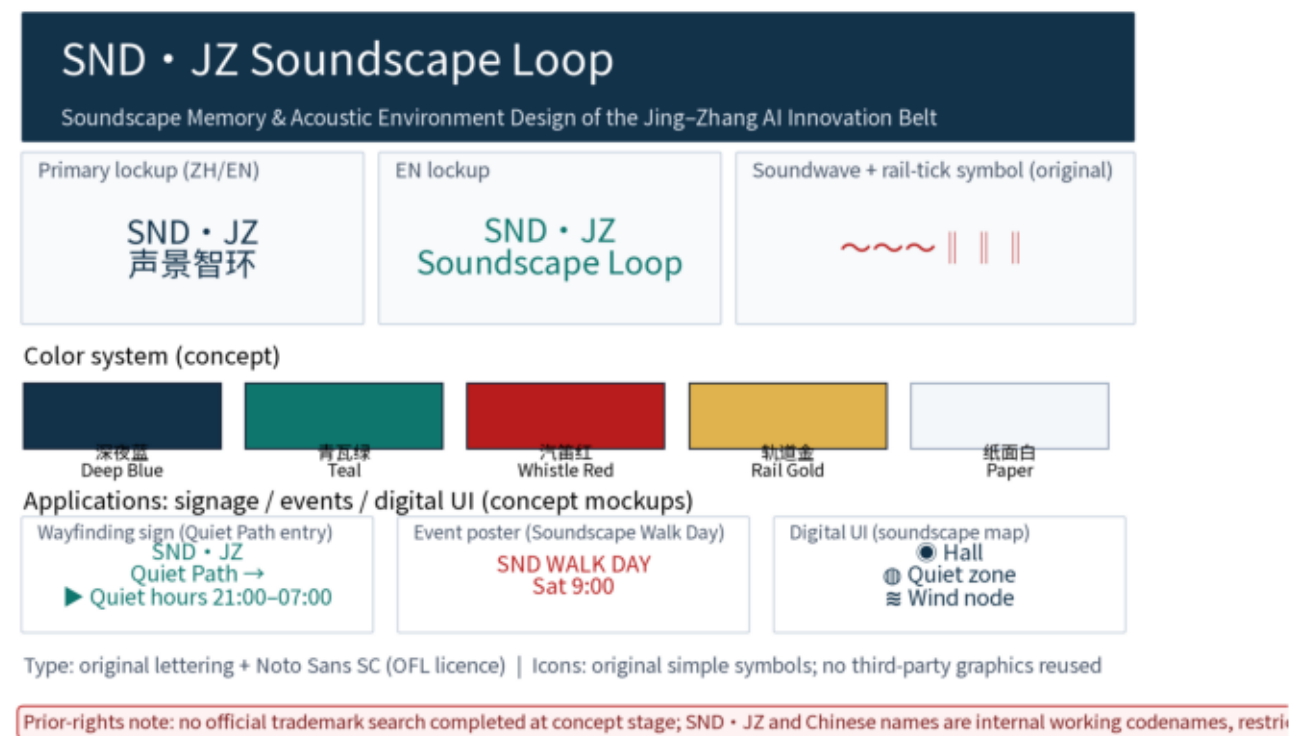

Metric	Formula (EPSG:4548)	Confidence	Recompute trigger
site_area_sqm	area of provisional site b	medium	replace geometry when official boundi
green_ratio	union(green_space) / sit	low	when official green-space data publish
public_space_ratio	union(public_space) / si	low	when official public-space data publi

Fig.6 SND • JZ brand & logo application board (concept; internal working codename)

PROVISIONAL boundary • not an official red line • recompute when official data is published

SND • JZ Soundscape Loop — Brand & Logo Application Board (concept)

Core metrics & recompute notes (concept)

Participant provisional model data, not authoritative; recomputed by the same formulas after official data release

Metric	Formula (EPSG:4548)	Confidence	Recompute trigger
site_area_sqm	area of provisional site boundary polygon	medium	replace geometry when official boundary is published
green_ratio	$\text{union}(\text{green_space}) / \text{site_area_sqm}$	low	when official green-space data is published
public_space_ratio	$\text{union}(\text{public_space}) / \text{site_area_sqm}$	low	when official public-space data is published
Land-use shares	each land_use_code area / site_area_sqm (sum 100%)	low	when official regulatory-plan land data is published

Caliber note: green_ratio = union(green_space) / site area; public_space_ratio = union(public_space) / site area.
Ratio and count metrics are charted on separate axes, never shared; provisional values shown rounded.
