

Overview: One Line, Three Areas

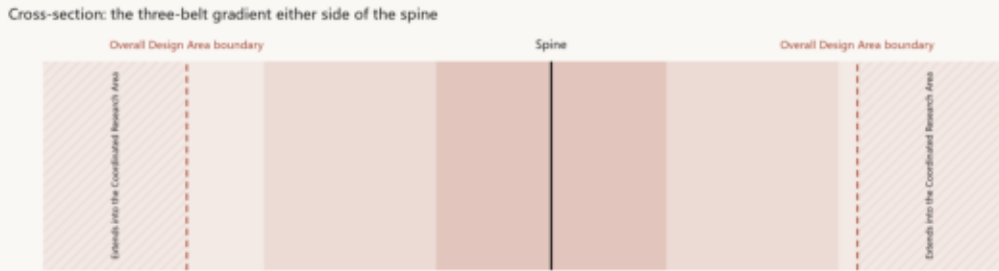

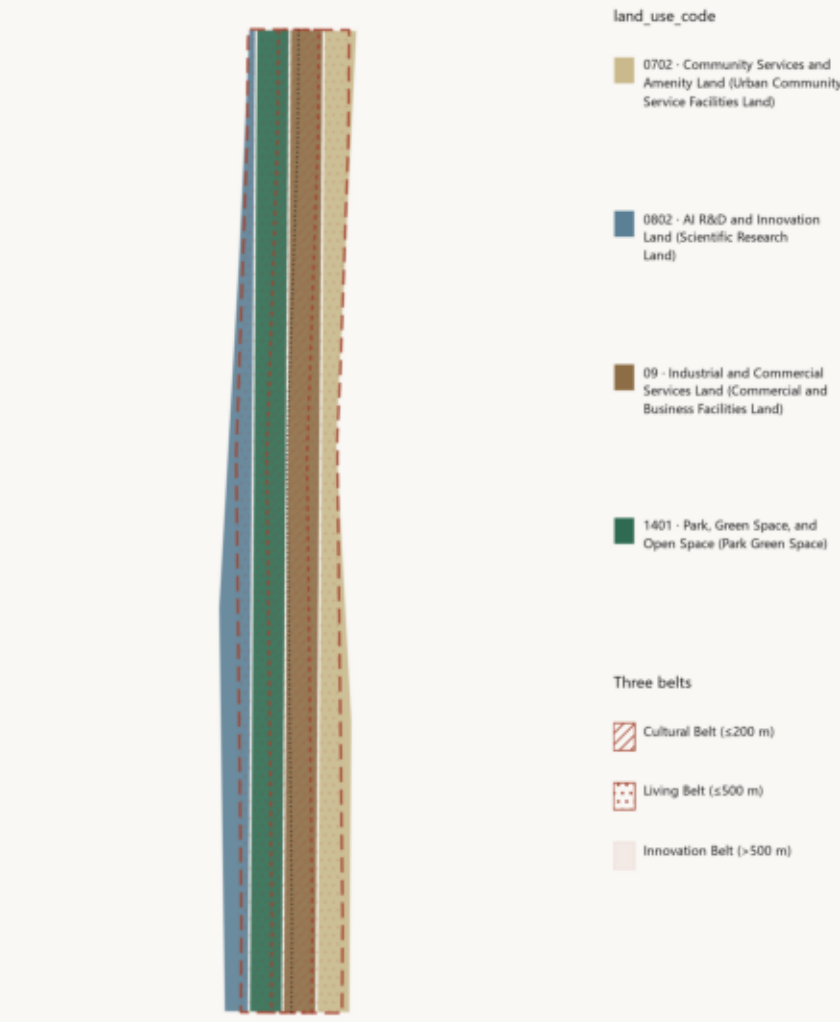

Overview: One Line, Three Areas
Coordinated research 43.6 km² · Overall design 11.4 km² · Key areas 368.4 ha

The boundary is a provisional substitute; official coordinates are unpublished. Areas are recomputed from submitted geometry, except the coordinated research scope (see above).

