

CRAFT-JZ AI MAKER FOUNDRY NETWORK

Open testbed, 12 scene cards, T01-T04 test protocols, and reversible operations

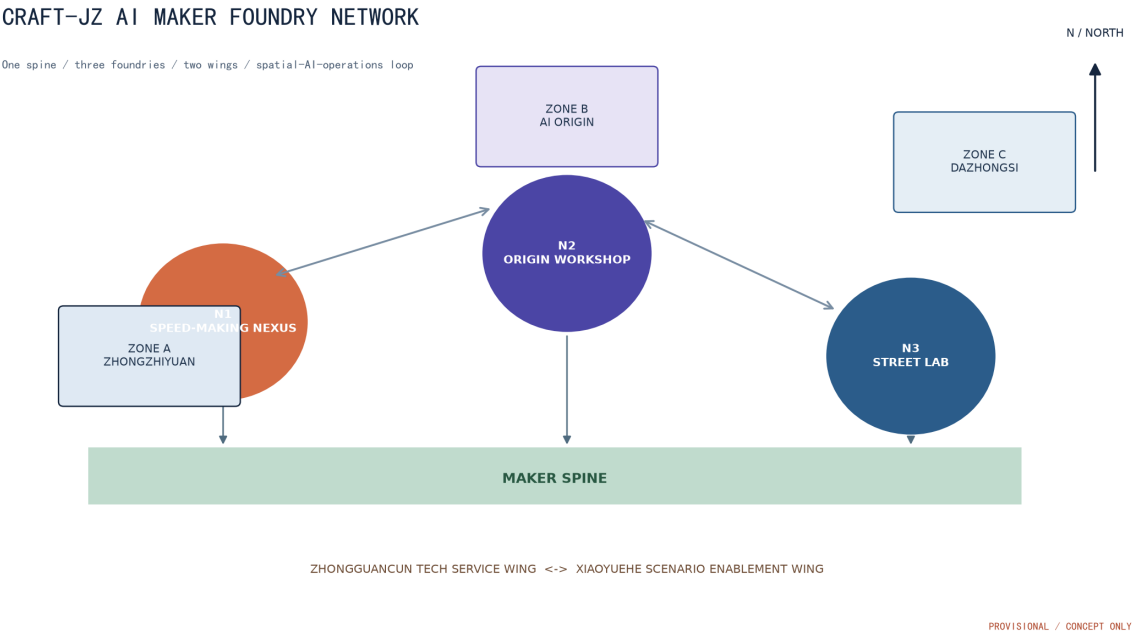

PROVISIONAL / concept proposal.

PACKAGE-AUTHORED WORKING MARK / TRADEMARK TO_VERIFY

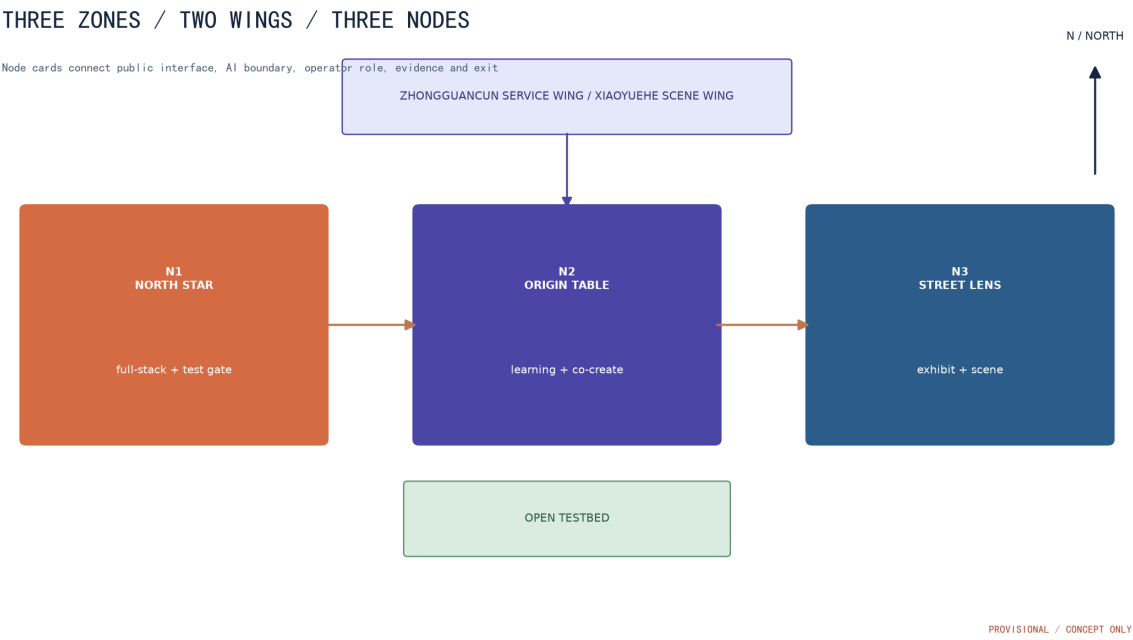

Three positions, five functions, three zones and two wings

The proposal organizes space as one spine, three foundries and two wings. N1 Speed-Making Nexus, N2 Origin Workshop and N3 Street Lab form the maker network; the two wings provide interfaces to verify.