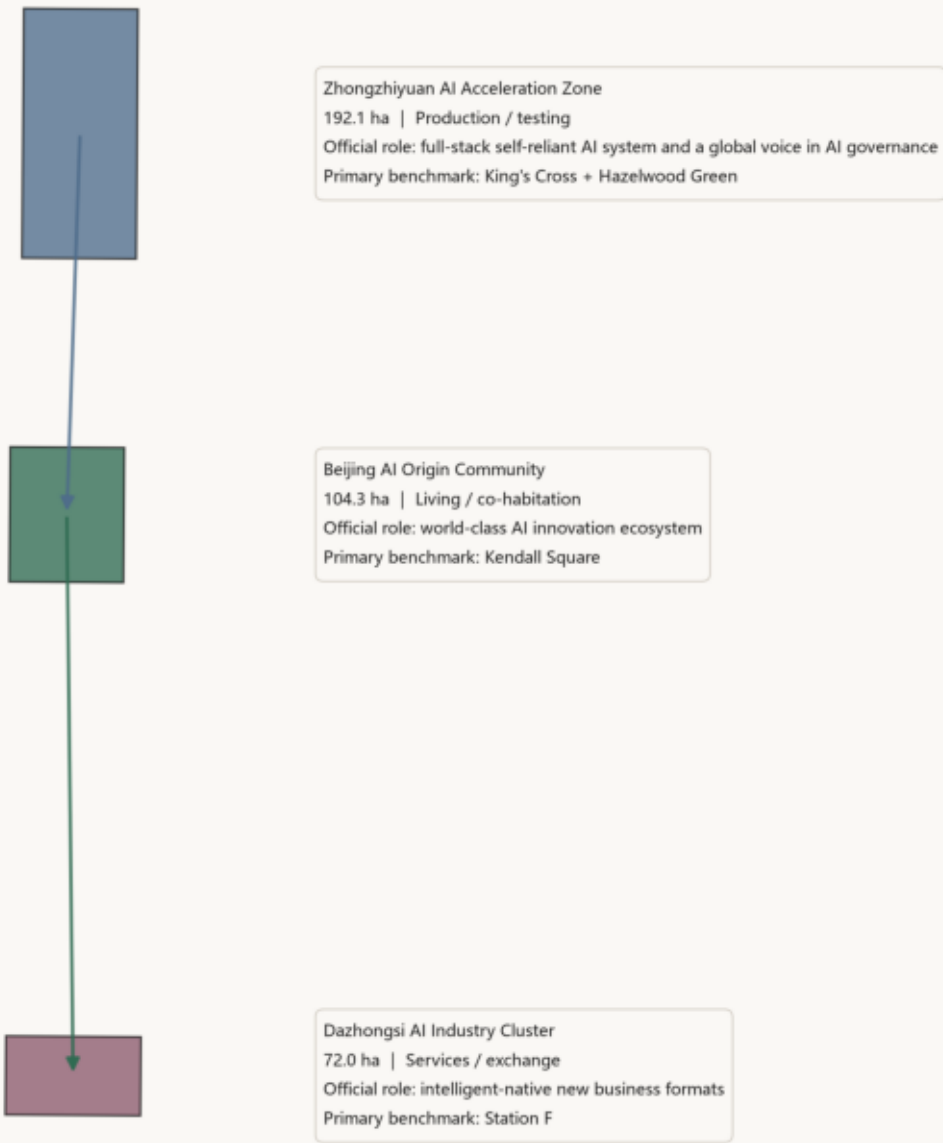

Land Use Structure and the Three Gradients

Land Use Structure and the Three Gradients
The three belts radiate outward from the heritage line; they are not parallel