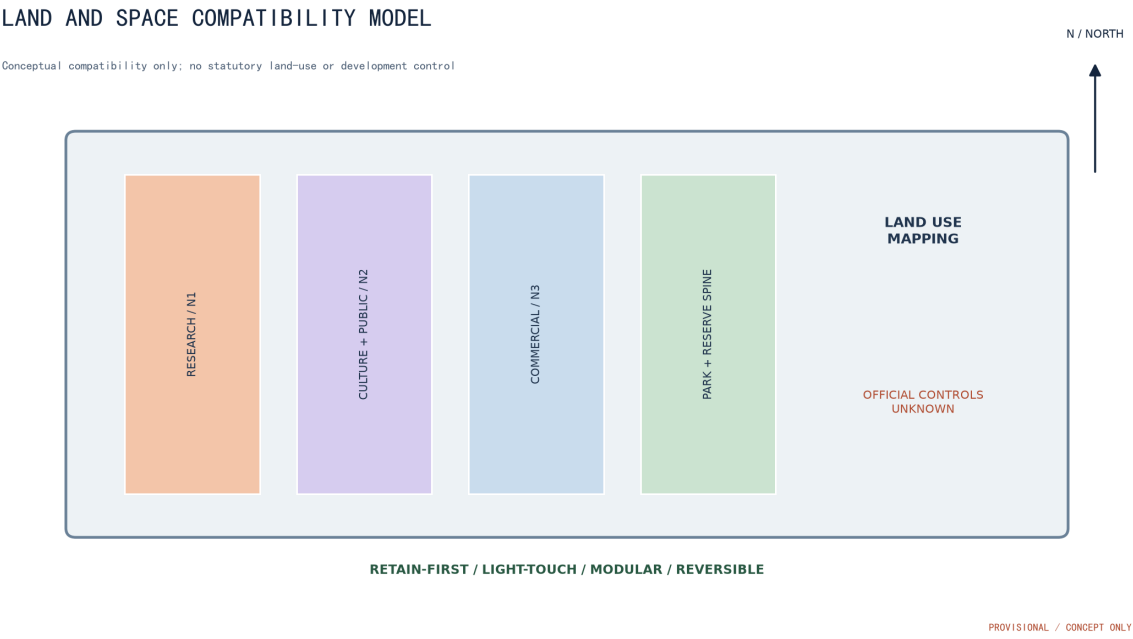

Three positions and five functions

The Centennial Jing-Zhang Culture Belt carries history and public narrative; the Urban AI Everyday Experience Belt provides understandable, withdrawable services; the AI-Integrated Innovation Belt provides low-risk open testing. Five functions land in full-stack prototyping, open testing, inclusive co-creation, public exhibition, and annual operations.

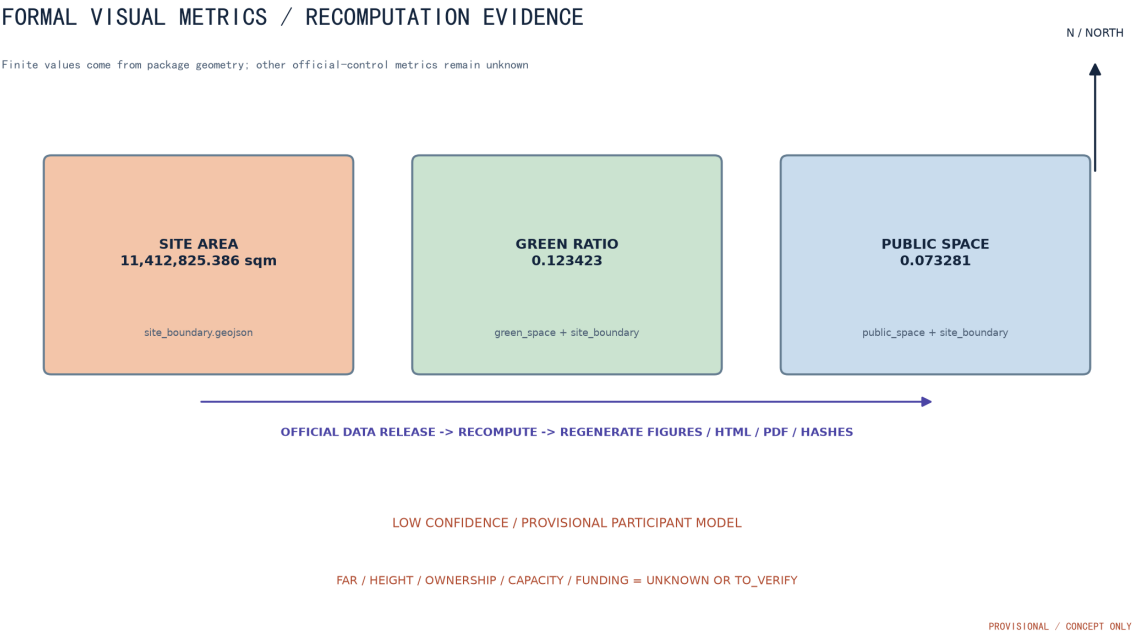

Three zones, two wings, and three nodes

N1 Speed-Making Nexus hosts the full-stack toolchain and maker safety; N2 Origin Workshop hosts youth learning, resident co-creation, and staffed access; N3 Street Lab hosts understandable exhibition and scene tests. The Zhongguancun Technology Service Wing and Xiaoyuehe Scenario Enablement Wing are interfaces to verify.

Scenes and test protocols

Twelve S01-S12 cards cover booking, tools, courses, mentors, accessibility, history interpretation, exhibition, merchants, anonymous feedback, the testbed, and volunteers. T01-T04 cover benchmarks, data quality, staffed runtime, and reversible making.

Phasing and boundaries

P0 near term 1–3 years establishes rules, paper routes, and low-risk prototypes; P1 mid term 3–5 years proposes a limited test after written permission; P2 long term 5–10 years discusses a network only when official data, ownership, approvals, funding, and operating evidence are available. All such facts remain provisional, to_verify, or unknown.