Three Key Areas: Three Modes of Contact Between AI and the City

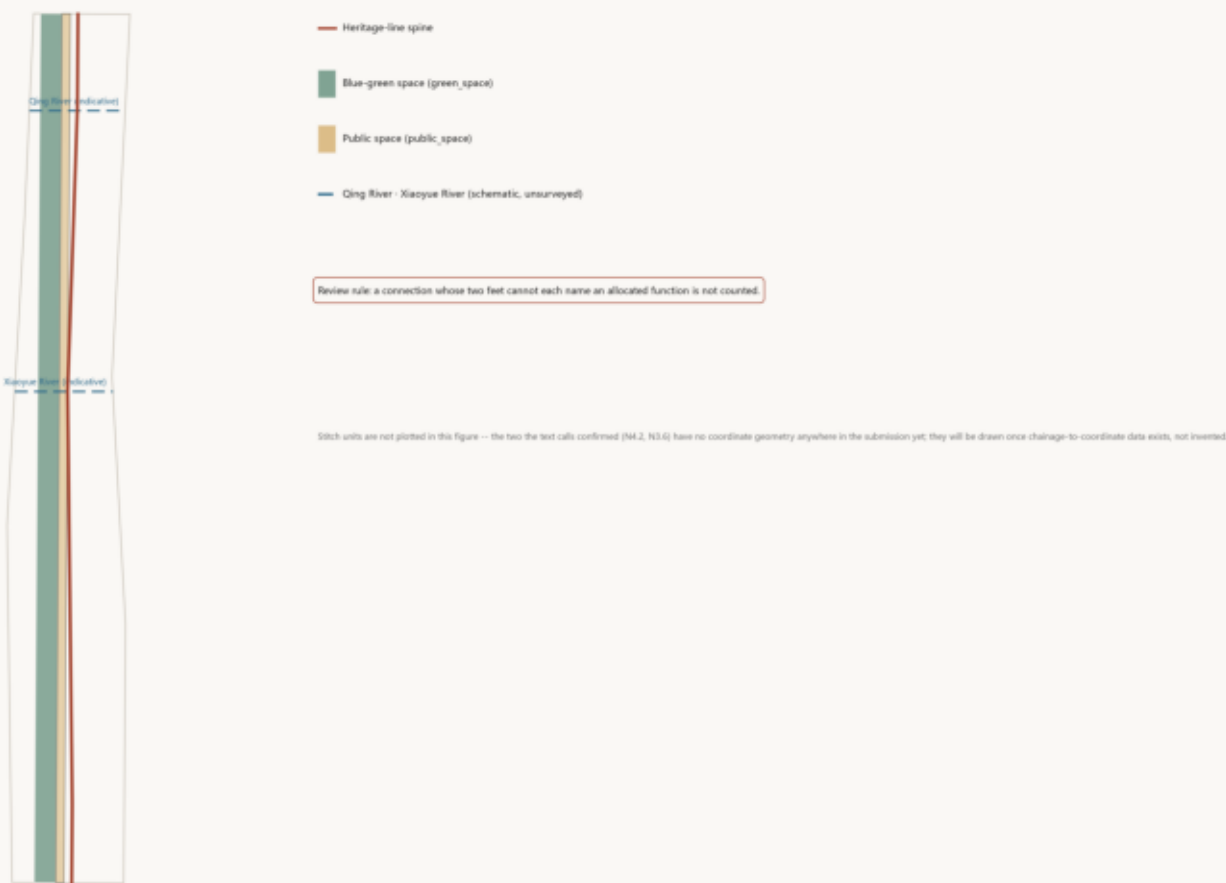

Three Key Areas: Three Modes of Contact Between AI and the City

Areas shown are official published figures. The mapped boundary is a provisional substitute; recomputed areas differ from the published values.

Mobility & Blue-Green Public Space

The Stitching System and the Blue-Green Frame
Two horizontal, one vertical, every stitch with two feet must send a function

The Qing River and Xiangpu River are shown schematically, unsubmitted geometry.
The boundary is a provisional substitute; official coordinates are unpublished.

Core Metric Recalculation & Evidence Chain

Metrics Evidence: What Is Computed and What Is Honestly Unknown

Class A is recomputed from geometry; Class B is a proposal commitment

Field	Source	Method	Current value
site_area_sqm	geometry/site_boundary.gpkg	polygons_area(identified_site_boundary)	11,412,825 m²
building_footprint_area_sqm	geometry/buildings.gpkg	sum(polygons_area(building_footprints))	310,807 m²
green_ratio	geometry/green_space.gpkg geometry/site_boundary.gpkg	green_space_area_sqm / site_area_sqm	0.204
public_space_ratio	geometry/public_space.gpkg geometry/site_boundary.gpkg	public_space_area_sqm / site_area_sqm	0.079
floor_area_ratio	building_packages/changes/ planning_building.gpkg	total_floor_area_sqm / official_site_area_sqm	unknown
key_area_count	geometry/key_areas.gpkg	count(key_detailed_design_areas)	3

Review: Official floor area ratio, height limit, and building density controls are not published for this site. Relying on a number would be fabrication. See assumptions/purpose/CONTROLS-001.

Every Class A value is computed once by the geometry generation script and written to both metrics.gpkg and VisualIndex.html's data value; none is hand-typed.
